ANAMALAI UNIVERSITY

FACULTY OF ENGINEERING AND TECHNOLOGY

B.E. Electrical and Electronics Engineering

Regulations & Curriculum – 2018

HAND BOOK

2018

DEPARTMENT OF ELECTRICAL ENGINEERING
1. Condition for Admission

Candidates for admission to the first year of the four-year B.E. Degree Program shall be required to have passed the final examination of the plus 2 Higher Secondary Course with Mathematics, Physics and Chemistry as courses of study and candidates who have passed the Higher Secondary Examination through vocational stream under Engineering, conducted by the Board of Secondary Education, Government of Tamil Nadu or an examination of any other authority accepted by the Syndicate of this University as equivalent thereto. They shall satisfy the conditions regarding qualifying marks, age and physical fitness as may be prescribed by the Syndicate of the Annamalai University from time to time.

Candidates who have passed the Diploma Program in Engineering of the State Board of Technical Education, Tamil Nadu (listed in Annexure-I) will be eligible for admission to the second year of the four-year degree Program in B.E. under the lateral entry scheme provided they satisfy other conditions.

2. Branches of Study in B.E.

- Chemical Engineering
- Civil Engineering
- Civil and Structural Engineering
- Computer Science and Engineering
- Electrical and Electronics Engineering
- Electronics and Communication Engineering
- Electronics and Instrumentation Engineering
- Information Technology
- Mechanical Engineering
- Mechanical Engineering (Manufacturing)

3. Courses of Study and Scheme of Examinations

The courses of study with respective syllabi and the scheme of Examinations are given separately.

4. Choice Based Credit System (CBCS)

The curriculum includes six components namely Humanities / Social Sciences /Management, Basic Sciences, Engineering Sciences, Professional Core, Professional
Electives and Open Electives in addition to Seminar & Industrial Training and Project. Each semester curriculum shall normally have a blend of theory and practical courses. The total credits for the entire degree Program are 166 (124 for lateral entry students).

5. Eligibility for the Degree

A candidate shall be eligible for the degree of Bachelor of Engineering if the candidate has satisfactorily undergone the prescribed courses of study for a period of four academic years and has passed the prescribed examinations in all the four academic years. For the award of the degree, a student has to

5.1 Earn a minimum of 166 credits (124 for lateral entry students).

5.2 Serve in any one of the Co-curricular activities such as

- National Cadet Corps (NCC)
- National Service Scheme (NSS)
- National Sports Organization (NSO) and
- Youth Red Cross (YRC)

for at least one year. The students enrolled in any one of the co-curricular activities (NCC / NSS / NSO / YRC) will undergo training for about 80 hours and attend a camp of about seven days. The training shall include classes on hygiene and health awareness and also training in first-aid. While the training activities will normally be during weekends, the camp will normally be during vacation period.

(or)

Enrol as a student member of a recognized professional society such as

- Student Chapters of Institution of Engineers (India)
- Student Chapters of other Professional bodies like ICI, ISA, IChemE, IEEE, SAE, ASHRAE, CSI and IWS

5.3 B.E (Honours) Degree

A student shall be eligible to get Under Graduate degree with Honours, if he/she completes an additional 20 credits. Thus, the total credits are 186. Out of 186 credits (144 credits for lateral entry students), 20 credits must be earned by studying additional course offered by the same or allied Departments (listed in Annexure-II) in sixth, seventh and eighth semesters. These additional 20 credits could be acquired through the MOOC courses of SWAYAM portal also.

5.4 B.E Degree with Minor Engineering

A student shall be eligible to get Under Graduate degree with additional Minor Engineering, if he/she completes an additional 20 credits. Out of the 186 credits, 20 credits must be earned from the courses offered by any one of the Departments (listed in Annexure-II) in the Faculty of Engineering and Technology in sixth, seventh and eighth semesters. These additional 20 credits could be acquired through the MOOC courses offered in SWAYAM portal also.
6. Assignment of Credits for Courses

Each course is normally assigned one credit per hour of lecture/tutorial per week and half credit for one hour for laboratory or practical or drawing course per week.

7. Duration of the Program

A student is normally expected to complete the B.E. Program in four years but in any case, not more than seven years from the time of admission.

8. Registration for Courses

A newly admitted student will automatically be registered for all the courses prescribed for the first, second and third semesters without any option.

Every other student shall enrol for the courses intended to be credited in the succeeding semester in the current semester itself by completing the registration form indicating the list of courses. This registration will be done a week before the last working day of the current semester.

A student is required to earn 166 (124 for lateral entry students) credits in order to be eligible for obtaining the degree. However, the student is entitled to enjoy an option to earn either more or less than the total number of credits prescribed in the curriculum of a particular semester on the following guidelines:

8.1 Slow Learners

The slow learners may be allowed to withdraw certain courses with the approval by the Head of the Department and those courses may be completed by them in the fifth year of study and still they are eligible to be awarded with I Class. A student can withdraw a maximum of 2 courses per semester from IV semester to VII semester and take up those courses in the fifth year of study. However, courses withdrawn during odd semesters (V and VII) must be registered in the odd semester of fifth year and courses withdrawn during even semesters (IV and VI) must be registered in the even semester of fifth year.

8.2 Advance Learners

The advance learners may be allowed to take up the open elective courses of eighth semester in sixth and seventh semesters one in each to enable them to pursue industrial training/project work in the entire eighth semester period provided they should register those courses in the fifth semester itself. Such students should meet the teachers offering those elective courses themselves for clarifications. No specific slots will be allotted in the time table for such courses.

9. Mandatory Internship (Industrial Training)

To promote industrial internship at the graduate level in technical institutes and also to enhance the employability skills of the students passing out from Technical Institutions, the internship for the students at different stages of the Program, is included in the curriculum. The student has to undergo the internship during the summer vacation, after the II semester / IV semester / VI semester of the Programs per the details outlined below. Further the student
has to submit a report on completion of the internship during the subsequent Odd semester that is in the III / V / VII semesters respectively.

9.1 During the summer vacation, after the II Semester,

The student must get involved in any of the following Inter/ Intra Institutional Activities for 4 weeks duration:

(i) Training with higher Institutions; Soft skill training organized by Training and Placement Cell.
(ii) Contribution at incubation/ innovation /entrepreneurship cell of the institute.
(iii) Participation in conferences/ workshops/ competitions.
(iv) Learning at Departmental Lab/ Institutional workshop.
(v) Working for consultancy/ research project within the University.
(vi) Participation in activities like IPR workshop /Leadership Talks/ Idea/ Design/ Innovation/ Technical Expos.’

9.2 During the summer vacation, after the IV Semester and also after the VI Semester,

The student may choose any of the following Internship / Innovation / Entrepreneurship related activities for 4 weeks duration:

(i) Work on innovation or entrepreneurial activities resulting in start-up
(ii) Undergo internship with industry/ NGO’s/ Government organizations/ Micro/ Small/ Medium enterprises
(iii) Undergo internship with National Employment Enhancement Mission (NEEM) Facilitator.

10. Project Work

The student typically registers for project at the end of seventh semester and completes it at the end of the eighth semester along with the courses prescribed for study in the eighth semester. However a student who has registered and successfully completed the courses of eighth semester by acquiring additional credits in the earlier semesters can attempt to spend his/her period of study in an industry and complete his/her project work, submit the project report and appear for viva-voce examination at the end of eighth semester.

11. Mandatory Induction program

A 3-week long induction program for the UG students entering the institution, right at the start is proposed. Normal classes start only after the induction program is over. The following are the activities under the induction program in which the student would be fully engaged throughout the day for the entire duration of the program.
12. Electives

The elective courses fall under two basic categories: Professional Electives and Open Electives.

12.1 Professional Elective courses

The Professional Elective courses are offered in the concerned branch of specialization and a student can choose the Professional Elective courses with the approval of the Head of the Department concerned.

12.2 Open Elective courses

Apart from the various Professional elective courses, a student must study three open elective courses two of which offered by the Department concerned and the other open elective course offered by any other Department in the Faculty of Engineering & Technology during either sixth or seventh or eighth semester of study, with the approval of the Head of the Department and the Head of the Department offering the course.

12.3 MOOC (SWAYAM) Courses

Further, the student can be permitted to earn not more than 20% of his total credits (that is 32 credits) by studying the Massive Open Online Courses offered through the SWAYAM Portal of UGC with the approval of the Head of the Department concerned. These courses will be considered as equivalent to the professional elective and/or open elective courses. Thus, the credit earned through MOOC courses can be transferred and considered for awarding Degree to the student concerned.

12.4 Value added courses (Inter Faculty Electives)

Of the four open elective courses, a student must study one value added course that is offered by other Faculties in our University either in sixth or seventh semester of the B.E Program.
12.5 One Credit Courses

One credit course shall be offered by a Department with the prior approval from the Dean, Faculty of Engineering and Technology.

12.5.1 Industry Expert

For one credit courses, a relevant potential topic may be selected by a committee consisting of the Head of the Department concerned and the Board of Studies member from the Department and a senior faculty member from the Department concerned. An expert from industry familiar with the topic chosen may be accordingly invited to handle classes for the students. The details of the syllabus, time table and the name of the industrial expert may be sent by the above committee to the Dean for approval. The credits earned through the one credit courses shall be over and above the total credit requirement prescribed in the curriculum for the award of the degree. Students can take a maximum of two one credit courses (one each in VI and VII semesters). They shall be allowed to take one credit courses offered in other Departments with the permission of Head of the Department offering the courses. A separate mark sheet shall be issued for one credit courses.

12.5.2 NSQF Courses A student can be permitted to acquire additional credits not more than two by undergoing any two of the one credit courses conducted under the auspices of National Skills Qualification Framework (NSQF). NSQF is a nationally integrated education and competency-based skill and quality assurance framework that will provide for multiple pathways, horizontal as well as vertical, including vocational education, vocational training, general education and technical education, thus linking one level of learning to another higher level. This will enable a student to acquire desired competency levels, transit to the job market and at an opportune time, return for acquiring additional skills to further upgrade their competencies.

13. Assessment

13.1 Theory Courses

The break-up of continuous assessment and examination marks for theory courses is as follows:

- First assessment : 10 marks
- Second assessment (mid semester test) : 10 marks
- Third Assessment : 05 marks
- End Semester Examination : 75 marks

13.2 Practical Courses

The break-up of continuous assessment and examination marks for Practical courses is as follows:

- First assessment (test) : 15 marks
- Second assessment (test) : 15 marks
- Maintenance of record book : 10 marks
13.3 Project Work

The continuous assessment marks for the project work will be 40 and to be assessed by a review committee consisting of the project guide and a minimum of two members nominated by the Head of the Department. One of the committee members will be nominated as the Chairman by the Head of the Department. The Head of the Department may be a member or the Chairman. At least two reviews should be conducted during the semester by the review committee. The student shall make presentation on the progress made before the committee. 60 marks are allotted for the project work and viva voce examination at the end of the semester.

13.4 Industrial Internship

After attending the internship during the summer vacation of even semester (II / IV / VI semester), the student has to present a report at the start of the subsequent odd semester (III / V / VII semester) to the committee which will assess and award marks out of 100. The committee is constituted with an Internship Coordinator and a minimum of two members nominated by the Head of the Department for each class.

14. Substitute Assessment

A student, who has missed, for genuine reasons accepted by the Head of the Department, one or more of the assessments of a course other than the final examination, may take a substitute assessment for any one of the missed assessments. The substitute assessment must be completed before the date of the third meeting of the respective class committees.

A student who wishes to have a substitute assessment for a missed assessment must apply to the Dean / Head of the Department within a week from the date of the missed assessment.

15. Student Counsellors (Mentors)

To help the students in planning their course of study and for general advice on the academic Program, the Dean / Head of the Department will attach a certain number of students to a member of the faculty who shall function as student counsellor for those students throughout their period of study. Such student counsellors shall advise the students, give preliminary approval for the courses to be taken by the students during each semester and obtain the final approval of the Dean / Head of the Department.

16. Class Committee

For all the branches of study during the first two semesters, a common class committee will be constituted by the Dean of the faculty. From among the various teachers teaching the same common course to different classes during each semester of the first year, the Dean shall appoint one of them as course coordinator. The composition of the class committee during first and second semesters will be as follows:
• Course coordinators of all courses.
• All the Heads of the Sections, among whom one may be nominated as Chairman by the Dean.
• The Dean may opt to be a member or the Chairman.

For each of the higher semesters, separate class committees will be constituted by the respective Head of the Departments. The composition of the class committees from third to eighth semester will be as follows:
• Teachers of the individual courses.
• A seminar coordinator (for seventh semester only) shall be appointed by the Head of the Department
• A project coordinator (for eighth semester only) shall be appointed by the Head of the Department from among the project supervisors.
• One Professor or Associate Professor, preferably not teaching the concerned class, appointed as Chairman by the Head of the Department.
• The Head of the Department may opt to be a member or the Chairman.

The class committee shall meet three times during the semester. The first meeting will be held within two weeks from the date of class commencement in which the type of assessment like test, assignment etc. for the third assessment and the dates of completion of the assessments will be decided.

The second meeting will be held within a week after the completion of the first assessment to review the performance and for follow-up action.

The third meeting will be held after all the assessments but before the University semester examinations are completed for all the courses, and at least one week before the commencement of the examinations. During this meeting the assessment on a maximum of 25 marks for theory/40 marks for seminar/industrial training, practical and project work will be finalized for every student and tabulated and submitted to the Head of the Department (to the Dean in the case of I & II Semester) for approval and transmission to the Controller of Examinations.

17. Attendance requirements

The students with 75% attendance and above are permitted to appear for the University examinations. However, the Vice Chancellor may give a rebate/concession not exceeding 10% in attendance for exceptional cases only on Medical Grounds.

18. Temporary break of study

A student is permitted to go on break of study for a maximum period of one year either as two breaks of one semester each or a single break of one year.

If a student wishes to apply for break of study, the student shall apply to the Dean in advance, in any case, not later than the last date of the first assessment period. The application duly filled by the student shall be submitted through the Head of the
Department. In the case of short-term employment/ training/ internship, the application for break of study shall be approved and forwarded by the Head of the Department concerned to the Dean.

However, the student must complete the entire Program within the maximum period of seven years.

19. Procedure for withdrawing from the Examinations

A student can withdraw from all the examinations of the semester only once during the entire Program on valid grounds accepted by the University. Such withdrawal from the examinations of a semester will be permitted only if the candidate applies for withdrawal at least 24 hours before the commencement of the last examination. The letter grade ‘W’ will appear in the mark sheet for such candidates.

20. Passing and declaration of examination results

All assessments of all the courses on an absolute marks basis will be considered and passed by the respective results passing boards in accordance with the rules of the University. Thereafter, the Controller of Examinations shall convert the marks for each course to the corresponding letter grade as follows, compute the Grade Point Average (GPA) and Cumulative Grade Point Average (CGPA), and prepare the mark sheets.

<table>
<thead>
<tr>
<th>Marks</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>90 to 100</td>
<td>'S'</td>
</tr>
<tr>
<td>80 to 89</td>
<td>'A'</td>
</tr>
<tr>
<td>70 to 79</td>
<td>'B'</td>
</tr>
<tr>
<td>60 to 69</td>
<td>'C'</td>
</tr>
<tr>
<td>55 to 59</td>
<td>'D'</td>
</tr>
<tr>
<td>50 to 54</td>
<td>'E'</td>
</tr>
<tr>
<td>Less than 50</td>
<td>'RA'</td>
</tr>
</tbody>
</table>

Withdrawn from the examination: Grade 'W'

A student who obtains less than 30 / 24 marks out of 75 / 60 in the theory / practical examinations respectively or is absent for the examination will be awarded grade RA.

A student who earns a grade of S, A, B, C, D or E for a course, is declared to have successfully completed that course. Such a course cannot be repeated by the student.

A student who is detained for lack of attendance must re-register for and repeat the courses in the respective semester.

A student who obtains letter grade RA in the mark sheet must reappear for the examination of the courses except for Honours courses.

A student who obtains letter grade W in the mark sheet must reappear for the examination of the courses.

The following grade points are associated with each letter grade for calculating the grade point average and cumulative grade point average.
Courses with grade RA / W are not considered for calculation of grade point average or cumulative grade point average.

A student can apply for re-valuation of one or more of his examination answers papers within a week from the date of issue of mark sheet to the student on payment of the prescribed fee per paper. The application must be made to the Controller of Examinations with the recommendation of the Head of the Department.

After the results are declared, mark sheets will be issued to the students. The mark sheet will contain the list of courses registered during the semester, the grades scored and the grade point average for the semester.

GPA is the sum of the products of the number of credits of a course with the grade point scored in that course, taken over all the courses for the semester, divided by the sum of the number of credits for all courses taken in that semester.

CGPA is similarly calculated considering all the courses taken from the time of admission.

21. Awarding Degree

After successful completion of the Program, the degree will be awarded with the following classification based on CGPA.

21.1 Honours Degree

To obtain Honours Degree a student must earn a minimum of 186 credits within four years (144 credits within three years for lateral entry students) from the time of admission, pass all the courses in the first attempt from I Semester to VIII Semester (III Semester to VIII Semester for lateral entry students) and obtain a CGPA of 8.25 or above.

