ANNAMALAI UNIVERSITY

Faculty of Engineering and Technology

DEPARTMENT OF MECHANICAL ENGINEERING

M.E. Energy Engineering and Management
Choice Based Credit System
(Full Time & Part Time)

2019
DEPARTMENT OF MECHANICAL ENGINEERING

VISION

The Mechanical Engineering Department endeavors to be recognized globally for outstanding education and research leading to well qualified engineers, who are innovative, entrepreneurial and successful in advanced fields of mechanical engineering to cater the ever changing industrial demands and social needs.

MISSION

The Mechanical Engineering program makes available a high quality, relevant engineering education. The Program dedicates itself to providing students with a set of skills, knowledge and attitudes that will permit its graduates to succeed and thrive as engineers and leaders. The Program strives to

- Prepare its graduates to pursue life-long learning, serve the profession and meet intellectual, ethical and career challenges.
- Maintain a vital, state-of-the-art research enterprise to provide its students and faculty with opportunities to create, interpret, apply and disseminate knowledge.

Programme Educational Objectives (PEO)

This program imbibes excellent technical capabilities in the area of energy engineering and allied systems, effective communication skill in students, ensuring successful career and continuing their professional advancement through life-long learning. The programme educational objectives of Master in Energy Engineering and Management are

1. Have high level of technical competency combined with research and problem solving ability to generate innovative solutions in energy engineering or related areas using the acquired analytical, computational and experimental skills.

2. Graduates will have inculcated the ability to maintain high professionalism and ethical standards, effective technical presentation and writing skill and to work as a part of team on research projects.

3. To prepare the students to exhibit a high level of professionalism, integrity, environmental and social responsibility, and life-long independent learning ability
Programme Outcomes (PO)

PO1: An ability to acquire, apply and share in-depth knowledge in the area of Energy Engineering and Management

PO2: An ability to analyze real life problems in the field of Energy Engineering and arrive at sustainable solutions

PO3: An ability to conduct independent research and generate knowledge for the benefit of mankind.

PO4: An ability to effectively communicate through technical reports, presentations and scientific publications in general and, use the modern computer/software tools to model and analyze energy engineering problems in particular.

PO5: An ability to work effectively in interdisciplinary teams to develop energy efficient systems for the society

PO6: An ability to apply engineering and scientific principles for effective management of energy systems

PO7: Graduates will demonstrate an ability to visualize and work on laboratory and multidisciplinary tasks.

PO8: An ability to engage in life-long independent learning with high level of enthusiasm and commitment

PO9: An ability to examine critically the outcomes of one’s actions and make corrective measures subsequently

Program Electives

1. MEEMPESCN Measurements and Controls in Thermal Engineering
2. MEEMPESCN Energy Conversion Techniques
3. MEEMPESCN Solar Energy and Wind Energy
4. MEEMPESCN Bio Energy Conversion Technologies
5. MEEMPESCN Boiler Technology
6. MEEMPESCN Fluidized Bed Systems
7. MEEMPESCN Design of Heat Exchangers
8. MEEMPESCN Computational Heat Transfer
9. MEEMPESCN Energy Storage Technologies
10. MEEMPESCN Renewable Energy Systems
11. MEEMPESCN Biomass Energy- Conversion and Conservation Techniques
12. MEEMPESCN Biomass Gasification - Technology and Utilization
13. MEEMPESCN Energy Auditing
14. MEEMPESCN Waste management and Energy generation techniques

Open Electives

1. MEEMOESCN Nuclear Engineering
2. MEEMOESCN Fuels and Combustion
3. MEEMOESCN Numerical Analysis in Engineering
4. MEEMOESCN Energy Management in Buildings
5. MEEMOESCN Advanced Power Plant Engineering

Audit courses

1. MEEMACSCN English for Research Paper Writing
2. MEEMACSCN Disaster Management
3. MEEMACSCN Sanskrit for Technical Knowledge
4. MEEMACSCN Value Education
5. MEEMACSCN Constitution of India
6. MEEMACSCN Pedagogy Studies
7. MEEMACSCN Stress Management by Yoga
8. MEEMACSCN Personality Development through Life Enlightenment Skills
COURSE OBJECTIVES

- To provide knowledge of energy, basic laws governing energy conversion
- To introduce advanced concepts in thermodynamics.
- To prepare the students to present theoretical, semi-theoretical and empirical models for the prediction of thermodynamic properties.

First law and State postulates, Second law and Entropy, Availability and Irreversibility, Transient flow analysis

Nonreactive Ideal-Gas Mixture, PVT Behavior of Real gases and Real Gas mixture Generalized Thermodynamic Relationship

Combustion and Thermo-chemistry, Second law analysis of reacting mixture, Availability analysis of reacting mixture, Chemical equilibrium.

Statistical thermodynamics, statistical interpretations of first and second law and Entropy.

Third law of thermodynamics, Nerst heat theorem.

REFERENCES:

COURSE OUTCOMES:

At the end of the course, student will be able to:

1. Gain knowledge of exergy, basic laws governing energy conversion in multi component systems and application of chemical thermodynamics.
2. Aware of advanced concepts in thermodynamics.
3. Able to present theoretical, semi-theoretical and empirical models for the prediction of thermodynamic properties.
4. Apply fundamental principles of thermodynamics to non-ideal models of numerous engineering devices
5. Understand statistical thermodynamics.

