Abstract

English in India, today, is a symbol of people's aspirations for quality education and participation in National and International life. In the educational community, students are more addicted to technology than any other thing in the environment. The involvement of the students in the technological world is inseparable and recent developments have come to a finding that teachers need to use technology to be effective while teaching students. Due to the impact and influence of Information Technology on society and education, computer-assisted language teaching is becoming a way for language teaching. The recent pandemic has made every student more of a technological user than the previous times. However, the teacher confronts certain challenges in the English classrooms while training through the existing and upcoming curriculum. It is necessary, especially for English teachers to adopt a suitable technology-based teaching methodology to rise above the challenges confronted. Only with technological aid and suitable methods or tools in the technology, it is possible for teaching to be more effective for the students belonging to the technological world. The students who were exposed to teaching with technological support seem to have improved more than the students who were not exposed to technological tools. Hence in this paper, I have tried to identify, use, and suggest the apt technological tools that can be used by the students' community to impart all four skills Listening, Speaking, Reading, and Writing in the English language.

Keywords: Language, technology, trend, teachers, challenges

INTRODUCTION:

Language has always played an important role in guiding humankind through several stages in the march toward advancement. It has served as the symbol to the extent of intellectual growth. An intriguing study was made by Whorf on the impact of language and how it is reflected in the culture. This has confirmed that the language and thought process are inter-twined even while having independent domains. The method of human communication, either spoken or written, consists of the use of words in a structured and conventional way. Any nonverbal method of expression or communication: "a language of gesture and facial expression".

Technology is an ever-increasing part of the English language classroom. Today's teachers are developing new and exciting means of integrating language, writing, and communication with innovative technologies. The main objective of teaching engineering students is to train students in a practical capacity.