21.2 First Class with Distinction

To obtain B.E Degree First Class with Distinction, a student must earn a minimum of 166 Credits within four years (124 credits within three years for lateral entry students) from the time of admission, by passing all the courses in the first attempt from I Semester to VIII Semester (III Semester to VIII Semester for lateral entry students) and obtain a CGPA of 8.25 or above.

21.3 First Class

To obtain B.E Degree First Class, a student must earn a minimum of 166 credits within five years (124 credits within four years for lateral entry students) from the time of admission and obtain a CGPA of 6.75 or above for all the courses from I Semester to VIII Semester (III Semester to VIII Semester for lateral entry students).

21.4 Second Class
For Second Class, the student must earn a minimum of 166 credits within seven years (124 credits within six years for lateral entry students) from the time of admission.

21.5 B.E Degree with Minor Engineering

For Minor Engineering, the student must earn a minimum of 186 credits within four years (144 credits within three years for lateral entry students) from the time of admission, pass all the courses. The rules for awarding the B.E degree in First Class with Distinction or in First Class or in Second Class will be applicable for this also.

22. Ranking of Candidates

The candidates who are eligible to get the B.E. degree with Honours will be ranked together on the basis of CGPA for all the courses of study from I Semester to VIII Semester (III Semester to VIII Semester for lateral entry students).

The candidates who are eligible to get the B.E. degree in First Class with Distinction will be ranked next after those with Honours on the basis of CGPA for all the courses of study from I Semester to VIII Semester (III Semester to VIII Semester for lateral entry students).

The Candidates passing with First Class will be ranked next after those with distinction on the basis of CGPA for all the courses of study from I Semester to VIII Semester (III Semester to VIII Semester for lateral entry students).

The ranking of candidates will be done separately for each branch of study.

23. Transitory Regulations

The University shall have powers to revise or change or amend the regulations, the scheme of examinations, the courses of study and the syllabi from time to time.

Wherever there had been change of syllabi, examinations based on the existing syllabi will be conducted for three consecutive times after implementation of the new syllabi in order to enable the students to clear the arrears. Beyond that the students will have to take up their examinations in equivalent courses, as per the new syllabi, on the recommendations of the Head of the Department concerned.

DEPARTMENT OF ELECTRICAL ENGINEERING

VISION

To develop the Department into a “Centre of Excellence” with a perspective to provide quality education and skill-based training with state-of-the-art technologies to the students, thereby enabling them to become achievers and contributors to the industry, society and nation together with a sense of commitment to the profession.

MISSION

M1: To impart quality education in tune with emerging technological developments in the field of Electrical and Electronics Engineering.

M2: To provide practical hands-on-training with a view to understand the theoretical concepts and latest technological developments.

M3: To produce employable and self-employable graduates.

M4: To nurture the personality traits among the students in different dimensions emphasizing the ethical values and to address the diversified societal needs of the Nation

M5: To create futuristic ambience with the state-of-the-art facilities for pursuing research.

PROGRAM EDUCATIONAL OBJECTIVES

PEO1: Envisage a solid foundation in Basic Sciences, Electrical and Electronics Engineering for a successful career and Life-long Learning in the fields of having Societal Implications.

PEO2: Design and implement effective solutions for complex Electrical and Electronics Engineering problems using modern tools and techniques.

PEO3: Establish Professionalism, Good Communication skills and ethical attitude in multi-disciplinary team work.

PEO4: Apply creative thinking and critical reasoning skills in collaborative research.

PEO5: Contribute to the economical growth of the country by creating job opportunities through entrepreneurship.
PROGRAM OUTCOMES (POs)

After the successful completion of B.E (Electrical and Electronics Engineering) Program the students will be able to:

PO 1: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO 2: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO 3: **Design/Development of Solutions:**

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO 4: **Conduct Investigations of Complex Problems:**

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO 5: **Modern Tool Usage:**

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO 6: **The Engineer and Society:**

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO 7: **Environment and Sustainability:**

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO 8: **Ethics:**

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO 9: **Individual and Team Work:**

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO 10: **Communication:**

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO 11: **Project Management and Finance:**

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO 12: **Life-Long Learning:**

Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**PROGRAM SPECIFIC OUTCOMES (PSOs)**

*At the time of graduation, the students will be able to:*

**PSO 1:** Identify, formulate and investigate various problems of electrical and electronic circuits, power electronics and power systems by applying the fundamental knowledge of mathematics, science and engineering.

**PSO 2:** Design, develop and implement multidisciplinary projects in the field of electrical power and energy using state-of-the-art technologies and modern software tools.

**PSO 3:** Develop effective communication skills and leadership qualities with professional and ethical responsibilities to meet the global technological challenges of the society and electrical industry.

Oscillations, waves and optics

**Pre-requisites:** (i) Mathematics course on Differential equations

(ii) Introduction to Electromagnetic theory

**Unit-I: Simple Harmonic Motion, Damped and Forced Simple Harmonic Oscillator**

Mechanical and electrical simple harmonic oscillators, complex number notation and phasor representation of simple harmonic motion, damped harmonic oscillator – heavy, critical and light damping, energy decay in a damped harmonic oscillator, quality factor, forced mechanical and electrical oscillators, electrical and mechanical impedance, steady state motion of forced damped harmonic oscillator, power absorbed by oscillator.

**Unit-II: Non-Dispersive Transverse and Longitudinal Waves in One Dimension and Introduction to Dispersion**

Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, impedance matching, standing waves and their eigen frequencies, longitudinal waves and the wave equation for them, acoustics waves and speed of sound, standing sound waves.

Waves with dispersion, water waves, superposition of waves and Fourier method, wave groups and group velocity.

**Unit-III: The Propagation of Light and Geometric Optics**

Fermat’s principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster’s angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them, transfer formula and the matrix method.

**Unit-IV: Wave Optics**

Huygens’ principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young’s double slit experiment, Newton’s rings, Michelson interferometer, Mach-Zehnder interferometer.

Farunhofer diffraction from a single slit and a circular aperture, the Rayleigh criterion for limit of resolution and its application to vision; Diffraction gratings and their resolving power.
Unit-V: Lasers

Einstein’s theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO₂), solid-state lasers (ruby, Neodymium), dye lasers; Properties of laser beams: monochromaticity, coherence, directionality and brightness, laser speckles, applications of lasers in science, engineering and medicine.

Suggested Reference Books:

1. Ian G. Main, Oscillations and waves in physics
2. H.J. Pain, The physics of vibrations and waves
3. E. Hecht, Optics
4. A. Ghatak, Optics
5. O. Svelto, Principles of Lasers

Course Outcomes:

At the end of this course, the students will be able to

1. Analyze the various types of damping force.
2. Develop the wave equation for longitudinal and transverse wave motion.
3. Compare the different properties of light
4. Realize the importance of list phenomena in interference and diffraction.
5. State the principle and working of various laser system.

Unit-I: Calculus

Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

Unit-II: Calculus

Rolle’s Theorem, Mean value theorems, Taylor’s and Maclaurin theorems with remainders; indeterminate forms and L'Hospital’s rule; Maxima and minima.

Unit-III: Sequences and Series

Convergence of sequence and series, tests for convergence; Power series, Taylor's series, series for exponential, trigonometric and logarithm functions; Fourier series: Half range sine and cosine series, Parseval’s theorem.

Unit-IV: Multivariable Calculus (Differentiation)

Limit, continuity and partial derivatives, directional derivatives, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers; Gradient, curl and divergence.

Unit-V: Matrices

Inverse and rank of a matrix, rank-nullity theorem; System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Determinants; Eigenvalues and eigenvectors; Diagonalization of matrices; Cayley-Hamilton Theorem, and Orthogonal transformation.

Suggested Text/Reference Books:

**Course Outcomes:**

At the end of this course, students will be able to

1. Solve improper integrals using Beta and Gamma functions.
2. Evaluate the extreme values for functions of two variables.
3. Analyze the convergence of infinite series.
4. Understand vector differentiation and recognize saddle points.
5. Solve eigen values and eigen vectors of a real matrix and Orthogonal transformation of a matrix.

Unit -I: DC Circuits

Unit-II: AC Circuits

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L,C,RL, RLC combinations (Series and Parallel), resonance, Three phase balanced circuits, voltage and current relations in star delta connections.

Unit-III: Transformers

Unit-IV: Electrical Machines

Unit-V: Power Converters and Electrical Installations

DC-DC buck and boost converters, duty ratio control. Single-phase and three-phase voltage source inverters; sinusoidal modulation. Components of LT switchgear: Switch Fuse Unit(SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics of Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

Suggested Text/ Reference Books:

Course Outcomes:

1. Describe and analyze the behavior of various DC circuits.
2. Recall the different terminologies associated with AC circuits to analyze their response.
3. Illustrate the construction and working principle of single and three-phase transformers.
4. Classify the different types of Electrical Machines and explain their construction and working principle.
5. Familiarize with various protective devices and safety measures in electrical installations.

LIST OF EXPERIMENTS:

1. Air Wedge
2. Newton’s Rings
3. Simple Pendulum
4. Dispersive power of the Prism
5. Diffraction Grating
6. Acoustic diffraction Grating
7. Compound Pendulum
8. Kunt’s tube experiment
9. Young’s double slit experiment
10. Laser Grating
11. Torsional Pendulum
12. Young’s Modulus – Non-uniform Bending

Course Outcomes:
At the end of this course, the students will be able to
1. Acquired the knowledge of torsional properties of metals wire.
2. Generalized the dispersion of light through the prism.
3. Calculate the wavelength of monochromatic and polychromatic source of light.
4. Analyze diffraction patterns can be formed by light passing through a series of fine lines.
5. Estimate the size and shape of given unknown fine powder using laser gratings.

LIST OF EXPERIMENTS/ DEMONSTRATIONS:

- Measuring the steady – state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L and R-C circuits – impedance calculation and verification. Observation of phase difference between current and voltage. Resonance in R-L-C circuits.
- Transformers: Observation of the no-load current waveform on an oscilloscope (non-sinusoidal wave-shape due to B-H curve nonlinearity should be shown along with a discussion about harmonies. Loading of a transformer: measurement of primary and secondary voltages and currents and power.
- Demonstration of cut-out sections of machines: de machine (commutator -brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging – slip ring arrangement) and single–phase induction machine.
- Torque Speed Characteristic of separately excited de motor.
- Synchronous Machine operating as a generator: stand-alone operation with a load.
- Control of voltage through field excitation.
- Demonstration of (a) dc-dc convertors (b) dc-ac convertors – PWM waveform (c) the use of dc-ac convertor for speed control of an induction motor and (d) Components of LT switchgear.

Laboratory Outcomes:

1. Identify common electrical components and their ratings.
2. Familiarize with the usage of common electrical measuring instruments.
3. Examine the responses of AC circuits
4. Analyze the basic characteristics of transformers and electrical machines
5. Demonstrate the working of power electronic converters.

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

Unit-I: Introduction to Engineering Drawing covering,

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General methodology); Cycloid, Epicycloid, Hypocycloid and Involute; Scales – Plain, Diagonal and Vernier Scales;

Unit-II: Orthographic Projections covering,

Principles of Orthographic Projections - Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes;

Unit-III: Projections of Regular Solids covering,

Those inclined to both the Planes - Auxiliary Views; Draw simple annotation, dimensioning and scale. Floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc.

Unit-IV: Sections and Sectional Views of Right Angular Solids covering,

Prism, Cylinder, Pyramid, Cone – Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw the sectional orthographic views of geometrical solids, objects from industry and dwellings (foundation to slab only)

Unit-V: Isometric Projections covering,

Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions;
Overview of Computer Graphics covering,

listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.; Isometric Views of lines, Planes, Simple and compound Solids];

Customisation & CAD Drawing

consisting of setup of the drawing page and the printer, including scale settings, Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerancing; Orthographic constraints, Snap to objects manually and automatically; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles;

Annotations, layering & other functions covering

applying dimensions to objects, applying annotations to drawings; Setting up and use of Layers, layers to create drawings, Create, edit and use customized layers; Changing line lengths through modifying existing lines (extend/lengthen); Printing documents to paper using the print command; orthographic projection techniques; Drawing sectional views of composite right regular geometric solids and project the true shape of the sectioned surface; Drawing annotation, Computer-aided design (CAD) software modeling of parts and assemblies. Parametric and non-parametric solid, surface, and wireframe models. Part editing and two-dimensional documentation of models. Planar projection theory, including sketching of perspective, isometric, multiview, auxiliary, and section views. Spatial visualization exercises. Dimensioning guidelines, tolerancing techniques; dimensioning and scale multi views of dwelling;

Demonstration of a simple team design project that illustrates

Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids; meshed topologies for engineering analysis and tool-path generation for component manufacture; geometric dimensioning and tolerancing; Use of solid-modeling software for creating associative models at the component and assembly levels; floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc. Applying colour coding according to building drawing practice; Drawing sectional elevation showing foundation to ceiling; Introduction to Building Information Modelling (BIM).

Suggested Text/Reference Books:

5. (Corresponding set of) CAD Software Theory and User Manuals

Course Outcomes:

Upon completion of this course, the students will be able to:

1. Utilize drawing instruments effectively and present engineering drawings and sketches
2. Construct basic and intermediate geometries.
3. Understand the concept of orthographic, isometric projections of points, lines and regular solids, component drawing, building drawing.
4. Acquire visualization skills to develop new products.
5. Develop their technical communication skills and promote life-long learning.

**Unit-I: Vocabulary Building**

1.1 The concept of Word Formation

1.2 Root words from foreign languages and their use in English

1.3 Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives.

1.4 Synonyms, antonyms, and standard abbreviations.

**Unit-II: Basic Writing Skills**

2.1 Sentence Structures

2.2 Use of phrases and clauses in sentences

2.3 Importance of proper punctuation

2.4 Creating coherence

2.5 Organizing principles of paragraphs in documents

2.6 Techniques for writing precisely

**Unit-III: Identifying Common Errors in Writing**

3.1 Subject-verb agreement

3.2 Noun-pronoun agreement

3.3 Misplaced modifiers

3.4 Articles

3.5 Prepositions

3.6 Redundancies

3.7 Clichés
Unit-IV: Nature and Style of sensible Writing

4.1 Describing
4.2 Defining
4.3 Classifying
4.4 Providing examples or evidence
4.5 Writing introduction and conclusion

Unit-V: Writing Practices & Oral Communication

5.1 Comprehension
5.2 Precis Writing
5.3 Essay Writing

Suggested Readings:

Course Outcomes:

1. Get an exposure of vocabulary and gain a good glossary.
2. Get knowledge regarding use of Grammar in speech and writing.
3. Acquire a knowledge of remembering, understanding, applying, analyzing, evaluating & Creating.
4. Determine how to articulate their ideas effectively to a variety of listeners.
5. Acquire ability to speak and write effectively in English.

Unit – I: Water Chemistry and Surface Chemistry

Unit – II: Electrochemistry and Corrosion

Unit – III: Fuels and Storage Devices

Unit – IV: Polymers and Nano Materials

Unit – V : Engineering Materials and Spectroscopic Techniques

Refractories – Classification, characteristics (Refractoriness, RUL, Thermal spalling, porosity) and uses, Lubricants – Classification, properties (cloud and pour point, flash and fire point, viscosity index) and applications. Principles of spectroscopy – Beer – Lambert’s Law – UV – Visible and IR spectroscopy – Basic principles and instrumentation (block diagram) – Fluorescence and its applications in medicine.

Suggested Text Books:

Course Outcomes:

At the end of the course the student will be able to

1. Develop innovative methods in soft water production for industrial uses and Adsorption analysis.
2. Describe the concept of electrochemistry and its applications; corrosion and its controlling Methods.
3. Demonstrate the properties of fuels and applications of energy storage devices.
4. Evaluate the synthetic method of various polymers and the applications of Nanochemistry.
5. Describe the principles of UV,IR techniques and properties of Refractories and Lubricants.

Unit – I

Introduction to Programming, Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.). Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudocode with examples. From algorithms to programs; source code, variables (with data types) variables and memory locations, Syntax and Logical Errors in compilation, object and executable code.

Unit – II

Arithmetic expressions and precedence, Conditional Branching and Loops, Writing and evaluation of conditionals and consequent branching, Iteration and loops.

Unit – III

Arrays: Arrays (1-D, 2-D), Character arrays and Strings, Basic Algorithms: Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of equations, notion of order of complexity through example programs (no formal definition required).

Unit – IV

Function: Functions (including using built in libraries), Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference, Recursion: Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.

Unit – V

Structure: Structures, Defining structures and Array of Structures, Pointers: Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation). File handling (only if time is available, otherwise should be done as part of the lab).

Suggested Text Books:

Suggested Reference Books

Course Outcomes:

At the end of this course, the students will be able to
1. Formulate algorithms, draw flowcharts and write pseudocode for solving arithmetic and logical problems.
2. Develop C programs using branching and looping statements.
3. Implement searching and sorting algorithms and analyze the order of complexities.
4. Define and call simple functions by value and by reference and also to write recursive functions.
5. Utilize structures, pointers and files in C programming.

Unit - I: Multivariable Calculus (Integration)  (*10 lectures*)

Multiple Integration: Double integrals (Cartesian), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes, Center of mass and Gravity (constant and variable densities); Triple integrals (Cartesian), orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds; Scalar line integrals, vector line integrals, scalar surface integrals, vector surface integrals, Theorems of Green, Gauss and Stokes.

Unit – II: First order ordinary differential equations

Exact, linear and Bernoulli’s equations, Euler’s equations, Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut’s type.