### COURSE OBJECTIVES

- To develop the skills to correlate the Physics with applications.
- To understand the laws of fluid flow and Heat transfer.
- To learn the advanced topics in heat transfer

**Basic Equation, Potential Flow Theory and Boundary Layer Concept:**

**Incompressible and Compressible Flows:**

**Conduction and Radiation Heat Transfer:**

Governing Equation and Boundary conditions, Extended surface Heat Transfer, Transient conduction – Use of Heisler’s charts, Conduction with moving boundaries, Radiation Heat Transfer, Gas Radiation

**Turbulent Forced Convective Heat Transfer:**

**Phase Change Heat Transfer and Heat Exchanger:**

Condensation on bank of tubes – boiling – pool and flow boiling, Heat exchanger – C – NTU approach and design procedure – compact heat exchangers

### REFERENCES

COURSE OUTCOMES
Upon completion of the course, students will be able to

1. Solve fluid flow problems
2. Understand compressible and incompressible flows
3. Solve transient heat transfer problems
4. Know the concept of turbulent heat transfer
5. Employ the concepts of Heat Transfer and fluid flow in the field of energy applications.

COURSE OBJECTIVES:
- To formulate research problems
- To analyze the information related to results
- To introduce research ethics

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

REFERENCES:
2. Wayne Goddard and Stuart Melville, “Research Methodology: An Introduction”

COURSE OUTCOMES:
At the end of this course, students will be able to
1. Understand research problem formulation.
2. Analyze research related information
3. Follow research ethics
4. Enhance their writing skills
5. Understand that today’s world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.

COURSE OBJECTIVES
- To conduct the load test, speed test and Heat Balance Test of a single and double cylinder diesel engine.
- To evaluate the performance of steam boiler, turbine and condenser.
- To make the students understand the working principle of various types of governors, balancing systems, Cam analyzer, Torsional vibration of single rotor system, whirling speed concept, action of forces in gyroscope.

List of Experiments
1. Study and Performance test on Kaeser air compressor test rig.
2. Heat balance test and air fuel determination on a Diesel Engine.
4. Determination of damping coefficient in damping torsional oscillation.
5. Experimentation of pressure processes station by PID control.
6. Demonstrate the gyroscopic effects and determination of gyroscopic couple.
7. Performance evaluation of loco type boiler.

COURSE OUTCOMES
Upon completing this course, students should be able to:
1. Gain knowledge about the combustion principles.
2. Analyze the performance of internal combustion engines.
3. Analyze the performance of steam boiler, turbine and condenser.
4. Supplement the principles learnt in kinematics and Dynamics of Machinery.
5. Work as a team to promote lifelong learning.

MEEMCP17  COMPUTER LABORATORY - II  L  T  P  C  0  0  3  2

COURSE OBJECTIVES
- To understand the strength of OOPS using c++
- To impart programming skills in C++ programming.
- To introduce the basics of MAT LAB.

List of Experiment
Search, generate, manipulate data using MS office/ Open Office
Presentation and Visualization – graphs, charts, 2D, 3D
C++, Programming,
Simple MATLAB Exercises
Simple CATIA Exercises

COURSE OUTCOMES
Upon completing this course, students should be able to:
1. Able to prepare slides and graphs
2. Write and compile programmes in C++
3. Develop assembly drawings with different views using auto cad
4. Solve simple mathematical models using MATLAB.
5. Write simple exercises in CATIA

SECOND SEMESTER

ME EM PC21 ENERGY CONSERVATION AND MANAGEMENT  

L  T  P  C
3  0  0  3

COURSE OBJECTIVES
- Familiarizing with management, especially with management in energy sector engineering.
- Fundamentals of product strategy management. Studying methods of energy accounting and energy auditing in energy sector, industry and final consumption.
- Finding opportunities to increase the rational use of energy.

Introduction:

Energy Conservation:

Role of Instrumentation in Energy Conservation:

Electrical Energy Auditing:

Energy Management:

REFERENCES
COURSE OUTCOMES:
Upon completion of this course, the students will be able to
1. Perform energy auditing for the energy consumption in industries.
2. Know the different types of lightings
3. Understand the energy conservation measures
4. Understand the significance of energy conservation in major utilities
5. Learn the concept of energy economics

MEEMPC22 CO-GENERATION AND WASTE HEAT RECOVERY SYSTEMS

COURSE OBJECTIVES
- To gain fundamental knowledge in energy generation, heat transfer in thermal engineering.
- To reduce the impact of global warming for betterment of living things to serve healthy life.
- To learn the principles of waste heat recovery

Cogeneration

Application & Techno Economics of Cogeneration

Waste Heat Recovery
  Introduction - Principles of Thermodynamics and Second Law - Sources of Waste Heat Recovery - Diesel Engines and Power Plant etc.

Waste Heat Recovery Systems, Applications & Techno Economics

Environmental Considerations
  Environmental considerations for Cogeneration and Waste Heat Recovery - Pollution
REFERENCES

COURSE OUTCOMES
Upon completion of the course, students will be able to
1. Acquire fundamental knowledge in co-generation.
2. Understand the applications and economics of co-generation
3. Learn the principles of waste heat recovery.
4. Learn the devices available for waste heat recovery
5. Solve real world problems and reduce the impact global warming for betterment of living things to serve healthy life.

COURSE OBJECTIVES
- To make the students understand the modes of heat transfer and to conduct the trails on various experiments to analyze the heat transfer parameters.
- To understand the working of refrigeration trainer and air conditioners.
- To study the basics of solar energy.

List of Experiments
1. Natural convection from vertical cylinder
2. Experiments on finned tube heat exchanger
3. Experiments on unsteady state heat transfer apparatus.
4. Determination of thermal conductivity of metal rod.
5. Experiments on composite wall apparatus
6. Performance test on central A/C plant
7. Performance test on vapor absorption refrigeration system
8. Performance test on Solar still
COURSE OUTCOMES
Upon completing this course, students should be able to:
1. Understand the behavior of a system at different operating conditions
2. Understand the various modes of heat transfer
3. Understand the working of refrigeration systems
4. Understand the usage of different refrigeration tools.
5. Learn the basics of solar energy, how to determine solar intensity, and how to estimate daily and annual solar energy potential at each location.

MEEMTS27 INDUSTRIAL TRAINING AND SEMINAR / MINI PROJECT

COURSE OBJECTIVES:
• To train the students in the field work related the Mechanical Engineering and to have a practical knowledge in carrying out Structural field related works.
• To train and develop skills in solving problems during execution of certain works related to Mechanical Engineering.

The students individually undergo a training program in reputed concerns in the field of Mechanical Engineering during the summer vacation (at the end of second semester for full-time / * fourth semester for part-time) for a minimum stipulated period of four weeks. At the end of the training, the student has to submit a detailed report on the training he had. Within ten days from the commencement of the third semester for Full-time / fifth semester for part-time. The students will be evaluated by a team of staff members nominated by head of the department through a viva-voce examination.

* - Four weeks during the summer vacation at the end of II Semester.

COURSE OUTCOMES:
1. The students can face the challenges in the practice with confidence.
2. The student will be benefited by the training with managing the situation arises during the execution of works related to Mechanical Engineering.
COURSE OBJECTIVES

- To enhance the research and development activities of the students
- To enhance the writing skills

COURSE OUTCOMES

Upon completing this course, students should be able to:

1. Understand the significance of research
2. Gain hands on experience in collection of literature
3. Improve their presentation skills
4. Enhance their thesis writing skills
5. Apply the knowledge gained from theoretical and practical courses in solving problems, so as to give confidence to be creative, well planned, organized, coordinated in their project work phase – II.

COURSE OBJECTIVES

- To equip the students with necessary foundation for effectively analyzing and solving the problems associated in thermal engineering field.
- To deliver comprehensive education in thermal Engineering to ensure that the students have core competency to be successful in industry/ research laboratory and motivate them to pursue higher studies and research in interrelated areas.
- To encourage the students to take up real life and/or research related problems and to create innovative solutions of these problems through comprehensive analysis and designing.

Measurement Characteristics

- Measuring instruments-static and dynamic characteristics - experimental error analysis-

Concepts of Instrumentation

- Basic instruments for the measurement of temperature- torque-strain gauges- pressure-
- velocity-current-flow and level.

Measurements of Surface Temperature

- Measurements of conductivity remote sensing of temperature- coefficient of conduction-
- insulating materials –convection and radiation - measurements of conduction in porus insulating material- measurement of pH value- Oxygen Concentration.

Gas Analysis

- Measurements of Co₂, No₂, Co and hydrocarbons and So₂, Use of gas Chromatography -
- fuel analysis- Measurements of Smoke- Dust and Moisture.

Microprocessor Based Instrumentation and Data Logging System

- Controllers and displays in power plants- pneumatic and electronic controls- typical control system in power plant control- loop interaction- nuclear reactor control systems.

REFERENCES

COURSE OUTCOMES

Upon completing this course, students should be able to:

1. Ability to acquire, apply and share in-depth knowledge in the area of thermal engineering.
2. Understand the significance of instrumentation.
3. Graduates will demonstrate skills to use modern engineering tools, software and equipment to analyze and solve complex engineering problems.
4. Graduate will acquire knowledge about current issues/advances in engineering practices.
5. Learn microprocessor based instrumentation systems

**COURSE OBJECTIVES**

- To analyze the pros and cons of conventional energy and direct energy conversion techniques for converting one form of energy to another.
- To study the various forms of energy conversion techniques and production of electrical energy.
- To understand the necessity of energy storage systems and the thermodynamic and kinetic principles of fuel cells.

**Introduction**

**Production of Thermal Energy and Mechanical Energy**

Conversion of mechanical, electrical, electromagnetic and chemical energy-conversion of thermal energy – turbines – Electromechanical conversion.

**Production of Electrical Energy**

Conversion of Thermal energy into electricity - Chemical energy into Electricity – Electromagnetic energy into Electricity – Mechanical energy into Electricity.

**Energy Storage Systems**

**Thermal Biomass Conversion**

Combustion, pyrolysis, Gasification and Liquefaction-Biological Conversion-Methanol, Ethanol Production -Fermentation-Anaerobic Digestion Biodegradation and Biodegradability of Substrate.