Unit – III: Ordinary differential equations of higher order

Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equation; Power series solutions; Legendre polynomials, Bessel functions of the first kind and their properties.

Unit – IV: Complex Variable – Differentiation

Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.

Unit – V: Complex Variable – Integration

Contour integrals, Cauchy- Goursat theorem (without proof), Cauchy Integral formula (without proof), Liouville’s theorem and Maximum-Modulus theorem (without proof); Taylor’s series, zeros of analytic functions, singularities, Laurent’s series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals using the Bromwich contour.

Suggested Text/Reference Books:

**Course Outcomes:**

At the end of this course, students will be able to

1. Solve double and triple integrals in finding area and volumes.
2. Solve first order ordinary differential equations
4. Construct analytic function and analyze conformal mappings.
5. Evaluate the complex integrals and contour integration.

List of Topics:

1. Listening Comprehension
2. Pronunciation, Intonation, Stress and Rhythm
3. Common Everyday Situations: Conversations and Dialogues
4. Communication at Workplace
5. Interviews
6. Formal Presentations

Suggested Software package: Globaren Package for communicative English

The Globaren Package consists of the following exercises

1. Reading comprehension
2. Listening comprehension
3. Vocabulary exercises
4. Phonetics
5. Role Play in dialogues
6. Auto Speak

Suggested Readings:

3. A Practical course in English Pronunciation, (with two Audio cassettes)
   (Macmillan).
5. English Skills for Technical Students, WBSCTE with British Council, OL.

Course Outcomes:

1. Student will heighten their awareness of correct usage of English Grammar in writing and speaking.
2. Acquire speaking ability in English both in terms of fluency and comprehensibility.
3. Enhance competence in the four modes of literacy; Writing, Speaking, Reading and Listening.
4. Ensure student to improve their accuracy and fluency in producing and understanding spoken and written English
5. Exposure of the grammatical forms of English and the use of these forms in specific communicative contexts.

List of Experiments:

1. Determination of surface tension and viscosity
2. Thin layer chromatography
3. Ion exchange column for removal of hardness of water
4. Determination of chloride content of water
5. Determination of the rate constant of a reaction
6. Determination of cell constant and conductance of solutions
7. Potentiometry - determination of redox potentials and emfs
8. Saponification/acid value of an oil
9. Determination of the partition coefficient of a substance between two immiscible liquids
10. Adsorption of acetic acid by charcoal
11. Volumetric analysis

Course outcomes:

At the end of the course the students will be able to

1. Determine the physical properties like surface tension and viscosity.
2. Determine rate of reactions and soapnification of oil.
3. Calculate the quantity of adsorbate adsorbed by charcoal.
4. Determine the impurity from Pharmaceutical products and hardness of water.
5. Determine exact concentration of acid and bases present in the industrial wastes.

Mapping of Course Outcomes with Program Outcomes
[The laboratory should be preceded or followed by a tutorial to explain the approach or algorithm to be implemented for the problem given]

**Tutorial 1:** Problem solving using computers:
**Lab 1:** Familiarization with programming environment

**Tutorial 2:** Variable types and type conversions:
**Lab 2:** Simple computational problems using arithmetic expressions

**Tutorial 3:** Branching and logical expressions:
**Lab 3:** Problems involving if-then-else structures

**Tutorial 4:** Loops, while and for loops:
**Lab 4:** Iterative problems e.g., sum of series

**Tutorial 5:** 1D Arrays: searching, sorting:
**Lab 5:** 1D Array manipulation

**Tutorial 6:** 2D arrays and Strings
**Lab 6:** Matrix problems, String operations

**Tutorial 7:** Functions, call by value:
**Lab 7:** Simple functions

**Tutorial 8 & 9:** Numerical methods (Root finding, numerical differentiation, numerical integration):
**Lab 8 and 9:** Programming for solving Numerical methods problems

**Tutorial 10:** Recursion, structure of recursive calls
**Lab 10:** Recursive functions

**Tutorial 11:** Pointers, structures and dynamic memory allocation
**Lab 11:** Pointers and structures

**Tutorial 12:** File handling:
Lab 12: File operations

Laboratory Outcomes:

At the end of this course, the students will be able to

1. Analyze program requirements and develop programs using conditional and looping statements.
2. Write programs for handling arrays and strings.
3. Create C programs with user defined functions and recursive function calls.
4. Utilize pointers and structures for dynamic memory allocation in C programming.
5. Develop C programs for handling files.

(i) Lectures & Videos  
(10 hours)

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods (3 lectures)
2. CNC machining, Additive manufacturing (1lecture)
3. Fitting operations & power tools (1lecture)
4. Electrical & Electronics (1 lecture)
5. Carpentry (1lecture)
6. Plastic moulding, glass cutting (1lecture)
7. Metal casting (1lecture)
8. Welding (arc welding & gas welding), brazing (1lecture)

(ii) Workshop Practice: (60 hours)

1. Machine shop (10 hours)
2. Fitting shop (8hours)
3. Carpentry (6hours)
4. Electrical & Electronics(8hours)
5. Welding shop ( 8 hours (Arc welding 4 hrs + gas welding 4hrs)
6. Casting (8hours)
7. Smithy (6 hours)
8. Plastic moulding & Glass Cutting (6hours)

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

Suggested Text/Reference Books:

Course Outcomes:

Upon completion of this course, the students will be able to

1. Summarize the various conventional and latest manufacturing processes
2. Gain knowledge of the different manufacturing processes which are commonly employed in the industry, to fabricate components using different materials.
3. Acquire the ability to fabricate models of their own.
4. Develop skill to make simple fitting joints.
5. Get practical knowledge of the dimensional accuracies and dimensional tolerances possible with different manufacturing processes.

Course Objectives:

- To understand the basic concepts of partial differential equations which is helpful in solving Real world problems.
- Introduce Fourier series which is very useful in the study of electrostatics, acoustics and computing.
- Introduce Boundary value problems which is helpful in investigation of the important features of electromagnetic theory.
- The study of Fourier transform is useful in solving problems in frequency response of a filter and signal analysis.
- Provide a study of Z-transform which can played important role in the development of communication engineering.

Unit – I: Partial Differential Equations

Unit – II: Fourier series

Dirichlet's conditions - General Fourier series - Odd and Even functions - Half range sine series - Half range cosine series - Complex form of Fourier series – Parseval’s identity.

Unit – III: Boundary Value Problems

Solutions of one-dimensional wave equation – One dimensional heat equation (without derivation) – Fourier series solutions in Cartesian co-ordinates.

Unit – IV: Fourier Transform

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem - Parseval’s identity

Unit – V: Z – Transform and Difference Equations

Text Books:

References Books:

Course Outcomes:

At the end of this course, students will able to
1. Acquire basic understanding of the most common partial differential equations.
2. Understand the concepts of Fourier series.
3. Ability to solve boundary value problems.
4. Able to investigate signals problems using Fourier transform
5. Familiarize Z-transform that play important roles in many discrete engineering problems.

Mapping with Program Outcomes
Course Objectives:

- To realize the importance of environment for engineering students.
- To understand the basics of ecosystems.
- To discuss various aspects of bio diversity and its conservation.
- To make aware the student about global environmental pollution problems and natural disasters.
- To give the ideas about advance technologies of engineering that will be useful to protect environment.

Unit–I: Multidisciplinary Nature of Environmental Studies

Definition, scope and importance - Need for public awareness. Natural resources and associated problems - Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people. Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies. Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies- Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification. - Role of an individual in conservation of natural resources. - Equitable use of resources for sustainable lifestyles.

Unit–II: Ecosystems

Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem -Ecological succession - Food chains, food webs and ecological - pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem - Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit–III: Biodiversity and its Conservation

Introduction – Definition: genetic, species and ecosystem diversity - Bio geographical classification of India - Value of biodiversity : consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, National and local levels - India as a mega-diversity nation - Hot-spots of biodiversity - Threats to biodiversity:
habitat loss, poaching of wildlife, man-wildlife conflicts - Endangered and endemic species of India - Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Unit–IV: Environmental Pollution

Definition - Cause, effects and control measures of Air pollution - Water pollution - Soil pollution - Marine pollution- Noise pollution - Thermal pollution - Nuclear hazards- Solid waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - Disaster management: floods, earthquake, cyclone and landslides. Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, and watershed management - Resettlement and rehabilitation of people; its problems and concerns. - Environmental ethics: Issues and possible solutions - Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust.

Unit–V: Human Population and the Environment

Field Work:

Visit to a local area to document environmental assets -river / forest / grassland / hill / mountain-Visit to a local polluted site – Urban/Rural/Industrial/Agricultural - Study of common plants, insects, birds - Study of simple ecosystems-pond, river, hill slopes, etc. (Field work equal to 5 lecture)

Text Books:

5. Down to Earth, Centre for Science and Environment (R).
7. Hawkins, R.E., Encyclopedia of Indian Natural History, Bombay Natural History Society, Bombay..
11. Mhaskar A.K., Matter Hazardous, Techno-Science Publication..

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the importance of environment.
2. Analyze the importance of environment in engineering.
3. Apply their own ideas and demonstrate advanced technologies that will be useful to protect environment.
4. Employ awareness among the society about environmental problems and natural disasters.
5. Practice according to the present and future environmental issues.

Course Objectives:

- To introduce the fundamentals of forces and their effects with their governing laws.
- To understand the definitions of particle, body forces and their equilibrium conditions.
- To discuss about geo material properties of different types of surfaces of solids.
- To analyze the dynamics of particles and Newton’s law of motion.
- To understand and predict the forces and its related motions.

Unit–I: Statics of Particles

Equilibrium of Particle-Vector representation of Space Force-Equilibrium of Particle in Space-Equivalent System of Forces-Principle of Transmissibility.

Unit–II: Equilibrium of Rigid Bodies

Unit–III: Geometrical Properties of Surfaces and Solids

Centroid and Centre of Gravity-Determination of Centroid of Sections of Different Geometry- Centre of Gravity of a Body-Area Moment of Inertia-Parallel Axis Theorem-Perpendicular Axis Theorem-Determination of Moment of Inertias of Rectangular, Triangular, Circular and Semi-circular- Moment of Inertias of structural Steel Sections of Standard and Composite Sections.

Polar Moment of Inertia-Radius of Gyration-Principal Moment of Inertia-Mass Moment of Inertia- Determination of Mass Moment of Inertia of a Thin Rectangular Plate, Thin Circular Disc, Solid Cylinder, Prism, Sphere and Cone from first principles.

Unit–IV: Dynamics of Particles

Introduction-Kinematics and Kinetics-Displacements, Velocity and Acceleration-Equations of Motion-Types of Motion-Rectilinear Motion-Relative Motion-Curvilinear Motion-Projectiles.

**Unit-V: Friction and Elements of Rigid Body Dynamics**

Rolling Resistance-Translation and Rotation of Rigid Bodies-Velocity and Acceleration-General Plane Motion of Simple Rigid Bodies such as Cylinder, Disc/Wheel and Sphere.

**Text Books:**

**References:**

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to
1. Understand the forces and its related laws of mechanics in static and dynamic conditions.
2. Analyze the forces and its motions on particles, rigid bodies and structures.
3. Solve the moment of inertia of any section and masses for the structural members.
4. Study about Dynamics of particles.
5. Understand the elements of rigid body dynamics.

</table>
Course Objectives:

- To understand the physical properties of fluids, fluid pressure and its measurement.
- To derive the equation of conservation of mass and its application.
- To solve problems of fluid kinematics and dynamics specifically flow through pipes and open channel flow.
- To use important concepts of continuity equation, Bernoulli’s equation and apply the same to problems.
- To study the performance of Turbines, Radial flow, Reaction turbines and governing of turbines.
- To study the characteristics of Centrifugal pumps and reciprocating pumps.

Unit–I: Properties of Fluids, Fluid Pressure and its Measurement

Mass density, specific weight, specific volume, specific gravity, viscosity - Newton’s law of viscosity - compressibility - surface tension and capillarity - real and ideal fluids.

Pressure - atmospheric and vacuum pressures - measurement of pressure by manometers and pressure gauges - total pressure and center of pressure – Buoyancy - metacentre - simple problems.

Unit–II: Dynamics of Fluid Flow

Kinematics of flow - types of fluid flow - continuity equation - Euler's equation of motion - Bernoulli's equation - practical applications - venturi meter, orifice meter and pitot tube. Simple treatment of orifices, mouthpieces, notches and weirs.

Flow through pipes - loss of energy due to friction - minor energy losses - hydraulic gradient and total energy line - flow through pipes in series - Flow through parallel pipes - power transmission through pipes - flow through nozzles.

Unit–III: Flow in Open Channels

Classification of flow in channels - Chey’s and Manning's formulae - most economical Rectangular, Trapezoidal and Circular sections of channel. -Non-uniform flow through open channels - specific energy and specific energy curve - critical depth - critical velocity - critical, supercritical and subcritical flows - alternate depths.

Unit–IV: Impact of Jet and Turbines

Impact of jets - force exerted by a fluid on stationary and moving flat plates held in various positions - force exerted on curved plates - concept of velocity triangles.

Unit-V: Pumps

Centrifugal pumps - main parts - work done - definitions of heads and efficiencies - multistage pumps - specific speed - priming - cavitations’.

Reciprocating pumps - main parts - working principle – slip - indicator diagrams - effects of acceleration and friction on indicator diagrams - maximum speed of a reciprocating pump - study of air vessels.

Text Books:

References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Apply the basic knowledge of fluid mechanics in finding fluid properties, performance parameters of hydraulic turbines and pumps.
2. Understand various dynamics of fluid flow.
3. Use fluid dynamics for study of flow through pipes and flow in open channels.
4. Present hydraulic design for the construction of efficient hydraulic turbines and pumps.
5. Get through knowledge of different kinds of pumps.

Mapping with Program Outcomes
Course Objectives:

- To introduce the concepts of network theorems along with node and mesh methods
- To explain the time domain solution for first and second order networks
- To elucidate the steady state analysis of the ac circuits and the theory of mutually coupled circuits
- To introduce the Laplace transforms for electrical circuits and explain its transfer function representation
- To articulate the relationship among the variables in two port networks

Unit - I: Network Theorems

Unit - II: Solution of First and Second order networks

Solution of first and second order differential equations for Series and parallel R-L, R-C, R-L-C circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response.

Unit - III: Sinusoidal Steady State Analysis

Representation of sine function as rotating phasor, phasor diagrams, impedances and admittances, AC circuit analysis, effective or RMS values, average power and complex power. Three-phase circuits. Mutual coupled circuits, Dot Convention in coupled circuits, Ideal Transformer.

Unit - IV: Electrical Circuit Analysis Using Laplace Transforms

Unit - V: Two Port Network and Network Functions

Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters, admittance parameters, transmission parameters and hybrid parameters, interconnections of two port networks.

Text Books:

References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Apply network theorems for the analysis of electrical circuits
2. Analyze the transient and steady-state response of electrical circuits
3. Understand the sinusoidal steady-state analysis
4. Apply Laplace transforms for deriving the transfer function representation
5. Understand the relationship of the variables in two post networks

Course Objectives:

- To introduce the basics of PN junction and develop applications from its operation
- To explain the structure, characteristics and operational aspects of BJT circuits
- To elucidate the theory of MOSFET and there from develop its small signal and high frequency equivalent circuits
- To articulate the operation of differential, multistage and operational amplifiers
- To develop applications for op-amp circuits

Unit - I: Diode Circuits

P-N junction diode, I-V characteristics of a diode; review of half-wave and full-wave rectifiers, Zener diodes, clamping and clipping circuits.

Unit - II: BJT Circuits

Structure and I-V characteristics of a BJT; BJT as a switch. BJT as an amplifier: small-signal model, biasing circuits, current mirror; common-emitter, common-base and common-collector amplifiers; Small signal equivalent circuits, high-frequency equivalent circuits

Unit - III: MOSFET circuits

MOSFET structure and I-V characteristics. MOSFET as a switch. MOSFET as an amplifier: small-signal model and biasing circuits, common-source, common-gate and common-drain amplifiers; small signal equivalent circuits - gain, input and output impedances, trans-conductance, high frequency equivalent circuit.

Unit - IV: Differential, Multi-Stage and Operational Amplifiers

Differential amplifier; power amplifier; direct coupled multi-stage amplifier; internal structure of an operational amplifier, ideal op-amp, non-idealities in an op-amp (Output offset voltage, input bias current, input offset current, slew rate, gain band width product)

Unit - V: Linear Applications of Op-Amp

Idealized analysis of op-amp circuits. Inverting and non-inverting amplifier, differential amplifier, instrumentation amplifier, integrator, active filter, P, PI and PID controllers and lead/lag compensator using an op-amp, voltage regulator, oscillators (Wein bridge and phase shift).
Analog to Digital Conversion. Zero Crossing Detector, Square-wave and triangular-wave generators.

Text Books:

References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the basics of PN junction from an application perspective
2. Analyze the operation of BJT circuits
3. Apply the operation of MOSFET to obtain its equivalent circuits
   4. Analyze the operation of differential, multistage and operational amplifiers
   5. Apply the theory of op-amps to derive practical applications

Course Objectives:

- To understand the properties of fluids and fluid statics, methods for determination of co-efficient of discharge are to be explained and computed practically.
- To study of the characteristic features of pumps and turbines using experiments.
- To understand the significance and role of such utilities in their further course of study.