COURSE OUTCOMES
1. Learn the principles of energy conversion
2. Learn energy storage systems
3. Awareness on the existence of various mechanisms for conversion of energy from one form to another and their merits and constraints.
4. Understand the production of electrical energy from different conversion methods.
5. Understand the working of various fuel cells, their relative advantages/disadvantages.

COURSE OUTCOMES
Upon completion of the course, the students will be able to
1. Know about the exploration of nonconventional energy resources and their effective tapping technologies.
2. Model solar thermal system
3. Determine the characteristics of solar thermal system
4. Understand wind turbine aerodynamics
5. Demonstrate the working of wind energy conversion system

Mapping of COs with POs

✓
COURSE OBJECTIVES

- To pursue the various technologies for utilizing the bio-energy and its availability and conversion of bio-energy in the useful forms.
- Analyze elaborately the technologies available for conversion of biomass to energy in the technical update.
- Analyze the bio-energy conversion with respect to economical aspect and also in the environmental aspect.

Introduction of Biomass

Availability merits and demerits-Indian scenario-conversion mechanism- utilization of photo synthesis comparison with other energy.

Thermal Biomass Conversion

Combustion, pyrolysis, Gasification and Liquefaction-Biological Conversion-Methanol, Ethanol Production -Fermentation-Anaerobic Digestion Biodegradation and Biodegradability of Substrate.

Combustion

Perfect, complete and incomplete combustion-stoichiometric air requirement for biofuels-equivalence ratio-fixed bed and fluid Bed combustion-fuel and ash handling systems-steam cost comparison with conventional fuels.

Power Generation Techniques

Economics and Environmental Aspects

REFERENCES

COURSE OUTCOMES
Upon completion of the course, the students will be able to
1. Gain vast idea of the various form of biomass availability in the earth.
2. Get complete understanding of the various biomass energy conversion technologies,
3. Understand the importance of bio mass
4. Learn the chemistry behind the combustion process.
5. Learn the economical and environmental aspects of biomass energy conversion.

COURSE OBJECTIVES
The course content should be taught with the aim to develop different types of skills so that students are able to acquire following competency:
- To apply basic concepts, laws and principles of Boiler design.
- To impart greater understanding of heat balance in Boiler for modern power plant.
- To throw light on the heat transfer aspects involved in boiler technology.
- To enlighten the students on the various techniques involved in the boiler code.

Introduction

Boiler Design
Design of Boiler Drum - Steam Generator Configurations for Industrial Power and Recovery Boilers - Pressure Loss and Circulation in Boilers

Design of Accessories
Design of Air Preheaters - Economisers and Superheater for High Pressure Steam Generators - Design Features of Fuel Firing Systems and Ash Removing Systems

Emmission Aspects
Boiler code

REFERENCES

COURSE OUTCOMES
At the end of this course, the students will be able to
1. Gain the ability of engineering design calculations in boiler technology.
2. Attain knowledge of modern technology in boiler accessories design and heat balance calculation.
3. Understand the possible emissions from a boiler.
4. Understand cooling water treatment method.
5. Become excellent managers of the boiler code.

Mapping of COs with POs
COURSE OBJECTIVES
- To expose the student to perform the energy transfer analysis on the all types of heat exchangers.
- To impart the knowledge about phase changes-Special application to Condensers and Evaporators.
- To understand and solve the real life industrial problems for heat exchanger design and optimization.

Constructional Details and Heat Transfer
- Types - Shell and Tube Heat Exchangers - Regenerators and Recuperators - Industrial Applications Temperature Distribution and its Implications - LMTD - Effectiveness

Flow Distribution and Stress Analysis
- Effect of Turbulence - Friction Factor - Pressure Loss - Channel Divergence Stresses in Tubes - Heater Sheets and Pressure Vessels - Thermal Stresses - Shear Stresses - Types of Failures

Design Aspects

Condensors and Evaporators Design
- Design of Surface and Evaporative Condensors - Design of Shell and Tube - Plate Type Evaporators

Cooling Towers
- Packings - Spray Design - Selection of Pumps - Fans and Pipes - Testing and Maintenance - Experimental Methods

REFERENCES
7. http://www.tata.com

COURSE OUTCOMES
Upon completion of the course, the students will be able to
1. Perform energy transfer analysis in heat exchangers.
2. Learn the types of failures in heat exchangers
3. Able to design condensers and cooling towers
4. The student with engineering equation solver and its use in heat exchanger design.
5. The student to do energy transfer analysis for research and develop energy effective systems.

**Course Objectives:**

- To impart fundamental mathematical concepts related to computational heat transfer.
- To impart fundamental mathematical concepts about fluid flow and heat transfer.
- To train students in the usage of computational codes and develop new ones.

**Mathematical Description of Physical Phenomena**

**Finite Difference Methods in Partial Differential Equations**

**Applications in Heat Condition and Convection**

- Control Volume Approach - Steady and Unsteady One Dimensional Conduction - Two and Three Dimensional Situations - Solution Methodology. Convection and Diffusion: Upwind Scheme - Exponential Scheme. Hybrid Scheme - Power Law Scheme: Calculation of the Flow Field - Simpler Algorithm.