LIST OF EXPERIMENTS:

1. Determination of Co-efficient of discharge of Mouth Piece
2. Determination of Co-efficient of discharge of Venturi meter
3. Determination of Co-efficient of Head loss due to Sudden Change in Section
4. Determination of Co-efficient of Head loss due to Friction in Pipe
5. Determination of Co-efficient of discharge of Rectangular Notch
6. Determination of Co-efficient of Impact of Jet on Vanes
7. Study of Performance characteristics of Elmo Pump (Centrifugal Pump)
8. Study of Performance characteristics of Sump Pump (Centrifugal Pump)
9. Study of Performance characteristics of Submersible Pump (Centrifugal Pump)
10. Study of Performance characteristics of Gould’s Pump (Reciprocating Pump)
11. Study of Performance characteristics of Pelton Turbine (Constant Speed method)
12. Study of Performance characteristics of Francis Turbine (Constant Head method)
13. Determination of Metacentric Height of a floating vessel (Demo Only)
14. Study on Flow through Open Channel (Demo Only)

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Determine the properties of fluids, pressure and their measurements.
2. Measure flow in pipes and determine frictional losses.
3. Compute forces on immersed plane and curved plates applying continuity equation and energy equation in solving problems on flow through conduits.
4. Develop Characteristics of pumps and turbines.
5. Develop Characteristics of turbines.

Course Objectives:

- To solve circuits by applying theorems.
- To illustrate the concepts of RL and RC circuits.
- To gain knowledge about resonance circuits

List of Experiments:

1. Verification of Thevenin's theorem
2. Verification of Norton's theorem.
3. Verification of Superposition theorem
4. Verification of Maximum power transfer theorem.
5. Verification of Reciprocity Theorem
6. Study of Series and parallel RL circuits
7. Study of Series and parallel RC circuits
8. Study of Series and parallel RLC circuits
9. Wave shaping circuits
10. Series resonance circuits
11. Parallel resonance circuits

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Basic Knowledge about theorems.
2. Analyze RL, RC and RLC series circuits.
3. Analyze RL, RC and RLC parallel circuits.
4. Understand different wave shaping circuits.
5. Ability to design resonance circuit.

Course Objectives:

- To understand basic electronic components and its applications
- To understand the basic functions of operational amplifier.
- To illustrate the application of operational amplifier.

List of Experiments:

2. Half wave and full wave rectifiers with capacitor filter.
3. Characteristics of Transistors.
5. Wave shaping circuits
6. Zero crossing detector and Schmitt trigger using OP-AMP
7. Precision Rectifiers
8. R.C Phase Shift Oscillator using OP-AMP
9. Voltage to Current Converter and Current to Voltage Converter
10. Instrumentation Amplifier
12. Analog to Digital Converter.

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Learn the application and characteristics of basic electronic devices.
2. Understand the characteristics of transistors.
3. Design and analyze various rectifier and amplifier circuits.
4. Understand the functioning of OP-AMP and design OP-AMP based circuits
5. Understand the circuit connections and testing points.

Course Objectives:

- Introduce Probability theory which is helpful in investigating the important features of the random experiment.
- To understand the basic concepts of random processes which are widely used in Electrical fields.
- The aim of theory of sampling is to get as much information as possible of the population to the process of making scientific judgments in the face of uncertainty and variation.
- To develop the skills of the students in finding numerical solution of Interpolation, differentiation and integration problems.
- Provide the study of numerical solution of algebraic and transcendental equations, the numerical solution of ordinary and partial differential equations.

Unit–I: Probability and Random Variables

Definition – Types of random variables - probability distribution function - probability density function – expectation and moments – moment generating functions – joint probability distribution -marginal probability distribution function – joint probability density function – marginal probability density function – conditional probability density function.

Unit–II: Random Processes

Unit–III: Test of Significance

Hypothesis, testing – Large sampling tests – small sampling test based on t, F and chi-square distributions – interval estimates of mean, standard deviation and proportion.

Unit–IV: Interpolation, Numerical Differentiation and Integration

Unit–V: Solution of Algebraic, Transcendental and Ordinary Differential Equations

Text Books:

Reference Books:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Acquire skills in handling situations involving random experiments.
2. Familiarize the concept of random processes.
3. Understand the basic concepts of theory of sampling to any collection of individuals of their attributes can be numerically specified.
4. Solve problems algebraic transcendental equations and numerical integration.
5. Obtain numerical solution of ordinary and partial differential equations.

Course Objectives:

- To introduce the concepts of linear data structure.
- To understand the different methods of non linear data structure representations.
- To introduce object oriented programming concepts.
- To study objects and classes.
- To impart knowledge on inheritance and operator overloading.

Unit–I: Linear Data Structures

Introduction to data structures, Primitive and non-primitive data structures, Arrays in C-types, Structures in C, Stack-implementation, operations, Queues-operations-Lists-Linked list-types, Applications.

Unit–II: Non-Linear Data Structures

Tree - Binary tree-representation - Tree traversal techniques- Graph-representation, traversal-Sorting- Selection Sorting, Insertion sorting, Merge sorting, Radix sorting, Searching -techniques -Hashing.

Unit–III: Object Oriented Programming

Object Oriented Programming concepts- Objects- classes – methods and message passing, encapsulation, abstraction, inheritance, polymorphism and dynamic binding-characteristics of OOPS-benefits of object orientation. Introduction to C++ and data types- Operators in C++.

Unit–IV: Objects and Classes

Objects and class -defining a class –defining member functions-Private and public member function–accessing class members, creating objects, object as function arguments-Array fundamentals - array within a class - array of objects. Constructors and destructors-Function overloading- Inline function - Virtual function.

Unit–V: Operations

Operator overloading – over loading unary, binary and relational operators-type conversion, Inheritance- derived class and base class-visibility mode-public, private and protected–various forms of in heritance. Address and pointers-Files and streams.
Text Books:

Mapping with Program Outcomes
Course Objectives:

- To learn about construction, principle of operation, characteristics and testing of DC machine.
- To have a sound knowledge about transforms.
- To familiarize the students with the constructions, operating principle, speed control of three phase induction motors.
- To provide basic knowledge about the single phase induction motor and to illustrate the different testing techniques available and obtain their characteristics.
- To import important knowledge on various aspects of synchronous machines.

Unit–I: D.C. Machines

Unit–II: Transformers

Unit–III: Three Phase Induction Motors

Constructional features,cageandslipringrotors,principleofoperation,synchronous rotation of gap flux, phasor diagram, equivalent circuit, expression for torque, torque-slip characteristic-condition for maximum torque and maximum power- load test- no-load and blocked-rotor tests-Pre-determination of motor performance on the basis of circle diagram-starting of slip-ring and cage motors- Speed control of induction motors- Variation of supply voltage-rotor resistance control.
Unit–IV: Single Phase Induction Motors

Double field revolving theory, cross field theory. Torque slip characteristic and its interpretation, split phase starting, resistance start, resistance start and run, capacitance start, capacitance start and run, typical performance characteristics, determination of constants of equivalent circuit, computation of performance from equivalent circuit.

Unit–V: Synchronous Machines

Constructional features of round rotor type and salient pole type machines, EMF equation, rotating magnetic field, armature reaction- synchronous reactance, phasor diagram-performance characteristics, predetermination of voltage regulation by synchronous impedance, ampere turn and potier methods - Parallel operation- Principle of operation of synchronous motor on infinite bus bars, phasor diagram, V curves and inverted V curves, hunting and its suppression- starting methods - Permanent magnet synchronous motors – Principle of operation and characteristics.

Text Books:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the construction, working principles & operations of all types of machines.
2. Predict the performance of electrical machines from their equivalent circuit models.
3. Select suitable machine to meet specific application requirement.
4. Validate the theoretical concepts by conducting experiments in practical sessions.
5. Study the different testing techniques available to assess the performance of machine.

Course Objectives:

- To review the fundamental concepts relating to Number systems, codes and Boolean algebra function of logic gates and to explain the working and the characteristics of Logic families and Logic packages.
- To bring out the implementation of Boolean function using logic gates, simplification of Boolean Expression using K-map and implementation of various combinational circuits.
- To illustrate the function of various types of flip-flops and counters with the help of circuit diagram, truth table, state equation and timing diagram.
- To study about operation of A/D and D/A converters.
- To study the classification of semiconductor memories and programmable logic devices.

Unit - I: Fundamentals of Digital Systems and logic families

Digital signals, digital circuits, AND, OR, NOT, NAND, NOR and Exclusive-OR operations, Boolean algebra, examples of IC gates, number systems-binary, signed binary, octal hexadecimal number, binary arithmetic, one’s and two’s complements arithmetic, codes, error detecting and correcting codes, characteristics of digital ICs, digital logic families, TTL, Schottky TTL and CMOS logic, interfacing CMOS and TTL, Tri-state logic.

Unit - II: Combinational Digital Circuits

Standard representation for logic functions, K-map representation, simplification of logic functions using K-map, minimization of logical functions. Don’t care conditions, Multiplexer, De- Multiplexer/Decoders, Adders, Subtractors, BCD arithmetic, carry look ahead adder, serial adder, ALU, elementary ALU design, popular MSI chips, digital comparator, parity checker/generator, code converters, priority encoders, decoders/drivers for display devices, Q-M method of function realization.

Unit - III: Sequential circuits and systems

A 1-bit memory, the circuit properties of Bistable latch, the clocked SR flip flop, J-K-T and D- types flip flops, applications of flip flops, shift registers, applications of shift registers, serial to parallel converter, parallel to serial converter, ring counter, sequence generator, ripple(Asynchronous) counters, synchronous counters, counters design using flip flops, special counter IC’s, asynchronous sequential counters, applications of counters.
Unit - IV: A/D and D/A Converters

Digital to analog converters: weighted resistor/converter, R-2R Ladder D/A converter, specifications for D/A converters, examples of D/A converter ICs, sample and hold circuit, analog to digital converters: quantization and encoding, parallel comparator A/D converter, successive approximation A/D converter, counting A/D converter, dual slope A/D converter, A/D-converter using voltage to frequency and voltage to time conversion, specifications of A/D converters, examples of A/D converter ICs.

Unit - V: Semiconductor memories and Programmable logic devices.

Memory organization and operation, expanding memory size, classification and characteristics of memories, sequential memory, read only memory (ROM), read and write memory (RAM), content addressable memory (CAM), charge de coupled device memory (CCD), commonly used memory chips, ROM as a PLD, Programmable logic array, Programmable array logic, complex Programmable logic devices (CPLDS), Field Programmable Gate Array (FPGA).

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand working of logic families and logic gates.
2. Design and implement Combinational and Sequential logic circuits.
3. Understand the process of Analog to Digital conversion and Digital to Analog conversion.
4. Apply PLDs to implement the given logical problem.
5. Design digital circuits for consumer application

Course Objectives:
- To introduce the basic functional elements of instrumentation
- To discuss different methods of power and energy measurement.
- To explain various resistance and impedance measurement methods
- To study various storage and display devices
- To study various recorders, transducers and the data acquisition systems

Unit–I: Measurement of Voltage and Current

Units and standards-Dimensional analysis - D'Arsonval Galvanometer- Principle, construction, operation and comparison of moving coil, moving iron meters, dynamometer, induction type - Extension of range and calibration of voltmeter and ammeter – Errors and compensation.

Unit–II: Measurement of Power and Energy

Unit–III: Resistance and Impedance Measurements

Unit–IV: Storage and Display Devices

Sampling- CRO dual trace and dual beam oscilloscope- applications-Digital storage oscilloscope and applications - XY Mode - Phase measurement using oscilloscope –Null balance method- Phase shift to pulse conversion method Magnetic disk and tape, digital plotters and printers- CRT display- digital CRO-LED-LCD.

Unit–V: Recorders, Transducers and Data Acquisition Systems

Classification of transducers- Selection of transducers- Elements of data acquisition system- A/D, D/A converters - Smart sensors.

**Text Books:**

**References:**

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to:

1. Understand basic principle of measuring instruments.
2. Understand the concept of measurement of power and energy in single and three phase circuits.
3. Gain Knowledge on the measurement of resistance and impedance.
4. Acquire knowledge of display instruments, amplifier measurements and CRO.
5. Distinguish recorders, transducers, data acquisition systems and display devices, frequency and period measurements.

Course Objectives:

- To look back mathematical tools like vector calculus for investigating the physics of electric and magnetic fields.
- To understand the concepts of electrostatics, electrostatic field due to various charge distribution, electric potential, energy density.
- To study Electro static boundary conditions, capacitors of various geometries, Poisson’s and Laplace’s equations.
- To impart knowledge on the concepts of magneto statics, magnetic flux density, scalar and vector potential and their applications.
- To understand Faraday’s laws, time varying fields, magnetic boundary conditions and Maxwell’s equations.

Unit - I: Review of Vector Calculus

Vector algebra-addition, subtraction, scalar and vector multiplications, three orthogonal coordinate systems (rectangular, cylindrical and spherical), Conversion of a vector from one coordinate system to another. Vector calculus-vector operator-del, gradient, divergence and curl.

Unit - II: Static Electric Field

Unit - III: Conductors, Dielectrics and Capacitance

Current and current density, Ohms Law in Point form, Continuity of current, Boundary conditions of perfect dielectric materials. Permittivity of dielectric materials, Capacitance, Capacitance of a two-wire line, Poisson’s equation, Laplace’s equation, Solution of Laplace and Poisson’s equation, Application of Laplace’s and Poisson’s equations.

Unit - IV: Static Magnetic Fields

Unit V: Time Varying Fields and Maxwell’s Equations

Text Books:

References:

Course Outcomes:

At the end of the course, students will demonstrate the ability to
1. Understand the application of vector calculus for analyzing electromagnetism.
2. Analyze electrostatic fields due to different charge distributions, electric potential and energy density.
3. Familiarize about various capacitor geometries, solutions of Poisson’s and Laplace’s equations.
4. Understand basic concepts of static magnetic field, scalar and vector magnetic potentials.
5. Understand Maxwell’s equations, wave propagation, magnetic circuits and magnetic boundary conditions.

Course Objectives:

- To familiarize the students with the functioning of different types of DC, AC machines,
- To illustrate the different testing techniques available for DC, AC machines and transformer and obtain their characteristics practically.
- To make the students understand the concept of predetermination of voltage regulation of alternator by various method.
- To make the students understand the V and inverted V characteristics of three phase synchronous machine at different load condition
- To illustrate the synchronization and parallel operation of 3 phase alternators.

LIST OF EXPERIMENTS:

1. Open Circuit Characteristics of DC Shunt Generator
2. Internal & External Characteristics of DC Shunt &Compound Generators
3. Swinburne’s Test
4. Open Circuit & Short Circuit Tests on Single Phase Transformer
5. Separation of Losses in Single Phase Transformer
6. Pseudo load test on Three Phase Transformer
7. Load test on 3 phase slip ring induction generators
8. Load test on 3 phase slip ring induction motor
9. Predetermination of equivalent circuit of 1 phase induction motor
10. Predetermination of voltage regulation of 3 phase alternator using 
    a) EMF method b) MMF method c) ZPF method 
    d) V and inverted V curves of synchronous motor
11. Synchronization and parallel operation of two 3 phase alternators

Course Outcomes:

At the end of the course, students will demonstrate the ability
1. Understand the construction, working principles & operations of DC machines and transformers, Induction motors and Synchronous machines.
2. Predict the performance of electrical machines from their equivalent circuit models.
3. Validate the theoretical concepts by conducting experiments in practical sessions.
4. Distinguish the various categories of electrical machines.
5. Study the different testing techniques available to assess the performance of machine.

Course Objectives:

- To understand the basic code conversion and Karnaugh Map reduction
- To illustrate the design of Combinational and Sequential logic circuits.
- To design different counters.

List of Experiments:

1. Verification of basic gates and logic circuit using universal building blocks.
2. Karnaugh Map reduction
3. Parity generator and checker circuits
4. Multiplexer and De multiplexer
5. a. Design of Half adder and full adder circuits
    b. Full adder circuit using Multiplexer
6. Decimal to BCD converter.
7. BCD to seven segment display.
8. Design of Modulo UP Counters
9. Design of Modulo DOWN Counters
10. Design of digital to analog circuits
11. Design of Non-Sequential Counter
12. Design of Sequence Generator

Course Outcomes:

At the end of the course, students will demonstrate the ability to
1. Understand the basic code conversion and Karnaugh mapping technique
2. Acquire the operating theory of combinational and sequential circuits.
3. Explore the use of digital logic in integrated circuit applications.
4. Acquire the design capability of digital circuits
5. Design various counters.

Course Objectives:

- To understand the need for DC and AC bridges.
- To illustrate the calibration of various instruments.
- To measure generalized constants in transmission lines.
- To learn about various measurement methods and fault detection.
- To study the reactive power variation with various loads.

List of Experiments:

4. Two Wattmeter Method of Power Measurement.
5. Determination of B-H loop in a transformer core using CRO.
6. Calibration of ammeter, voltmeter and wattmeter using DC potentiometer.
10. Cable fault detection.
12. Reactive power measurement.

Course Outcomes:

At the end of the course, students will demonstrate the ability to:
1. Measure various electrical parameters using bridges.
2. Understand the methods involved in magnetic measurements.
3. Acquire knowledge in calibrating various Energy Meters for different load conditions.
4. Investigate ABCD constants in transmission lines, detection of cable fault and RLC transients.
5. Explore the impact of real and reactive powers for constant power factor loading.

FIFTH SEMESTER

EEPC501 MICROPROCESSOR AND MICROCONTROLLER

<table>
<thead>
<tr>
<th>Course Objectives:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• To study the architecture, addressing modes and instructions set off 8085 microprocessors.</td>
</tr>
<tr>
<td>• To study the architecture, addressing modes and instructions set of 8051 microcontrollers.</td>
</tr>
<tr>
<td>• To understand Instruction Set and Programming for the processors</td>
</tr>
<tr>
<td>• To gain knowledge about interrupt, I/O and communication interface</td>
</tr>
<tr>
<td>• To know about interfacing related to various applications.</td>
</tr>
</tbody>
</table>

Unit - I: Fundamentals of programmable device - 8085

Unit - II: 8051 Architecture

Internal Block Diagram, CPU, ALU, address, data and control bus, working registers, SFRs, Clock and RESET circuits, Stack and Stack Pointer, Program Counter, I/O ports, Memory Structures, Data and Program Memory, Timing diagrams and Execution Cycles.

Unit - III: Instruction Set and Programming

Addressing modes: Introduction, Instruction syntax, Data types, Subroutines Immediate addressing, Register addressing, Direct addressing, Indirect addressing, Relative addressing, indexed addressing, Bit inherent addressing, bit direct addressing.

8051 Instruction set, Instruction timings. Data transfer instructions, Arithmetic instructions, Logical instructions, Branch instructions, Subroutine instructions, Bit manipulation instruction. Assembly language programs.

Unit - IV: Memory, I/O and communication Interfacing

Memory and I/O expansion buses, control signals, memory wait states. Interfacing of peripheral devices such as General Purpose I/O, ADC, DAC, timers,
counters, memory devices, Synchronous and Asynchronous Communication. RS232, SPI, I2C. Introduction and interfacing to protocols like Blue-tooth and Zig-bee.

**Unit - V: Interfacing and Control**

LED, LCD and Keyboard interfacing, stepper motor interfacing, D.C motor interfacing, sensor interfacing, Introduction to 16-bit microcontroller - 8097

**Text / References:**

**Course Outcomes:**

At the end of this course, students will acquire the ability to
1. Understand the fundamental of microprocessors.
2. Explore the architecture of various microcontrollers.
3. Develop assembly language programs for the processors.
4. Incorporate the memory and peripheral devices.
5. Extend the development of the microprocessor based automation system.

Course Objectives:

- To introduce the family of power semiconductor devices
- To explain the operation of different types of thyristor rectifiers
- To elucidate the theory of operation of chopper circuits
- To articulate the operation of the single phase voltage source inverters through different modulation techniques
- To bring out the switching state from the operation of a three phase voltage source inverter

Unit - I: Power switching devices

Diode, Thyristor, MOSFET, IGBT: I-V Characteristics; Firing circuit for thyristor; Voltage and current commutation of a thyristor; Gate drive circuits for MOSFET and IGBT.

Unit - II: Thyristor rectifiers

Single-phase half-wave and full-wave rectifiers, Single-phase full-bridge thyristor rectifier with R-load and highly inductive load; Three-phase full-bridge thyristor rectifier with R-load and highly inductive load; Input current wave shape and power factor.

Unit - III: DC-DC buck converter

Elementary chopper with an active switch and diode, concepts of duty ratio and average voltage, power circuit of a buck converter, analysis and waveforms at steady state, duty ratio control of output voltage. Power circuit of a boost converter, analysis and waveforms at steady state, relation between duty ratio and average output voltage.

Unit - IV: Single-phase voltage source inverter

Power circuit of single-phase voltage source inverter, switch states and instantaneous output voltage, square wave operation of the inverter, concept of average voltage over a switching cycle, bipolar sinusoidal modulation and unipolar sinusoidal modulation, modulation index and output voltage

Unit - V: Three-phase voltage source inverter

Power circuit of a three-phase voltage source inverter, switch states, instantaneous output voltages, average output voltages over a sub-cycle, three-phase sinusoidal modulation
Text/References:

Course Outcomes:

At the end of this course students will demonstrate the ability to
1. Understand the details of switching devices
2. Analyze use of thyristors in different types of rectifier circuits
3. Analyze the operation of DC-DC buck and boost converters
4. Apply the different modulation techniques to the operation of single-phase voltage source inverters
5. Analyze the operation of three phase voltage source inverters

Course Objectives:

- To develop a mathematical model for physical systems – translational and rotational system block diagram reduction techniques for obtaining transfer function.
- To study time response analysis of various standard inputs for first order and second order systems.
- To study frequency response analysis and frequency domain specification by bode plot and polar plot.
- To analyze stability of system and design of controllers
- To study the concept of controllability and observability and state space analysis. (Obtaining state equation for physical, phase and canonical variable)

Unit - I: Introduction to control problem

Unit - II: Time Response Analysis

Unit - III: Frequency-response analysis

Unit - IV: Introduction to Controller Design

Unit - V: State variable Analysis

Text/References:

Course Outcomes:
At the end of this course, students will demonstrate the ability to
1. Understand the modeling of linear-time-invariant systems using transfer function and feedback control systems.
2. Gain knowledge about time response analysis and the use of Root – loci to determine stability of systems.
3. Understand the concept of frequency response analysis.
4. Design simple feedback controllers.
5. Acquire knowledge about state variable analysis.

Course Objectives:

- Understand the fundamentals of transmission lines
- Learn the mathematical modeling and performances of transmission lines.
- Improve the voltage profile of the transmission system by determining voltage regulation and efficiency.
- To analyze the voltage distribution in insulator strings and cable for improving voltage profile.
- To understand the operation of different types of distribution systems.

Unit–I: Fundamentals of Transmission Systems

Single phase transmission - Three phase transmission - complex power - Load characteristics. Inductance of a single phase two wire line - Inductance of composite conductor lines - Inductance of three phase lines - Inductance of double circuit three phase lines - Bundled conductors - Skin effect and proximity effect.

Capacitance of a two-wire line - Capacitance of a three-phase line with equilateral spacing - Capacitance of a three-phase line with unsymmetrical spacing - Capacitance of a double circuit line - Effect of earth on transmission line capacitance.

Unit–II: Modeling and Control of Transmission Lines

Characteristics and performance of transmission lines : Representation of lines - Short lines - Medium length lines - Solution by nominal T and π methods - Calculation of sending and receiving end voltages and current - Regulation and efficiency of a transmission line - Long transmission line - Hyperbolic form of equations for long lines - ABCD constants - Ferranti effect - Tuned power lines - Equivalent circuit of a long line. Voltage control: Methods of voltage control-shunt capacitors, series capacitors, tap changing transformers and booster transformers-Sending end and receiving end power circle diagrams.

Unit–III: Mechanical Properties and Corona loss

Mechanical characteristics of transmission lines: Sag in overhead lines - the catenary curve – calculation of sag with supports at different levels - Effects of wind and ice loading - Stringing Chart-Sag Template-Equivalent span - Stringing of conductors-vibration and vibration dampers.

Corona: Theory of formation – Factors affecting corona - Critical disruptive voltage - Visual critical voltage - Corona loss - Advantages and disadvantages of corona-Methods of
reducing corona effect-Radio Interference-Inductive interference between power and communication lines.

Unit–IV: Insulators and Cables

Overhead line insulators - Types of insulators-Potential distribution over a string of suspension insulators - Methods of equalizing potential - Causes of failure of insulators-Underground Cables-Types of cables-capacitance of single core cable-Grading of cables-Power factor and heating in cables-Capacitance of three core cable.

Unit–V: Distribution Systems

Feeders, distributors and service mains: D.C. distributors - Singly fed and doubly fed two wire and three wire systems, with concentrated and uniformly distributed loads. A.C. distributor - Single phase and three phase -Division of load between lines in parallel.

Effect of Working voltage on the size of feeders and distributors - Effect of system voltage on economy - Voltage drop and efficiency of transmission-Distribution systems: Types of distribution systems - Section and size of feeders - Primary and secondary distribution - Distribution substations - Qualitative Treatment of Rural distribution and Industrial distribution

Text Books:

Reference Books:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the concepts of power systems
2. Determine the line parameters and analyze the performance of transmission lines
3. Acquire knowledge of mechanical characteristics of transmission lines
4. Analyze the concepts of distribution systems
5. Understand concept of insulation

Course Objectives:

- To understand practically the programmable devices.
- To have a sound knowledge about different categories of processors and controllers.
- To familiarize the students with the functioning of different peripheral interfacing.
- To illustrate the different processing capabilities of 8085, 8051 and 8097 practically.
- To expose the students to the programming facilities available in the lab.

LIST OF EXPERIMENTS:

1. Study of 8085 Microprocessor
   a. Finding out the largest and smallest number
   b. Sorting an array
2. Multi byte Addition and Subtraction using 8085 Microprocessor
3. Study of 8255 PPI – I/O Mode and BSR Mode
4. Serial Data Communication using USART 8251 and Timer 8253
5. Study of 8051 Microcontroller
   a. Arithmetic Operations
   b. Code Conversion
6. Stepper Motor Control using 8051 Microcontroller
7. Seven Segment LED Display using 8051 Microcontroller
8. Study of Keyboard Display Interface 8279 using 8051 Microcontroller
9. Serial Data Communication Between Two 8051 Kits
10. Timer and Counter Programming in 8051 Microcontroller
11. Study of 8097 Microcontroller
    a) Arithmetic Operations  b) Logical Operations
12. Applications of 8097 Microcontrollers
    a) DAC  b) ADC  c) PWM Generation

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the architecture and operations of microprocessors and microcontrollers.
2. Write programs for performing real world a task.
3. Validate the theoretical concepts by performing experiments in practical sessions.
4. Distinguish the various categories of programmable devices.
5. Study the different interfacing techniques available for 8085 and 8051.

Course Objectives:

- To explain the characteristics of power electronic devices.
- To train the students about the operation and uses of power converter circuits.

List of Experiments:

1. Switching characteristics of IGBT and MOSFET.
2. Performance evaluation of single-phase semi and full converters with R load.
3. Extended firing angle control of single-phase semi converter.
4. Performance evaluation of three phase semi and full converters.
5. Time ratio control of IGBT based single quadrant DC chopper.
6. Time ratio control of IGBT based two quadrant DC chopper.
8. Modulation index control of single-phase bridge inverter.
9. PWM pulse generation for power switches.
11. PSIM of AC-DC bridge converter.
12. PSIM of chopper

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Develop schemes for generation of firing pulses suitable for the power switches in converter circuits.
2. Formulate procedures for testing the operation of power converters.
3. Evaluate the performance of power converter circuits.
4. Experience the platform for simulation of power electronic circuits.
5. Acquire knowledge on characteristics of switching devices

Course Objectives:

1. To gain knowledge about the various methods involved in the position and speed control of DC machine
2. To design and investigate the performance of the PID Controllers for temperature control systems.
3. To design and develop various Compensation Schemes for a given plant.
4. To acquire knowledge about the impact of step and continuous commands applied to the Stepper Motor operating in various modes.
5. To investigate on the output performance of the linear and nonlinear analog and digital control system.

List of Experiments:

1. Potentiometer Error Detector
2. D.C Position Control System
3. D.C Speed Control System
4. PID Controller
5. Linear System Simulator
6. Temperature Control System
7. Compensation Design
8. Stepper Motor Study
9. Relay Control System
10. Digital Control System
11. Electronic PID Controller
12. AC Servo motor Position Controller
13. Phase plane Analysis of Nonlinear Control System
14. Computation of Steady State Error Caused by nonlinear systems elements

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Understand the methods involved in the position and speed control of DC machine
2. Calibrate and investigate the importance of PID Controllers for analog and temperature control systems.
3. Design and develop various Compensation Schemes for a given plant.
4. Acquire knowledge about the impact of step and continuous command on the Stepper Motor for various modes.
5. Investigate on the output performance of the linear and nonlinear analog and digital control system.

</table>
Course Objectives:

- Learn the fundamentals of power system modelling
- Understand the formation of bus impedance and bus admittance matrices.
- Learn different sparsity techniques and power flow methods.
- Impart in-depth knowledge on fault analysis using impedance matrix.
- Gain knowledge on short circuit fault analysis using admittance matrix.

Unit–I: Modelling of Power Systems Components

Representation of power system components: Single phase solution of balanced three phase networks - One line diagram - Impedance or reactance diagram - Per unit system - Per unit impedance diagram - Complex power - representation of loads.

Review of symmetrical components - Transformation of voltage, current and impedance (conventional and power invariant transformations) - Phase shift in star-delta transformers - Sequence impedance of transmission lines - Sequence impedance and sequence network of power system components (synchronous machines, loads and transformer banks) - Construction of sequence networks of a power system.

Unit–II: Bus Impedance and Admittance Matrices

Development of network matrix from graph theory - Primitive impedance and admittance matrices - Bus admittance and bus impedance matrices – Properties - Formation of bus admittance matrix by inspection and analytical methods.

Unit–III: Power Flow Analysis

Unit–IV: Fault Analysis

Short circuit of a synchronous machine on no load and on load - Algorithm for symmetrical short circuit studies - Unsymmetrical fault analysis - Single line to ground fault, line to line fault, double line to ground fault (with and without fault impedances) using sequence bus impedance matrices - Phase shift due to star-delta transformers - Current limiting reactors - Fault computations for selection of circuit breakers.

Unit–V: Short Circuit Study Based on Bus Admittance Matrix

Phase and sequence admittance matrix representation for three phase, single line to ground, line to line and double line to ground faults (through fault impedances) - Computation of currents and voltages under faulted condition using phase and sequence fault admittance models - Sparsity based short circuit studies using factors of bus admittance matrix.

Text Books :

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand and analyze power system.
2. Form power system matrices.
3. Model power system components.
4. Apply load flow analysis to an Electrical power network and interpret the results of the analysis.
5. Analyze a network under symmetrical and unsymmetrical fault conditions and interpret the results.

Course Objectives:

- To study the fundamentals of embedded systems, design paradigms and architectures.
- To study the basics of PIC Microcontroller PIC and their programming.
- To study the interfacing capabilities of PIC controllers and their Memory Organization.
- To study the ARM Architecture and their programming.
- To understand the Real Time Operating System, and Task Management.

Unit–I: Overview of Embedded Systems

Unit–II: PIC Microcontroller

Introduction to PIC microcontrollers - PIC 16C74A Architecture –Comparison of PIC with other CISC and RISC based systems- memory organization – addressing modes – instruction set – PIC programming in Assembly language.

Unit –III: Interfacing capabilities of PIC

Unit–IV: Arm Architecture and Programming

Unit–V: Operating System Overview

Text Books:

References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the architecture and its programming aspects.
2. Distinguish between the general computing system and embedded system.
3. Design real time embedded systems using the concept of RTOS.
4. Acquire knowledge about architecture, registers, instruction set of arm processor.
5. Know about operating system function, resource and task management function.

PO: Program Outcomes, CO: Course Outcomes, PSO: Program Specific Outcomes
Course Objective:

- To have hands on experience on various system studies and different techniques adapted for power system planning, operation and control.

List of Experiments:

1. Modeling of transmission lines and computation of their parameters
2. Formation of bus admittance matrix
3. Formation of bus impedance matrix
4. DC load flow analysis
5. Solution to load flow problem using Gauss-Seidel method
6. Economic load dispatch without losses
7. Single area load frequency control
8. Power flow analysis of radial distribution systems
9. Solution to load flow problem using Newton-Raphson approach
10. Fast Decoupled method for the solution of load flow problem
11. Symmetrical Short circuit analysis
12. Unsymmetrical Short circuit analysis
13. Economic load dispatch with losses

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Familiarize with analyzing the load flow problems.
2. Analyze load frequency problem.
5. Perform economic load dispatch.

Course Objectives:

- Learn the functioning of programmable processors and controllers.
- Study the basic operations of programmable processors and controllers.
- Develop processor and controller based programs.
- Study the functioning of different peripheral interfacing devices.
- Study the role of programmable devices in real-world applications.

List of Experiments:

1) Study of 89C51 Microcontroller
2) Application of 89C51 Microcontroller
   a. Frequency Measurement
   b. Boolean Operation
3) Stepper Motor Control Using 89C51 Microcontroller
4) Seven Segment LED Display Using 89C51 Microcontroller
5) Study of PIC Microcontroller 16F877
6) Application of PIC Microcontroller 16F877
   a. Seven Segment LED Display
   b. Analog to Digital Conversion
   c. PWM Generation
7) Real Time Clock Using PIC Microcontroller 16F877
8) I²C Logic Based Character Display Using PIC Microcontroller 16F877
9) Study of ARM Processor LPC2148
10) Seven Segment LED Display Using ARM Processor LPC2148
11) ADC Using ARM Processor LPC 2148
12) Study of DSP Processor TMS320C50

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Understand the architecture and operations of MICROCHIP microcontrollers.
2. Write programs in Embedded C for performing a task.
3. Validate the theoretical concepts by performing experiments in practical sessions.
4. Distinguish the various categories of programmable devices.
5. Acquire knowledge about different interfacing capabilities of 89C51, PIC and ARM7.

Course Objectives:

- To impart a wide knowledge about the components of LT system wiring components and their selection.
- To provide basic concepts regarding residential and commercial wiring systems and guidelines for their installation.
- To learn about various industrial electrical systems and their production schemes.
- To familiarize the student with different automation schemes of Industrial Electrical systems.
- To understand different types of illumination systems and methods involved in design.