**Finite Element Method Concept**

- General Applicability of the Method using one dimensional heat transfer equation - Approximate Analytical Solution - Raleigh’s Method. Galerkin Method, Solution Methods

**Finite Element Method Packages**

- General Procedure - Discretisation of the domain - Interpolation Polynomials - Formulation of Element Characteristic Matrices and Vectors - Direct, Variational and Weighted

MEEMSCN | ENERGY STORAGE TECHNOLOGIES | L | T | P | C
---------|-----------------------------|---|---|---|---
3        | 0                           | 0 | 3 | 3

COURSE OBJECTIVES
- Student will be able to demonstrate and apply in depth technical knowledge of engineering in design and operation of various thermal systems.
- Develop the students to enrich their wise through their cognitive skill.
- Student will be able to understand the need for, and an ability to engage in life-long learning and continual updating of professional skills.

Energy Storage Need of energy storage
Electrochemical Energy Storage Systems Batteries

Primary, Secondary, Lithium, Solid-state and molten solvent batteries; Lead Lead acid batteries; Nickel Cadmium Batteries; Advanced Batteries. Role of carbon nano-tubes in electrodes.

Magnetic and Electric Energy Storage Systems

Superconducting Magnet Energy Storage(SMES) systems; Capacitor and Batteries: Comparison and application; Super capacitor: Electrochemical Double Layer Capacitor (EDLC), principle of working, structure, performance and application, role of activated carbon and carbon nano-tube.

Sensible Heat Storage

SHS mediums; Stratified storage systems; Rock-bed storage systems; Thermal storage in buildings; Earth storage; Energy storage in aquifers; Heat storage in SHS systems; Aquifers storage. Solar Ponds for energy storage. Green house heating.

Latent Heat Thermal Energy Storage

Phase Change Materials (PCMs); Selection criteria of PCMs; Stefan problem; Solar thermal LHTES systems; Energy conservation through LHTES systems; LHTES systems in central air-conditioning systems; Energy Storage Food preservation; Waste heat recovery; Solar energy storage;

COURSE OUTCOMES

Upon completion of the course, the students will be able to

1. Understand the principles and technologies for thermal storage system, application and utilization.
2. Identify, formulate and solve simple to complex troubles of thermal storage systems, conversion and storage.
3. Identify and understand principle components and their function.
4. Know the significance of phase change materials
5. Understand the industrial implications of energy storage

COURSE OBJECTIVES

- To acquire knowledge of technical competency combined with research to generate innovative solutions in Energy engineering.
- To be acquainted with a variety of options in energy sources.
- To prepare the students to exhibit a high level of professionalism, integrity, environmental and social responsibility, and life-long independent learning ability.

Introduction

World energy use-reserves of energy resources-energy cycle of the earth-environmental aspects of energy utilisation-renewable energy resources and their importance.

Solar Energy

Introduction - extraterrestrial solar radiation - radiation at ground level - collectors - solar cells - applications of solar energy - Biomass Energy - Introduction - Biomass Conversion - Biogas Production - Ethanol Production - Pyrolysis and Gasification - Direct Combustion -

Applications

Tidal Energy

Introduction - origin of tides - power generation schemes - Wave Energy - Introduction - basic theory - wave power devices.

Other Renewable Energy Sources: Introduction - Open and Closed OTEC cycles - biophotolysis - Ocean Currents - Salinity Gradient Devices - Environmental Aspects - Potential impacts of harnessing the different renewable energy resources.

COURSE OUTCOMES
Upon completion of the course, the students will be able to
1. Acquire, apply and share in depth knowledge in the area of Energy Engineering and Management.
2. Conduct independent research and generate knowledge for the benefit of mankind.
3. Apply engineering and scientific principles for the effective management of energy systems.
4. Gain environmental responsibility.
5. Understand the significance of renewable energy systems.

COURSE OBJECTIVES

- To learn the present biomass energy scenario and the importance of energy conversion.
- To learn the biomass, biomethanation, gasification, pyrolysis and carbonization.
- To analysis different routes of biomass conversion and methods of characterization.

Origin of Biomass

Biomass Production and Conversion

Biomethanation and Combustion

Gasification

Pyrolysis and Carbonization

REFERENCES

COURSE OUTCOMES

After successful completion of this course, the students should be able to
1. Understand the generation and utilization of various biomass resources.
2. Gain knowledge on proximate and ultimate analysis.
3. Understand the various biomass conversion - biometanation, gasification and pyrolysis.
4. Learn the environmental impact of bio mass conversion
5. Know the potential of biomass resources

Mapping of COs with POs
COURSE OBJECTIVES

- To learn about the different types biomass technology.
- To study the origin and developments of gasification system.
- To learn the various types of gasifier, purification, cooling system and impact on environment.
- To learn the properties of gaseous fuel from woody biomass and application as engine fuel.

Introduction

Biomass Technology

Gasifiers, Gas Cleaning and Cooling

Impact of Fuel Properties on Gasification and Drive Engines

Gasification fuels-Need for selection of the right gasifier for each fuel-Energy content of the fuel- Moisture content of the fuel- Voltaile matter content of the fuel-ash content and ash chemical composition-Reactivity of the fuel-Particle size and distribution-Bulk density of the fuel-Charring properties of the fuel- Assessment of the suitability of various types of biomass as gasifier fuel.