Unit - I: Electrical System Components

LT system wiring components, selection of cables, wires, switches, distribution box, metering system, Tariff structure, protection components - Fuse, MCB, MCCB, ELCB, inverse current characteristics, symbols, single line diagram (SLD) of a wiring system, Contactor, Isolator, Relays, MPCB, Electric shock and Electrical safety practices.

Unit - II: Residential and Commercial Electrical Systems

Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, Earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components.

Unit - III: Industrial Electrical Systems

HT connection, industrial substation, Transformer selection, Industrial loads, motors, starting of motors, SLD, Cable and Switchgear selection, Lightning Protection, Earthing design, Power factor correction – kVAR calculations, type of compensation, Introduction to PCC, MCC panels. Specifications of LT Breakers, MCB and other LT panel components.

Unit - IV: Industrial Electrical System and Automation

DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Sizing the DG, UPS and Battery Banks, Selection of UPS and Battery Banks. Study of basic PLC, Role of in automation, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation.
Unit - V: Illumination Systems

Understanding various terms regarding light, lumen, intensity, candle power, lamp efficiency, specific consumption, glare, space to height ratio, waste light factor, depreciation factor, various illumination schemes, Incandescent lamps and modern luminaries like CFL, LED and their operation, energy saving in illumination systems, design of a lighting scheme for a residential and commercial premises, floodlighting.

Textbooks:

References:

2. Web site for IS Standards.

Course Outcomes:

At the end of this course, students will able to
1. Familiarize with different electrical wiring systems for residential, commercial and industrial consumers, representing the systems with standard symbols and drawings, SLD.
2. Understand various components of industrial electrical systems.
3. Analyze and select the proper size of various electrical system components.
4. Acquire knowledge about various industrial automation system.
5. Train and get exposed with the design of illumination system.

Course Objectives:

1. To provide the students simple hands-on-experience in the basic aspects of electrical engineering diagrams using CADD.
2. Exercises in estimating the materials and cost of materials required for pump room, industry and house wiring.
3. To use of CADD tools, vice, line, poly line, circle, ellipse, arc, break, text, hatch, etc – Simple drawing exercises relevant to electrical engineering.

List of Experiments:

1. Principles of estimation
2. Types of wiring system
3. Pump room wiring layout
4. Industrial wiring layout
5. Residential wiring layout
6. Substation layout
7. Office lighting
8. Symbols
9. Earthing
10. Insulators
11. Lamps
12. SF6 circuit breaker
13. Towers
14. Three phase four wire energy meter

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand basic tools of CADD.
2. Estimate of the materials required.
3. Draw various electrical components.
4. Acquire the designing of wiring system.
5. Understand the design of lighting schemes.

Course Objectives:

- To work on a technical topic and acquire the ability of written and oral presentation
- To acquire the ability of writing technical papers for Conferences and Journals
- To train the students in the field work related to Electrical and Electronics Engineering and to have a practical knowledge in carrying out field related works.
- To train and develop skills in solving problems during execution of certain works related to Electrical and Electronics Engineering.

The students will work for two periods per week guided by student counsellor. They will be asked to present a seminar of not less than fifteen minutes and not more than thirty minutes on any technical topic of student’s choice and to engage in discussion with audience. They will defend their presentation. A brief copy of their presentation should also be submitted. Evaluation will be done by the student counsellor based on the technical presentation and the report and also on the interaction shown during the seminar.

The students individually undergo a training program in reputed concerns in the field of Electrical and Electronics Engineering during the vacation for a minimum stipulated period of four weeks. At the end of the training, the student has to submit a detailed report on the training he/she had, within ten days from the commencement of the semester. The students will be evaluated, by a team of staff members nominated by Head of the Department, through a viva-voce examination.

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Face the audience and to interact with the audience with confidence.
2. Tackle any problem during group discussion in the corporate interviews.
3. Face the challenges in the field with confidence.
4. Manage the situation that arises during the execution of works related to Electrical and Electronics Engineering
5. Develop the ability of writing technical papers for Conferences and Journals

Course Objectives:

- To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same.
- To train the students in preparing project reports and to face reviews and viva voce examination.

Method of Evaluation:

- The students in a group of 3 to 4 works on a topic approved by the Head of the Department under the guidance of a faculty member and prepare a comprehensive project report after completing the work to the satisfaction of the supervisor.
- The progress of the project is evaluated based on a minimum of three reviews. The review committee will be constituted by the Head of the Department.
- A project report is required at the end of the semester.
- The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Take up any challenging practical problems and find solution by formulating proper methodology on completion of the project work.
2. Carry out any experimental works.
3. Understand the modeling, analysis and design.
4. prepare research papers for Conferences and journals
5. Acquire confidence to face any type of audience

Course Objectives:

- To learn about the various materials used in electrical machines and factors affecting the electrical, mechanical and thermal loadings of electrical machines.
- To understand the construction, design and cooling of transformers.
- To develop sound knowledge on the design of induction motors and study the performance characteristics.
- To familiarize with the complete design of a synchronous machine as per the requirements and constraints.
- To get exposed to the optimal design of electrical machines using software tools and techniques.

Unit - I: Introduction

Major considerations in electrical machine design, electrical engineering materials, space factor, choice of specific electrical and magnetic loadings, thermal considerations, heat flow, temperature rise, rating of machines.

Unit - II: Transformers

Sizing of a transformer, main dimensions, kVA output for single- and three-phase transformers, window space factor, overall dimensions, operating characteristics, regulation, no load current, temperature rise in transformers, design of cooling tank, methods for cooling of transformers.

Unit - III: Induction Motors

Sizing of an induction motor, main dimensions, length of air gap, rules for selecting rotor slots of squirrel cage machines, design of rotor bars & slots, design of end rings, design of wound rotor, magnetic leakage calculations, leakage reactance of polyphase machines, magnetizing current, short circuit current, circle diagram, operating characteristics.

Unit - IV: Synchronous Machines

Sizing of a synchronous machine, main dimensions, design of salient pole machines, short circuit ratio, shape of pole face, armature design, armature parameters, estimation of air gap length, design of rotor, design of damper winding, determination of full load field mmf, design of field winding, design of turbo alternators, rotor design.
Unit - V: Computer aided Design (CAD):

Limitations (assumptions) of traditional designs, need for CAD analysis, synthesis and hybrid methods, design optimization methods, variables, constraints and objective function, problem formulation. Introduction to FEM based machine design. Introduction to complex structures of modern machines-PMSMs, BLDCs, SRM and claw-pole machines.

Text / References:

7. Electrical machines and equipment design exercise examples using Ansoft’s Maxwell 2D machine design package.

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the various factors which influence the design of electrical machines and select proper material for the design.
2. Design a transformer and estimate its performance characteristics.
3. Relate the output power of an induction motor with its main dimensions and design squirrel cage and slip ring induction motors.
4. Obtain the optimal design of a synchronous machine as per the requirements and constraints specified.
5. Apply software tools to do design calculations.

Course Objectives:

- To gain knowledge about the Electrical energy Scenario.
- To study the various forms of energy and its Basic.
- To impart knowledge about Energy Efficiency of Electrical Systems.
- To Familiarize Energy Efficient Technologies in Electrical systems.
- To inculcate the feasibility of Energy Management and Audit.

Unit - I: Energy Scenario

Commercial and Non-commercial energy, primary energy resources, commercial energy production, final energy consumption, energy needs of growing economy, long term energy scenario, energy pricing, energy sector reforms, energy and environment, energy security, energy conservation and its importance, restructuring of the energy supply sector, energy strategy for the future, air pollution, climate change. Energy Conservation Act-2001 and its features.

Unit - II: Basics of Energy and its various forms

Electricity tariff, load management and maximum demand control, power factor improvement, selection & location of capacitors, Thermal Basics-fuels, thermal energy contents of fuel, temperature & pressure, heat capacity, sensible and latent heat, evaporation, condensation, steam, moist air and humidity & heat transfer, units and conversion.

Unit - III: Energy Efficiency in Electrical Systems

Unit - IV: Energy Efficient Technologies in Electrical Systems

Maximum demand controllers, automatic power factor controllers, energy efficient motors, soft starters with energy saver, variable speed drives, energy efficient transformers, electronic ballast, occupancy sensors, energy efficient lighting controls, energy saving potential of each technology.

Unit - V: Energy Management & Audit

Definition, energy audit, need, types of energy audit. Energy management (audit) approach- understanding energy costs, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirements, fuel & energy substitution, energy audit instruments. Material and Energy balance: Facility as an energy system, methods for preparing process flow, material and energy balance diagrams.

Text/References:

2. Success stories of Energy Conservation by BEE, New Delhi(www.bee-india.org)

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Gain knowledge on the current energy scenario and the importance of energy conservation.
2. Comprehend the various forms of energy.
3. Familiarize the concepts of energy efficiency of electrical systems and energy management.
4. Acquire awareness of the methods adopted for improving energy efficiency in various electrical systems.
5. Understand the basic concepts and implementation schemes of energy audit and energy management.

Course Objectives:

- To introduce the basics of electric drives
- To explain the operation of phase controlled DC drives
- To elucidate the theory of chopper fed DC motor drives
- To explain the different speed control mechanisms for induction motor drives
- To articulate the theory for operating synchronous motor and special machine drives.

Unit–I: Performance of Electric Drives

Electric Drives – Types of electric drives - Characteristics of Electric Drives - Advantages of electric drives - speed torque characteristics of various types of loads and drive motors - Joint speed torque characteristics - Selection of power rating for drive motors based on thermal limits, overload capacity and load variation factors.

Unit–II: Phase Controlled DC Drives

Solid state Drives : Introduction - comparison between solid state and conventional drives - open loop and closed loop speed control - DC motor transfer function - speed and current control loops - converter fed DC drives (using thyristors) - single, two and four quadrant operations - Reversible drives - Armature and field current reversal - Dynamic and regenerative braking.

Unit–III: Chopper Controlled DC Drives (Using Devices other than Thyristors)

Unit–IV: Induction Motor Drives (Using Devices other than Thyristors)

Speed control of three phase induction motor - stator voltage and frequency control – V/F control - Rotor control - static control of rotor resistance using DC chopper - slip power recovery scheme – Static Kramer and Schermic’s drives.

Unit–V: Synchronous Motor and Special Machine Drives

Speed control of synchronous motors - modes of operation - Adjustable frequency operation - controlled current operation - voltage source inverter and current source inverter fed synchronous motor drive - PWM inverter fed synchronous motor drives – cycle converter fed synchronous motor drives Special Machines Drives (qualitative treatment) – Principle of
operation, Torque speed characteristics of Switched reluctance, Brush less DC and Permanent Magnet Synchronous Motor drives.

Text Books:

References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Understand the basics of electric drives
2. Analyze the operation of phase-controlled dc drives
3. Apply the theory of self commutated switches to the operation of chopper fed drives
4. Analyze the speed control mechanisms for induction motor drives
5. Understand the operation of synchronous motor and special machine drives

Course Objectives:

- To understand the fundamental concepts, principles, analysis and design of hybrid and electric vehicles.
- To acquire knowledge on the social and environmental importance, basic concepts and configuration of hybrid EV and electric driven train.
- To study various types of electric machines and energy storage devices used in hybrid and electric drive and to study the configuration and control of various electrical machines.
- To learn in detail about the Energy Storage Requirements in Hybrid and Electric Vehicles apart from the communication and supporting subsystems used.
- To understand the design of different energy management strategies, implementation issues in hybrid electric vehicle and battery electric vehicle.

Unit - I: Introduction

Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance.

Unit-II: Hybrid Vehicles

Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

Unit - III: Electric Trains

Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis. Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.
Unit - IV: Energy Storage

Energy Storage: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices. Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems

Unit - V: Energy Management Strategies

Text / References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the models to describe hybrid vehicles and their performance.
2. Identify the different possible strategies in hybridization of EV.
3. Know the various topologies of electric drive and its control.
4. Familiarize the different strategies related to energy storage systems.
5. Gain knowledge about different energy management strategies adopted for EV.

Course Objectives:

- To study the wind speed statistics and probability distributions
- To understand various wind generator topologies
- To study the various solar resources and estimation of solar energy availability
- To study the power electronics converters and MPPT
- To analyze the hybrid and isolated operation of solar PV and wind systems

Unit - I: Physics of Wind Power:

History of wind power, Indian and Global statistics, Wind physics, Betz limit, Tip speed ratio, stall and pitch control, Wind speed statistics-probability distributions, Wind speed and power-cumulative distribution functions.

Unit - II: Wind Generator Topologies:

Unit - III: Solar Resources:

Introduction, solar radiation spectra, solar geometry, Earth Sun angles, observer Sun angles, solar day length, Estimation of solar energy availability.

Unit - IV: Solar Photovoltaic:

Technologies-Amorphous, mono crystalline, polycrystalline; V-I characteristics of a PV cell, PV Unit, array, Power Electronic Converters for Solar Systems, Maximum Power Point Tracking (MPPT) algorithms. Converter Control.

Unit - V: Network Integration Issues:

Text / References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Comprehend the energy scenario and the consequent growth of the power generation from renewable energy sources.
2. Gain knowledge about the basic physics of wind and solar power generation.
3. Familiarize the power electronic interfaces for wind and solar generation.
4. Understand the concept of solar photovoltaic power generation.
5. Acquire awareness about the issues related to the grid-integration of solar and wind energy systems.

Course Objectives:

- To represent the discrete system using different equations
- To study Z and inverse Z transforms
- To understand DFT and FFT
- To design FIR filters & IIR filters
- To Study the application of Digital signal processing

Unit - I: Discrete-time signals and systems

Discrete time signals and systems: Sequences; representation of signals on orthogonal basis; Representation of discrete systems using difference equations, Sampling and reconstruction of signals aliasing; Sampling theorem and Nyquist rate.

Unit - II: Z-transform

Unit - III: Discrete Fourier Transform

Unit - IV: Design of Digital filters

Unit – V: Digital Signal Processors

Text/Reference Books:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Represent signals mathematically in continuous and discrete-time, and in the frequency domain.
2. Analyze discrete-time systems using z-transform.
3. Understand the Discrete-Fourier Transform (DFT) and the FFT algorithms.
4. Design digital filters for various applications.
5. Apply digital signal processing for the analysis of real-life signals.

Course Objectives:

- To study the effect of gain on transient and steady state response
- To understand the concept of different compensators in time domain
- To analyze a steady state and transient response with compensator in frequency domain
- To study the different controllers for first, second & third order systems
- To understand controllability & observability

Unit - I: Design Specifications

Introduction to design problem and philosophy. Introduction to time domain and frequency domain design specification and its physical relevance. Effect of gain on transient and steady state response. Effect of addition of pole on system performance. Effect of addition of zero on system response.

Unit - II: Design of Classical Control System in the time domain

Unit - III: Design of Classical Control System in frequency domain

Compensator design in frequency domain to improve steady state and transient response. Feedback and Feed forward compensator design using bode diagram.

Unit - IV: Design of PID controllers

Design of P, PI, PD and PID controllers in time domain and frequency domain for first, second and third order systems. Control loop with auxiliary feedback – Feed forward control.

Unit - V: Control System Design in state space

Text / Reference Books:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Study various design specifications.
2. Design classical control system in time domain
3. Design classical control system in frequency domain.
4. Analyze the controllers to satisfy the desired design specifications using simple controller structures (P, PI, PID, compensators).
5. Understand controllers using state-space approach.

Course Objectives:

- To introduce the building blocks of computer organization
- To study about Input – output organization
- To impart the knowledge about 16 and 32 bit microprocessors
- To illustrate the concept of pipelining
- To discuss the features of different architectures

Unit - I: Introduction to computer organization

Architecture and function of general computer system, CISC Vs RISC, Data types, Integer Arithmetic - Multiplication, Division, Fixed and Floating-point representation and arithmetic, Control unit operation, Hardware implementation of CPU with Micro instruction, microprogramming, System buses, Multi-bus organization. System memory, Cache memory - types and organization, Virtual memory and its implementation, Memory management unit, Magnetic Hard disks, Optical Disks.

Unit - II: Input – output Organization

Unit - III: 16 bit and 32-bit microprocessors

80x86 Architecture, IA – 32 and IA – 64, Programming model, Concurrent operation of EU and BIU, Real mode addressing, Segmentation, addressing modes of 80x86, Instruction set of 80x86, I/O addressing in80x86.

Unit - IV: Pipelining

Introduction to pipelining, Instruction level pipelining (ILP), compiler techniques for ILP, Data hazards, Dynamic scheduling, Dependability, Branch cost, Branch Prediction, Influence on instruction set.

Unit - V: Different Architectures

VLIW Architecture, DSP Architecture, SoC architecture, MIPS Processor and programming.
Text/Reference Books:

Course Outcomes:

At the end of this course, students will be able to

1. Understand the architecture and functions of the computer system.
2. Discuss the features of various I/O interfaces and select the required I/O for a particular objective.
3. Understand the concepts of microprocessors, their principles and practices.
4. Analyze the task and develop the assembly language program using 8086 instruction set.
5. Differentiate processor architectures like VLIW, DSP, SOC and their suitability for the desired application.

Mapping with Program Outcomes
Course Objectives:

- To impart knowledge on different components of protection system.
- To discuss different types of faults, overcurrent protection and relay coordination.
- To explain various equipment protection schemes.
- To study computer aided protection schemes.
- To understand various system protection and application of wide area measurement system.

Unit – I: Protective Relaying Schemes

Functional characteristics of a protective relay - operating principles of relays - over current relays - instantaneous and time over current relays - definite time and inverse time characteristics - Direct over current relay - Directional over current relay - universal torque equation - performance characteristics of distance relays - differential relays - under frequency and over frequency relays - translay scheme - HRC fuses for relays.

Unit – II: Circuit Breakers

Unit – III: Protection Schemes

Feeder protection - distance protection - alternator protection - short circuit protection of stator windings by percentage differential relays - protection against turn to turn faults in stator winding - field ground fault protection - protection of stator windings by overvoltage relays - protection against stator open circuits, loss of synchronism, loss of excitation, rotor overheating - protection of transformers - typical schemes - motor protection - Bus bar protection schemes.

Unit – IV: Digital Protection

Unit - V: System Protection

Text/References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Study the different components of a protection system.
2. Understand the operation of circuit breakers.
3. Analyze the protection schemes for different power system components.
4. Impart basic principles of digital protection.
5. Understand system protection schemes and the use of wide-area measurements.

**Course Objectives:**

- To study HVAC and HVDC for overhead and underground transmission systems and factors governing the choice of them.
- To learn about the bundle conductors and reducing the corona loss.
- To introduce the problems of EHVAC transmission at power frequency and compensation.
- To introduce modern developments in HVDC transmission and FACTS.
- To learn about the overvoltage problem, cables and insulation in extra high voltage system.

**Unit–I: Introduction to EHVAC and HVDC Transmission**

EHVAC and HVDC transmission -Comparison between HVAC and HVDC overhead and underground transmission scheme - Standard transmission voltages - Factors concerning choice of HVAC and HVDC transmission - Block diagram of HVAC and HVDC transmission schemes.

**Unit–II: Corona**

Properties of bundled conductors - Inductance and capacitance of EHV line - Surface voltage gradient on single, double, and more than three conductor bundles -Corona effects - Power loss - Increase in radius of conductors - Charge-voltage diagram - Qualitative study of corona pulses, their generation and properties.

**Unit–III: EHVAC Transmission**

Problems of EHVAC transmission at power frequency - Generalized constants - Power circle diagram and its use - Voltage control using compensators - High phase order transmission.

**Unit–IV: DC Transmission**

Review of rectification and inversion process -Constant current and constant extinction angle modes of operations - Analysis of DC transmission systems -Harmonics on AC and DC sides and filters for their suppression - Multiterminal DC transmission systems -Parallel operation of AC and DC transmission - Modern developments in HVDC transmission/Introduction to FACTS.
Unit–V: Overvoltage in EHV Systems

Origin and types - Ferro resonance overvoltage - switching surges, reduction of switching surges on EHV systems. Introduction to EHV cable transmission, electrical characteristics of EHV cables, properties of cable insulation materials. EHV insulators - characteristics and pollution performance -Protection of HVAC and HVDC systems.

Text Books:

Reference:

Course Outcomes:

1. Understand the factors governing the choice of HVAC and HVDC for overhead and underground transmission system.
2. Learn about bundled conductors and corona loss.
3. Analyze the problem of EHVAC transmission at power frequency and compensation.
4. Learn the DC transmission system in case of harmonics and as well as multi-terminal DC transmission system.
5. Impart the knowledge of over voltage problem cables and insulating materials.

Course Objectives:

- To study economic dispatch techniques of power system.
- To understand optimal power flow methods.
- To familiarize different unit commitment methods.
- To design and implement load-frequency controller and its dynamics.
- To gain knowledge about transient stability in the power system.

Unit–I: Economic Load Dispatch

System constraints - Economic dispatch neglecting losses - Optimum load dispatch including transmission losses - Exact transmission loss formula - Modified co-ordination equations – hydro-thermal scheduling

Unit–II: Optimal Load Flow

Unit–III: Unit Commitment

Unit–IV: Load Frequency Control

Necessity of maintaining frequency constant- Load Frequency Control (Single Area Case)-Turbine Speed Governing System-Model of Speed Governing System-Turbine Model-Generator-Load Model-Block Diagram model of LFC-Steady State Analysis-Dynamic Response-Control Area Concept-Proportional plus Integral Control-Optimal Control-State variable model of single area and two-area power systems

Unit–V: Transient Stability Studies

Transient stability - Power angle curve and swing equation of single machine connected to infinite bus - Equal area criterion - Numerical solution of swing equation of single-machine system by point by point method - Factors affecting transient stability - Multi machine transient stability - solution techniques using modified Euler and Nekota methods
Text Books:

Reference Books:

Course Outcomes:

At the end of the course, the students will be able to:

1. understand the economic operation of power system operation.
2. Enhance skills to develop the policies for optimal load flow using various methodologies.
3. Design Unit Commitment under various strategies.
4. Gain knowledge in load-frequency control and in designing various types of Controllers.
5. Learn the analysis of the transient stability for power system using various techniques.

Course Objectives:

- To give an exposure of different types of analog modulation techniques and their significances in communication systems.
- To familiarize the students about angle modulation techniques in communication systems.
- To introduce pulse modulation techniques.
- To introduce the concepts of Pulse Code Modulation techniques and multiple access techniques used in communication systems for enhancing the number of users.
- To focus on various media for digital communication and future data communication.

Unit–I: Linear Modulation / Demodulation

Need for modulation – Amplitude modulation - Power spectrum - Power relation – Different types of modulation - Double sideband suppressed carrier (DSB/SC), Single sideband suppressed carrier (SSB) and Vestigial sideband (VSB) generation. AM transmitters - Block diagram - Amplitude demodulation -Detection of DSB, SSB signals - Receiver characteristics - Super heterodyne reception - Automatic volume control.

Unit–II: Angle Modulation

Unit–III: Pulse Modulation

Analog and digital communication systems and techniques: Pulse modulation systems - Sampling Theorem-Pulse amplitude modulation –Channel Bandwidth-Detection of PAM signals - Cross talk in PAM signals-Pulse time modulation - Generation of PDM and PPM- Conversion of PDM to PPM - Detection of PTM signals-Cross talk in PTM signals.

Unit–IV: Pulse Code Modulation Systems

Quantization - Compounding –Pulse code modulation - Sampling and digitizing - Aliasing-Sample and hold circuit – Practical implementation of sampling and digitizing - Equalization - Multiplexing-Frequency Division Multiplexing (FDM) and Time Division Multiplexing (TDM)-Data communications –Serial synchronous, a synchronous communication protocol-Hardware USARTS –Software USART.
Unit–V: Wireless Communication Systems

Evolution of generations (1G, 2G, 2.5, 3G, 4G and beyond 4G), - GSM and CDMA systems-cellular structure-frequency reuse-Handoff-Bluetooth and UWB network-Wi-Fi and Wi-Max. (Quantitative treatment only)

Course Objectives:

- To provide an understanding of VLSI Design process and to bring both system and circuit view on design together.
- To familiarize the MOS circuit realization of the various building blocks that is common to any microprocessor or digital VLSI circuit.
- To learn transistor level CMOS logic design and to understand NMOS and CMOS Logic Design: Static characteristics of CMOS Inverter, Dynamic behaviour of CMOS inverter-static and dynamic power dissipation in CMOS – Basic and Complex gates realization in CMOS-Transistor sizing-Sheet resistance and area capacitance of layers-Wiring capacitance-Driving large capacitive loads.
- To impart knowledge about designing digital circuits like adders and multipliers.
- To study programming technologies and architectures of FPGAs and understand the concepts of modelling a digital system using VHDL.

Unit–I: VLSI Design Concepts

Unit–II: VLSI Fabrication Techniques

Unit–III: Analog VLSI

Unit–IV: Digital VLSI

Logic design: Switch logic and Gate logic - Dynamic CMOS logic - Structured design examples: Simple combinational logic and Clocked sequential design. Sub-system design:

Unit–V: Programmable ASCIS and VHDL

Text Books:

Reference Books:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Provide comprehensive idea about the techniques of chip design using programmable devices.
2. Analyze VLSI systems, VHDL and MOS circuit realization of the various building blocks that is common to any microprocessor or digital VLSI circuit.
3. Design and analyze of analog circuit
4. Design and analyze digital circuits like multipliers, adders and understand the architecture and programming technologies of FPGA.
5. Model a simple digital system using VHDL.

Course Objectives:

- This course intends to provide a conceptual understanding of micro fabrication techniques and the issues surrounding them.
- To know the major classes, components and applications of MEMS devices/systems and to demonstrate an understanding of the fundamental principles behind the operation of these devices/systems.
- To learn Bulk micromachining process and to understand the concept of different etching process and etching materials in fabrication process.
- To impart knowledge about surface micromachining process and to understand the types and concept of bonding process.
- To study and design of different types of MEMS actuators, Micro grippers, MEMS resonators and their applications.

Introduction to Micro Machined Devices

Microsystems vs. MEMS - Markets for Microsystems and MEMS, Scaling Principles-Materials for micromachining, Micromaching terms- mechanical properties of silicon-native oxides of silicon and other semiconductors-typical silicon wafer types.

Bulk Micro Machining

Surface Micromachining

Bonding Processes

Anodic Bonding-Anodic bonding using deposited glass-silicon fusion bonding-other bonding and techniques - compound processes using bonding. Sacrificial Processes and other
Techniques: Sticking problem during wet releasing prevention of sticking-phase change release methods-geometry-examples of sacrificial processes.

**Mems Actuators and Their Applications**

**References:**

5. Tai-Ran-Hsu, MEMS & Microsystems Design and Manufacture, Tata McGrawHill, New Delhi, 2002

**Course Outcomes:**

1. Understand the concept of scaling laws that are used extensively in the design of micro devices and systems.
2. Analyze the basic principles and applications of micro-fabrication processes, such as photolithography, ion implantation, diffusion, oxidation, CVD, PVD, and etching.
3. Impart knowledge about thin film process and etchants used for isotropic and anisotropic etching.
5. Understand the types of bonding process and the techniques used for MEMS

Course Objectives:

- To impart knowledge about safety requirements
- To provide guidance on prevention of electrical shocks
- To study about various first aid methods
- To create awareness about various Hazardous areas
- To familiarize with safety management

Unit–I: Introduction

General Background-Objectives of safety and security measures-Hazards associated with electric current and voltage-principles of electrical safety- Approaches to Prevent Accidents- Fire Prevention and Fire Fighting-Objectives and scope of IE act and IE rules-
General requirements for electrical safety as per IE rules

Unit–II: Electrical Shocks and their Prevention

Unit–III: First Aid

Unit–IV: Electrical Safety in Hazardous Areas

Introduction-Classification of Hazardous zones-causes of sparks and flashovers in electrical plants and machines-functional requirements of electrical equipment and installations for hazardous area/zones-classification of equipment/enclosure for hazardous locations.
Unit–V: Electrical Safety Management

Introduction-Principles of safety management-management’s safety policy-safety organization-organization charts for construction phase of a project, maintenance mode of a plant and for safety department – safety auditing-training and supervision-annual reports -motivation to managers, supervisors and employees.

Text Books:

ANNAMALAI UNIVERSITY 165 FEAT
Course Objectives:

- To emphasize on power generation technology using conventional and non-conventional energy sources
- To create an understanding of conversion of various forms of energy to electrical energy.
- To highlight the operation and major components of electric generating plants.
- To highlight the operation and major components of hydro power plant.
- To introduce to the basics of Tariff structure for energy production.

Unit – I: Thermal, Gas and Diesel Power Plants

Thermal Power Plant: Plant layout, Components of thermal power plant, Advantages and disadvantages, choice of site.

Gas Turbine Power Plants: Plant layout, advantages and disadvantages, Applications, Open cycle and closed cycle gas turbine power plant, combined cycle power plant, Comparison with steam power plants.

Diesel power plant: Plant Layout, advantages and disadvantages, Applications, Choice and characteristic of diesel engines, auxiliaries.

Unit – II: Hydro Power Plant

Advantages and disadvantages, choice of site, Classification, Schematic arrangement, constituents of hydro power plant, Hydro turbines, Economics of small hydro schemes, Pumped storage plants, types, Advantages.

Unit – III: Nuclear Power Plant

Location and size selection, Layout and components of Nuclear Power Plants, Nuclear reactors-types and applications, Safety measures for Nuclear Power Plants-Radiation shielding, Radioactive and waste disposal.

Unit- IV: Power from Renewable Energy

Principle, Construction, working and types of Wind, Tidal, Solar Photo Voltaic (SPV), Solar Thermal, Geo Thermal, Biogas, Fuel Cell and Magneto-Hydro dynamic system.
Unit-V: Power Plant Economics and Tariffs

Factors affecting cost of generation, Selection of type of generation and generation equipment, Load curve, load duration curve, Effect of load on power plant design, tariffs, depreciation, causes and effects of low power factor and its improvement.

Text Books:

References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Know different types of power plants, their functions and issues related to them.
2. Understand the significance of Hydro Energy and its economical benefits.
3. Understand the principle of operation and performance of various nuclear reactors and their impact on environment.
4. Understand the importance of renewable energy sources as an alternative to energy crisis.
5. Learn the basics of Tariff structure for energy production.

Course Objectives:

- To introduce the basic concepts of conducting materials.
- To understand the properties of semiconducting, magnetic and dielectric materials.
- To study the properties and applications of optical materials.
- To learn the new materials used in communication engineering.

Unit–I: Conducting Materials

Classical free electron theory - electrical conductivity - drawbacks of classical theory - quantum free electron theory of metals and its importance - density of energy states - Fermi-Dirac statistics - calculation of Fermi energy and its importance - concept of hole – energy bands in solids (qualitative treatment only) - effective mass of electron - high resistivity materials, superconductors-properties and applications.

Unit–II: Semiconducting Materials

Elemental and compound semiconductors and their properties - carrier concentration intrinsic semiconductors - carrier concentration in n-type and p-type semiconductors - variation of Fermi level and carrier concentration with temperature - Hall effect – applications.

Unit–III: Magnetic and Dielectric Materials

Different types of magnetic materials and their properties - domain theory of ferromagnetism - Heisenberg criteria - Hysteresis energy product of a magnetic material - merits and their applications - magnetic recording materials-metallic glasses - Dielectrics - Fundamental definitions - different types of electric polarization - dielectric loss – properties and different types of insulating materials - active and passive dielectrics and their applications - Ferro electrics – Piezo-electrics.

Unit–IV: Optical Materials

Optical properties of metals, insulators and semiconductors - phosphorescence and fluorescence - excitons, traps and colour centres and their importance - different phosphors used in CRO screens - liquid crystal as display material - Thermography and its applications - photoconductivity and photo conducting materials.

Unit–V: New Engineering Materials

- Optical phase conjugation - Solitons - Nuclear engineering materials - IC packaging material.

**Text Books:**

**References:**

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

1. Understand the concept of conducting materials.
2. Realize the properties of semiconducting, magnetic, dielectric and optical materials.
3. Realize the properties of magnetic and dielectric materials
4. Know the importance of optical materials in electrical engineering field.
5. Introduce new engineering materials in electrical engineering.

Course Objectives:

- To familiarize the students with the various architectures and learning algorithms of Artificial Neural Network.
- To make the students to understand the basis of classifying neural networks and suitability for different applications.
- To enable the students to acquire knowledge on Fuzzy logic and their operations.
- To acquire the ability of designing Fuzzy logic controllers and Neuro Controllers.
- To introduce the concept of genetic algorithm and its operators.

Unit–I: Artificial Neural Networks

Unit – II: Neural Network Architecture and Algorithms

Unit – III: Fuzzy Logic

Unit – IV: Fuzzy Logic Controller

Unit – V: Genetic Algorithm

Text Books:

References:

Course Outcomes:

At the end of this course, students will be able to
1. Analyze and select a suitable technique for the particular problem domain.
2. Recognize the merits and demerits of applying a particular ANN model for a particular problem.
3. Design and apply fuzzy Logic based reasoning to handle uncertainty in engineering problems.
5. Solve combinatorial optimization problems using genetic algorithm.

Course Objectives:

- To give an exposure to the physiology and anatomy of human system.
- To familiarize the students about the bio-potential electrodes and amplifiers used in biomedical engineering.
- To learn the various types of biological transducers used in medical engineering field for signal acquisition.
- To focus on various cardiovascular, respiratory therapy equipments used in medical field.
- To familiarize the students about recent trends in medical imaging.

Unit–I: Electrophysiology

Unit–II: Bioelectric Signal Acquisition

Biomedical Instrumentation-Classification-design factors of biomedical instrumentation-Bio potential amplifiers - Instrumentation amplifier –Carrier amplifiers – Chopper Amplifiers-Microprocessor/Microcontroller based instrumentation - Telemetry - Safety of biomedical equipments.

Unit–III: Bioelectric Potential and Cardiovascular Measurements

Unit–IV: Respiratory, Pulmonary Measurements and Rehabilitation

Physiology of respiratory system - respiratory rate measurement - Temperature - Pulmonary function measurement - Oximeter –Audiometers-types- Hearing aids - Functional neuromuscular stimulation - Physiotherapy - Diathermy -Nerve simulator/pain killer.
Unit–V: Recent Trends in Medical Imaging

Medical imaging - LASER applications in medical field - Ultrasound scanner - Echo cardiograph - CT scan -Magnetic Resonance Imaging (MRI) –X-Ray imaging using special techniques- Holter monitoring.