Producer gas drive engines- Performance of gasifier- engine system- Operational difference between diesel and gasoline engine- Conversion of gasoline engine to produce gas-Conversion of diesel engine to producer gas- Conditions of producer gas- Engine power output using producer gas- Gas quality requirements for trouble free operation.

Technologies for Biomass Utilisation

Biomass utilisation strategy - Applications to be serviced - Biomass classification and - properties Gasification- Combustion vs Gasification - Woody biomass gasifier (thermal and electric)-Pulverised fuel gasifier (thermal and electric) - Engine operation - Technologies available- Production of fuel gas-production of mechanical or Electrical power in stationary installations.-Mobile applications.
REFERENCES

COURSE OUTCOMES
Upon completion of the course, students will be able to
1. Understand biomass gasification technology.
2. Learn different types of gasifier and purification systems.
3. Gain knowledge on different fuel properties
4. Understand the impact of fuels on gasification and engines.
5. Understand the technologies for biomass utilization

MEEMSCN | ENERGY AUDITING | L | T | P | C
---------|----------------|---|---|---|---
         |                | 3 | 0 | 0 | 3

COURSE OBJECTIVES:
- To familiarize various forms of energy
- To understand energy management concepts
- To learn the methods of energy audit and usage of instruments
- To analyze and report the outcome of energy audit

Fundamentals of Energy
Basics of energy and its various forms: Conventional and non-conventional sources. Different fuels and its energy contents. Renewable energy - solar energy, wind energy, bio energy, hydro energy, geothermal energy, wave energy, tidal energy and OTEC.

Energy Management
Energy management- various approaches, cost effectiveness, bench marking, optimization of energy requirement and maximization of system efficiencies. Fuels and energy substitution.
Energy Audit
Energy audit – need, preliminary audit, detailed audit, methodology and approach. Instruments for audit, monitoring energy and energy savings.

Assessment and Reporting
Evaluation of saving opportunities – determining the savings in INR, non-economic factors, conservation opportunities, estimating cost of implementation.

Energy Audit Reporting the plant energy study report, importance, effective organization, report writing and presentation.

REFERENCES
1. Energy Management Audit & Conservation by Barun Kumar De Publisher: Vrinda Publications 2007
5. Efficient Use of Energy: I.G.C.Dryden (Butterworth Scientific)

COURSE OUTCOMES
Upon completion of the course, students will be able to
1. Understand various energy management concepts
2. Learn the methods of energy audit and usage of instruments
3. Analyze and report the outcome of energy audit
4. Become a potential energy auditor
5. Promote lifelong learning

MEEMMSCN | WASTE MANAGEMENT AND ENERGY GENERATION TECHNIQUES | L | T | P | C
---------|----------------------------------------------------|---|---|---|---
         |                                                   | 3 | 0 | 0 | 3

COURSE OBJECTIVES
- To familiarize students with recent energy generation techniques
- To provide information on various methods of waste management
- To detail on the recent technologies of waste disposal and
- To make student realize on the importance of healthy environment
Solid Waste
Definitions - Sources, Types, Compositions, Properties of Solid Waste - Municipal Solid Waste - Physical, Chemical and Biological Property - Collection - Transfer Stations - Waste Minimization and Recycling of Municipal Waste

Waste Treatment
Size Reduction - Aerobic Composting - Incineration - Furnace Type & Design, Medical / Pharmaceutical waste Incineration - Environmental Impacts - Measures to Mitigate Environmental effects due to Incineration.

Waste Disposal
Land Fill Method of Solid Waste Disposal - Land Fill Classification, Types, Methods & Siting Consideration - Layout & Preliminary Design of Land Fills - Composition, Characteristics, generation, Movement and Control of Landfill Leachate & Gases- Environmental Monitoring System for Land Fill Gases

Hazardous Waste Management

Anaerobic Digestion
Biogas Production - Types of Biogas Plant Thermochemical Conversion - Sources of Energy Generation - Gasification - Types of Gasifiers - Briquetting - Industrial Applications of Gasifiers - Utilization and Advantages of Briquetting - Environmental Benefits of Biochemical and Thermochemical Conversion

REFERENCES
5. Bhide AD., Sundaresan BB, Solid Waste Management in Developing Countries, INSDOC New Delhi, 1983

COURSE OUTCOMES
Upon completion of the course, the students will be able to
1. Understand the waste characterization, segregation and disposal
2. Familiarize the technologies that are available for effective waste disposal
3. Understand the problem in a sensible and realistic manner
4. Learn the principles of hazardous waste treatment
5. Understand the environmental benefits of biochemical and thermochemical conversions

COURSE OBJECTIVES:
- To learn the basics of nuclear engineering
- To know the reactor kinetics
- To prepare the students to exhibit a high level of professionalism, integrity, environmental and social responsibility, and life-long independent learning ability

Basics of nuclear fission and power from fission
Radioactivity, nuclear reactions, cross sections, nuclear fission, power from fission, conversion and breeding

Neutron transport and diffusion
Neutron transport equation, diffusion theory approximation, Fick’s law, solutions to diffusion equation for point source, planar source, etc., energy loss in elastic collisions, neutron slowing down