Text Books:

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Explain the anatomy and physiology of various subsystems of human body.
2. Provide idea about different types of physiological transducers used in medical engineering which can be used to acquire biological signals from the human body
3. Gain knowledge about acquiring biological signal and the safety features to be incorporated
4. Understand the principles of cardiovascular, respiratory and therapeutic assisting devices used in bio-medical field.
5. Describe the recent trends used in medical imaging.

Mapping with Program Outcomes
Course Objectives:

- To study about the different systems of electric traction
- To introduce the energy saving concept by different ways of illumination.
- To explore the utilisation of electrical energy for heating and welding
- To provide basic knowledge about Refrigeration and Air-conditioning
- To expose the students to the economics of Electrical Energy Utilization

Unit – I: Electric Drives and Traction

Unit – II: Illumination

Unit – III: Heating and Welding

Unit – IV: Refrigeration and Air Conditioning

Unit – V: Economics of Electrical Energy Utilization

Economics of Electric power supply – General rule for charging the energy – Economical cross section of a conductor – Ratings of a motor – temperature rise in a motor – power factor improvement– Economic choice of equipment – energy management – energy auditing
Text Books:

References:

Course Outcomes:

At the end of this course the students will be able to

1. Know about different type of electric drives and systems employed in electric traction.
2. Understand the various lamps and design illumination schemes.
3. Acquire the knowledge of existing methods used for heating and welding.
4. Familiarize the concepts and theory of refrigeration and air conditioning.
5. Analyze the various energy saving methods.

Course Objectives:

- To introduce various aspects of power system operation, stability and control
- To discuss about the analysis of linear dynamical system and various numerical integration techniques.
- To analyze the modeling of synchronous machines and associated controllers in detail
- To explain the modeling of various power system components
- To understand various types of stability analysis of power system.

Unit - I: Introduction to Power System Operations

Unit - II: Analysis of Linear Dynamical System and Numerical Methods

Unit - III: Modeling of Synchronous Machines and Associated Controllers

Unit - IV: Modeling of other Power System Components

Unit - V: Stability Analysis

**Text/References:**

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

1. Understand basic power system operation
2. Understand the problem of power system stability and its impact on the system.
3. Analyze linear dynamical systems and use of numerical integration methods.
4. Model different power system components for the study of stability.
5. Understand the methods to improve stability.

Course Objectives:

1. To understand the fundamentals of restructured power systems
2. To learn the significance of Independent System Operator
3. To impart knowledge on transmission open access and pricing
4. To know about the ancillary services and their management
5. To study about the power system analysis under market environment.

Unit–I: Introduction to Restructuring

Unit–II: Power System Operation in Competitive Environment

Unit–III: Transmission Open Access and Pricing

Unit–IV: Ancillary Services Management

General Description of Some Ancillary Services-Frequency Control-Reserves Services-Reactive power and voltage control service-Black start capability service- Scheduling and Dispatch Services- Synchronous Generators as Ancillary Service Providers.

Unit–V: Power System Analysis in Market Environment

Text Books:

References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the difference between traditional and restructured power systems
2. Understand about various entities involved in power markets.
3. Familiarize with transmission open access and electricity pricing
4. Understand various ancillary services management
5. Understand the power system analysis under market environment

Course Objectives:

- To provide knowledge on FACTS controllers, emphasize the need for controllers and introduce the basic varieties of compensators.
- To convey the significance of FACTS which involves power electronics interface.
- To describe how FACTS controllers can provide controllability of Voltage, Impedance, Reactive power, active power and enhance stability.
- To study the characteristics, modeling and operating schemes of different types of shunt and series switched reactive power generating devices.
- To familiarize the reader about the modeling aspects of emerging FACTS controllers and analyze their performance in unbalanced A.C systems. Also to know about various techniques for co-ordination of the different FACTS controllers and algorithm for their effective operation.

Unit - I: Classification of Compensators

Unit–II: Static VAR Compensators (SVC)

Unit–III: Static Series Compensators (SSC)

Objectives of Series Compensation – Variable impedance type Series Compensators – Modeling and operating control schemes of TSSC, TCSC – Variable reactance model – Switching Converter type Series Compensators – Model and Operating Control scheme of SSSC – Capability to provide real power Compensation.

Unit–IV: Emerging Facts Controllers

Static Synchronous Compensator (STATCOM) – Transfer function model – Dynamic performance – Capability to exchange real power – Operation in unbalanced ac systems – Comparison between STATCOM and SVC – Special purpose FACTS Controller – NGH-SSR Damping Scheme – Thyristor Controlled Braking resistor.
Unit–V: Coordination of FACTS Controllers

Text Books:

References:

Course Outcomes:
At the end of this course, students will able to
1. Conceptualize the different methods adopted in power system control and Learn the classification of compensators along with its application
2. Learn the characteristics, modeling and operating schemes of different types of shunt and series switched reactive power generating devices.
3. Familiarize with all types of compensators and know their significance.
4. Equip with basic procedure of FACTS controller design and get exposed with emerging facts controllers
5. Build an enhanced knowledge of how to realize control strategies to ensure a smooth transfer of power with improved performance indices.

Course Objectives:

- To study the basic functional issues in power quality issues
- To analyze the impact of various types of loads in different types of power system.
- To learn the effects of load compensation methods to mitigate the power quality problems.
- To comprehend the importance of shunt compensator and the need for DSTATCOM
- To investigate the advantages of using Unified power quality conditioner for power quality improvement.

Unit–I: Fundamentals of Power Quality

Characterization of Electric Power Quality: Transients- short duration and long duration voltage variations Voltage imbalance, waveform distortion, Voltage fluctuations, Power frequency variation, Power acceptability curves – power quality problems, Non linear and unbalanced loads, DC offset in loads, Notching in load voltage, Disturbance in supply voltage – Power quality standards.

Unit–II: Analysis of Single Phase and Three Phase System

Unit–III: Conventional Load Compensation Methods

Unit–IV: Load Compensation Using DSTATCOM

Compensating single phase loads – Ideal three phase shunt compensator structure – generating reference currents using instantaneous PQ theory – Instantaneous symmetrical components theory – Generating reference currents when the source is unbalanced – Realization and control of DSTATCOM – DSTATCOM in Voltage control mode
Unit – V: Series Compensation of Power Distribution System

Text Books:

References:

Course Outcomes:
At the end of this course, students will demonstrate the ability to
1. Familiarize with the basic concepts of power quality standards and issues
2. Understand and analyze single phase and three phase system with various types of loads
3. Gain knowledge with the use of various load compensating methods compute the concept of improving the power quality to sensitive load by various mitigating methods.
4. Identify the schemes for load compensation using DSTATCON
5. Acquire awareness about DVR and the impact of Unified power quality conditioner for power quality issues.

Course Objectives:

- To understand the basic physics related to various breakdown processes in solid, liquid and gaseous insulating materials.
- To gain knowledge of generation and measurement of D.C., A.C., & Impulse voltages.
- To introduce the concept of H.V tests on H.V. equipment and on insulating materials, as per the standards.
- To explain how over-voltages arise in a power system, and protection against these overvoltage’s.

Unit-I: Breakdown in Gases

Ionization processes and de-ionization processes, Types of Discharge, Gases as insulating materials, Breakdown in Uniform gap, non-uniform gaps, Townsend’s theory, Streamer mechanism, Corona discharge

Unit-II: Breakdown in liquid and solid Insulating materials

Breakdown in pure and commercial liquids, Solid dielectrics and composite dielectrics, intrinsic breakdown, electromechanical breakdown and thermal breakdown, Partial discharge, applications of insulating materials.

Unit-III: Generation and measurements of High Voltages

Generation of high voltages, generation of high D.C. and A.C. voltages, generation of impulse voltages, generation of impulse currents, tripping and control of impulse generators. Measurements: Peak voltage, impulse voltage and high direct current measurement method, measurement of dielectric constant and loss factor, partial discharge measurements.

Unit-IV: Lightning and Switching Over-voltages

Charge formation in clouds, Stepped leader, Dart leader, Lightning Surges. Switching over-voltages, Protection against over-voltages, Surge diverters, Surge modifiers.

Unit-V: High Voltage Testing of Electrical Apparatus

Various standards for HV Testing of electrical apparatus, IS, IEC standards, Testing of insulators and bushings, testing of isolators and circuit breakers, testing of cables, power transformers and some high voltage equipment, High voltage laboratory layout, indoor and outdoor laboratories, testing facility requirements, safety precautions in H.V. Labs.
Text Books:

Course Objectives:

- To develop a mathematical model of sample and hold circuit
- To study Z, inverse Z transforms and solution methodology of discrete time systems.
- To analyze the stability of discrete time system
- To study the state space analysis of discrete time systems
- To analyze the design of discrete PID controller, discrete observer and discrete compensator

Unit - I: Discrete Representation of Continuous Systems

Unit - II: Discrete System Analysis

Unit - III: Stability of Discrete Time System

Unit - IV: State Space Approach for discrete time systems

Unit - V: Design of Digital Control System

Text Books :

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to
1. Obtain knowledge on discrete representation of continuous systems.
2. Understand the usage of Z and inverse Z transform in discrete-time systems.
3. Gain knowledge about stability of discrete time systems.
4. Acquire knowledge about state space approach for discrete time systems.
5. Design discrete controllers and discrete compensators.

**Course Objectives:**

- To provide sound knowledge at the fundamental of electronic circuits
- To analyze the BJT circuits and its characteristics
- Introduction to MOSFET and small signal models
- To study multi-stage and operational amplifier
- To study the application Linear and non linear applications of op-amp circuits.

**Unit - I: Diode circuits**

P-N junction diode, I-V characteristics of a diode; review of half-wave and full-wave rectifiers, Zener diodes, clamping and clipping circuits.

**Unit - II: BJT circuits**

Structure and I-V characteristics of a BJT; BJT as a switch. BJT as an amplifier: small-signal model, biasing circuits, current mirror; common-emitter, common-base and common-collector amplifiers; Small signal equivalent circuits, high-frequency equivalent circuits

**Unit - III: MOSFET circuits**

MOSFET structure and I-V characteristics. MOSFET as a switch. MOSFET as an amplifier: small-signal model and biasing circuits, common-source, common-gate and common-drain amplifiers; small signal equivalent circuits - gain, input and output impedances, trans-conductance, high frequency equivalent circuit.

**Unit - IV: Differential, multi-stage and operational amplifiers**

Differential amplifier; power amplifier; direct coupled multi-stage amplifier; internal structure of an operational amplifier, ideal op-amp, non-idealities in an op-amp (Output offset voltage, input bias current, input offset current, slew rate, gain bandwidth product)

**Unit - V: Linear applications of op-amp**

Text/References:

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the characteristics of transistors.
2. Design and analyses various rectifier and amplifier circuits.
3. Design sinusoidal and non-sinusoidal oscillators.
4. Understand the functioning of OP-AMP and design OP-AMP based circuits.
5. Understand the structure and I.V characteristics of MOSFET & BJT.

Course Objectives:

- To review the fundamental concepts relating to Number systems, codes and Boolean algebra and to explain the working and the characteristics of Logic families and Logic packages.
- To bring out the function of logic gates, implementation of Boolean function using logic gates, simplification of Boolean Expression using K-map and implementation of various combinational circuits.
- To illustrate the function of various types of flip-flops and counters with the help of circuit diagram, truth table, state equation and timing diagram.
- To study about operation of A/D and D/A converters.
- To study the classification of semiconductor memories and programmable logic devices.

Unit - I: Fundamentals of Digital Systems and logic families

Digital signals, digital circuits, AND, OR, NOT, NAND, NOR and Exclusive-OR operations, Boolean algebra, examples of IC gates, number systems-binary, signed binary, octal hexadecimal number, binary arithmetic, one’s and two’s complements arithmetic, codes, error detecting and correcting codes, characteristics of digital ICs, digital logic families, TTL, Schottky TTL and CMOS logic, interfacing CMOS and TTL, Tri-state logic.

Unit - II: Combinational Digital Circuits

Standard representation for logic functions, K-map representation, simplification of logic functions using K-map, minimization of logical functions. Don’t care conditions, Multiplexer, De-Multiplexer/Decoders, Adders, Subtractors, BCD arithmetic, carry look ahead adder, serial adder, ALU, elementary ALU design, popular MSI chips, digital comparator, parity checker/generator, code converters, priority encoders, decoders/drivers for display devices, Q-M method of function realization.

Unit - III: Sequential circuits and systems

A 1-bit memory, the circuit properties of astable latch, the clocked SR flip flop, J- K-T and D-types flip flops, applications of flip flops, shift registers, applications of shift registers, serial to parallel converter, parallel to serial converter, ring counter, sequence generator, ripple(Asynchronous) counters, synchronous counters, counters design using flip flops, special counter IC’s, asynchronous sequential counters, applications of counters.
Unit - IV: A/D and D/A Converters

Digital to analog converters: weighted resistor/converter, R-2R Ladder D/A converter, specifications for D/A converters, examples of D/A converter ICs, sample and hold circuit, analog to digital converters: quantization and encoding, parallel comparator A/D converter, successive approximation A/D converter, counting A/D converter, dual slope A/D converter, A/D converter using voltage to frequency and voltage to time conversion, specifications of A/D converters, example of A/D converter ICs

Unit - V: Semiconductor memories and Programmable logic devices.

Memory organization and operation, expanding memory size, classification and characteristics of memories, sequential memory, read only memory (ROM), read and write memory (RAM), content addressable memory (CAM), charge de coupled device memory (CCD), commonly used memory chips, ROM as a PLD, Programmable logic array, Programmable array logic, complex Programmable logic devices (CPLDS), Field Programmable Gate Array (FPGA).

Course Outcomes:

At the end of this course, students will demonstrate the ability to
1. Understand the working of logic families and logic gates.
2. Design and implement Combinational logic circuits.
3. Understand the process of Analog to Digital conversion and Digital to Analog conversion.
4. Apply PLDs to implement the given logical problem.
5. Design and implement sequential logic circuits.

Mapping with Program Outcomes
Course Objectives:

- To develop a mathematical model for physical systems – translational and rotational system block diagram reduction techniques for obtaining transfer function.
- To study time response analysis of various standard inputs for first order and second order systems.
- To study frequency response analysis and frequency domain specification by bode plot and polar plot.
- To analyze stability of system and application of controllers
- To study the concept of controllability and observability and state space analysis. (Obtaining state equation for physical, phase and canonical variable)

Unit - I: Introduction to control problem

Industrial Control examples. Mathematical models of physical systems. Control hardware and their models. Transfer function models of linear time-invariant systems.

Unit - II: Time Response Analysis

Unit - III: Frequency-response analysis

Unit - IV: Introduction to Controller Design

Unit - V: State variable Analysis

Text/References:

5. Ambikapathy, ”control systems “, khanna book publishing co.(p) ltd, Delhi.

Course Outcomes:

At the end of this course, students will demonstrate the ability to

1. Understand the modeling of linear-time-invariant systems using transfer function and state-space representations.
2. Understand the concept of stability and its assessment for linear-time invariant systems.
3. Design simple feedback controllers.
4. Design simple feedback controllers.
5. Acquire knowledge about state variable analysis.

Course Objectives:

- To impart a wide knowledge about the components of LT system wiring components and their selection.
- To provide basic concepts regarding residential and commercial wiring systems and guide lines for their installation.
- To learn about various industrial electrical system and their production schemes.
- To familiarize the student with different automation schemes of Industrial Electrical systems.
- To understand different types of illumination systems and methods involved in design.

Unit - I: Electrical System Components

LT system wiring components, selection of cables, wires, switches, distribution box, metering system, Tariff structure, protection components- Fuse, MCB, MCCB, ELCB, inverse current characteristics, symbols, single line diagram (SLD) of a wiring system, Contactor, Isolator, Relays, MPCB, Electric shock and Electrical safety practices.

Unit - II: Residential and Commercial Electrical Systems

Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, Earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components.

Unit - III: Industrial Electrical Systems

HT connection, industrial substation, Transformer selection, Industrial loads, motors, starting of motors, SLD, Cable and Switchgear selection, Lightning Protection, Earthing design, Power factor correction – kVAR calculations, type of compensation, Introduction to PCC, MCC panels. Specifications of LT Breakers, MCB and other LT panel components.

Unit - IV: Industrial Electrical System and Automation

DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Sizing the DG, UPS and Battery Banks, Selection of UPS and Battery Banks. Study of basic PLC, Role of in automation, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation.
Unit - V: Illumination Systems

Understanding various terms regarding light, lumen, intensity, candle power, lamp efficiency, specific consumption, glare, space to height ratio, waste light factor, depreciation factor, various illumination schemes, Incandescent lamps and modern luminaries like CFL, LED and their operation, energy saving in illumination systems, design of a lighting scheme for a residential and commercial premises, floodlighting.

2. Web site for IS Standards.

Course Outcomes:

At the end of this course, students will able to
1. Familiarize with different electrical wiring systems for residential, commercial and industrial consumers, representing the systems with standard symbols and drawings, SLD.
2. Understand various components of industrial electrical systems.
3. Analyze and select the proper size of various electrical system components.
4. Acquire knowledge about various industrial automation system.
5. Train and get exposed with the design of illumination system.