Multigroup, multiregion diffusion equation, concept of criticality
Solution of multigroup diffusion equations in one region and multiregion reactors, concept of criticality of thermal reactors

Reactor kinetics and control
Derivation of point kinetics equations, inhour equation, solutions for simple cases of reactivity additions, fission product poison, reactivity coefficients

Heat removal from reactor core
Solution of heat transfer equation in reactor core, temperature distribution, critical heat flux

Reactor safety, radiation protection
Reactor safety philosophy, defence in depth, units of radioactivity exposure, radiation protection standards

REFERENCES:
2. Introduction to Nuclear Reactor Theory, by John R. Lamarsh, Addison-Wesley, 1966)
COURSE OUTCOMES:
At the end of the course, student will be able to
1. Understand the basic concepts and processes taking place inside a nuclear reactor
2. Understand the techniques of neutron production, scattering, diffusion, slowing down and absorption.
3. Familiar with concepts of reactor criticality, the relationship between the dimension and fissile material concentration in a critical geometry.
4. Familiar with time dependent (transient) behaviour of power reactor in non-steady state operation and the means to control the reactor.
5. Familiar with the concepts of heat removal from reactor core, reactor safety and radiation protection.

MEEMOESCNFUELS AND COMBUSTION

COURSE OBJECTIVES
- To learn different type of conventional and non conventional fuel with their properties, methods to analysis of fuel, Energy conversion techniques in detail.
- To learn the combustion process of conventional and non conventional fuels, able to calculate the necessary air requirement for combustion process.
- To acquire knowledge in the areas of ignition, Flame study and details of burners to develop combustion process.

Introduction

Solid & Liquid Fuels

Gaseous Fuels

Theory of Combustion Process and Stoichiometry
**Burner Design**

Ignition, Concept of Ignition, Auto Ignition, Ignition Temperature, Flame, Flame Propagation, Flame Front, Various Methods of Flame Stabilization, Concepts of Burner, Basic Features and Types of Solid, Liquid and Gaseous Fuel Burners - Different Types of Coal - Oil and Gas Burners, Recuperative & Regenerative Burners.

**REFERENCES**

5. Sharma SP, Mohan Chander, Fuels & Combustion, Tata Mcgraw Hill, 1984

**COURSE OUTCOMES**

Upon completion of the course, students will be able to

1. Evaluate the properties of conventional and non conventional fuel, and to describe, compare, cost and availability.
2. Learn the various advantages and disadvantages of each fuel.
3. Understand the complete combustion process of each fuel,
4. Able to calculate the stoichiometry, theoretical and actual air requirement for the combustion process.
5. Understand the concepts of ignition characteristics, Flame, Flame propagation and Flame front in detail.

</table>

**COURSE OBJECTIVES**

- To understand the significance of numerical analysis in solving engineering problems.
- To understand the basic concepts of mathematical modeling.
- To promote lifelong learning

**Functional Approximation**

Interpolation - divided difference, finite difference, Lagrangian, Chebychev, Hermite, Spline interpolations. Least squares methods - Orthogonal polynomial approximations, fourier approximations, fast fourier transforms. Types of errors - introduction to error analysis.

**Numerical Calculus**

**Eigen value problems**

Power and inverse power methods, Householder method, simultaneous iteration method, Lanczo's method.
Solution of Differential Equations

Initial Value problems - Euler's method, Runge-Kutta methods, Variable step methods.
Boundary value problems - shooting method.

Unconstrained Optimisation

Single variable minimization, multivariate minimization - direct search methods, gradient. Introduction to constrained optimisation.

REFERENCES

COURSE OUTCOMES

Upon completion of the course, the students will be able to
1. Understand the common numerical methods used in engineering analysis
2. Estimate the amount of error inherent in different numerical methods.
3. Solve differential equations
4. Assess the efficiency of a selected numerical method when more than one option is available to solve a certain class of problem.
5. Apply these principles for a lifelong learning

MEEMOESCN | ENERGY MANAGEMENT IN BUILDINGS | L | T | P | C
| 3 | 0 | 0 | 3 |

COURSE OBJECTIVES

- To learn the green buildings concepts applicable to modern buildings.
- Acquaint students with the principle theories materials, construction techniques and to create energy efficient buildings.
- To learn the methodology of heat transmission in buildings

Introduction

Conventional versus Energy Efficient buildings – Historical perspective - Water – Energy – IAQ requirement analysis – Future building design aspects – Criticality of resources and needs of modern living

Landscape and Building Envelopes

Energy efficient Landscape design - Micro-climates – various methods – Shading, water bodies-
Building envelope: Building materials, Envelope heat loss and heat gain and its evaluation, paints, Insulation, Design methods and tools.

Heat Transmission in Buildings

Surface co-efficient- air cavity, internal and external surfaces, overall thermal transmittance, wall and windows; Heat transfer due to ventilation/infiltration, internal heat transfer; Solar temperature; decrement factor; Phase lag. Design of daylighting; Estimation of building loads: Steady state
method, network method, numerical method, correlations; Computer packages for carrying out thermal design of buildings and predicting performance.

**Passive Cooling**
Passive cooling concepts- Evaporative cooling, radiative cooling; Application of wind, water and earth for cooling; Shading, paints and cavity walls for cooling; Roof radiation traps; Earth airtunnel. Hybrid methods.

**Renewable Energy in Buildings**

**REFERENCES**

**COURSE OUTCOMES**
Upon completion of the course, the student will be able to
1. Learn the critical resources required for a modern living
2. Perform energy audit in any type for buildings and suggest the conservation measures.
3. Implement passive cooling techniques in buildings
4. Provide the renewable energy systems for the buildings
5. Enhance their standard of living

**COURSE OBJECTIVES**
- To understand and analyze the present and future energy demand of world and nation and techniques
- To exploit the available renewable energy resources such as, solar, bio-fuels, wind power, tidal and geothermal effectively
- To learn advanced topics in power plant engineering

**Direct Energy Conversion**

**Power Plants**
Solar Energy

Other Non-Conventional Energy Systems

Tidal Power Plants

REFERENCES

COURSE OUTCOMES
Upon the completion of the course, the students will be able to
1. Acquire fundamental knowledge in energy generation, heat transfer and to utilization
2. Gain basic knowledge in renewable energy conversion technology
3. Learn the various cycles employed in power plants
4. Ability to use modern engineering tools, software and equipment to analyze and solve complex engineering problems.
5. Solve real world problems and reduce the impact global warming for betterment of living things to serve healthy life.

**COURSE OBJECTIVES**

Students will be able to:

- Understand that how to improve your writing skills and level of readability
- Learn about what to write in each section
- Understand the skills needed when writing a title
- Ensure the good quality of paper at very first-time submission

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature,

Key skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions

Useful phrases, how to ensure paper is as good as it could possibly be the first-time submission

**COURSE OBJECTIVES**

Students will be able to:

- Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in.

Introduction
Disaster: Definition, Factors And Significance; Difference Between Hazard And Disaster; Natural And Manmade Disasters: Difference, Nature, Types And Magnitude.

Disaster Prone Areas In India: Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics

Disaster Preparedness and Management: Preparedness: monitoring of phenomena triggering a disaster or hazard; evaluation of risk: application of remote sensing, data from meteorological and other agencies, media reports: governmental and community preparedness.

Disaster Mitigation: Meaning, Concept And Strategies Of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation And Non-Structural Mitigation, Programs Of Disaster Mitigation in India.

COURSE OBJECTIVES
- To get a working knowledge in illustrious Sanskrit, the scientific language in the world
- Learning of Sanskrit to improve brain functioning
- Learning of Sanskrit to develop the logic in mathematics, science & other subjects
- Enhancing the memory power
- The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature

REFERENCES
1. “Abhyaspustakam” – Dr. Vishwas, Samskrita-Bharti Publication, New Delhi
2. “Teach Yourself Sanskrit” Prathama Deeksha-Vempati Kutumbhashstri, Rashtriya Sanskrit Sansthanam, New Delhi Publication

COURSE OUTCOMES
Upon successful completion of the course, the students are able to:
1. Understanding basic Sanskrit language
2. Ancient Sanskrit literature about science & technology can be understood
3. Being a logical language will help to develop logic in students.

MEEMACSCN VALUE EDUCATION

COURSE OBJECTIVES
Students will be able to
• Understand value of education and self-development
• Imbibe good values in students
• Let the should know about the importance of character

REFERENCES

COURSE OUTCOMES
Upon successful completion of the course, the students are able to:
1. Knowledge of self-development
2. Learn the importance of Human values
3. Developing the overall personality.
COURSE OBJECTIVES
Students will be able to:

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals’ constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
- To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

History of Making of the Indian Constitution: History Drafting Committee, (Composition & Working)

Philosophy of the Indian Constitution: Preamble Salient Features

Organs of Governance: Parliament, Composition, Qualifications and Disqualifications Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions

REFERENCES
1. The Constitution of India, 1950 (Bare Act), Government Publication.

COURSE OUTCOMES
Upon successful completion of the course, the students are able to:

1. Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
2. Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
3. Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution.

**COURSE OBJECTIVES**

Students will be able to:

- Review existing evidence on the review topic to inform programme design and policy making undertaken by the DfID, other agencies and researchers.
- Identify critical evidence gaps to guide the development.

**Introduction and Methodology:** Aims and rationale, Policy background, Conceptual framework and terminology, Theories of learning, Curriculum, Teacher education. Conceptual framework, Research questions. Overview of methodology and Searching.

**Thematic overview:** Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries. Curriculum, Teacher education.

**Evidence on the effectiveness of pedagogical practices** Methodology for the in depth stage: quality assessment of included studies. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? Theory of change. Strength and nature of the body of evidence for effective pedagogical practices. Pedagogic theory and pedagogical approaches. Teachers’ attitudes and beliefs and Pedagogic strategies.

**Professional development:** alignment with classroom practices and follow-up support Peer support Support from the head teacher and the community. Curriculum and assessment Barriers to learning: limited resources and large class sizes

**Research gaps and future directions:** Research design, Contexts, Pedagogy, Teacher education, Curriculum and assessment, Dissemination and research impact.

**REFERENCES**

COURSE OUTCOMES
Upon successful completion of the course, the students are able to:
1. What pedagogical practices are being used by teachers in formal and informal classrooms in developing countries?
2. What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners?
3. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy?
