1. Conditions for Admission

Candidates for admission to the first year of the four-semester M.E./M.Tech. Degree programme in Engineering shall be required to have passed B.E./B.Tech. degree of Annamalai University or any other authority accepted by the syndicate of this University as equivalent thereto. They shall satisfy the conditions regarding qualifying marks and physical fitness as may be prescribed by the Syndicate of the Annamalai University from time to time. The admission for M.E Part Time programme is restricted to those working or residing within a radius of 90 km from Annamalainagar. The application should be sent through their employers.

2. Branches of Study in M.E / M.Tech

<table>
<thead>
<tr>
<th>Department</th>
<th>Programme (Full Time &amp; Part time)</th>
<th>Eligible B.E./B.Tech Programme</th>
</tr>
</thead>
</table>

3. Courses of Study

The courses of study along with the respective syllabi and the scheme of Examinations for each of the M.E./M.Tech. programmes offered by the different Departments of study in the Faculty of Engineering and Technology are given separately.

4. Choice Based Credit System (CBCS)

The curriculum includes three components namely Program Core, Program Electives and Open Electives, Mandatory Learning Courses and Audit Courses in addition to Thesis. Each semester curriculum shall normally have a blend of theory and practical courses.

5. Assignment of Credits for Courses

Each course is normally assigned one credit per hour of lecture / tutorial per week and 0.5 credit for one hour of laboratory or project or industrial training or seminar per week. The total credits for the programme will be 68.
6. Duration of the Programme

A student of M.E./M.Tech. programme is normally expected to complete in four semesters for full-time/six semesters for part-time but in any case not more than four years for full-time/six years for part-time from the date of admission.

7. Registration for Courses

A newly admitted student will automatically be registered for all the courses prescribed for the first semester, without any option. Every other student shall submit a completed registration form indicating the list of courses intended to be credited during the next semester. This registration will be done a week before the last working day of the current semester. Late registration with the approval of the Dean on the recommendation of the Head of the Department along with a late fee will be done up to the last working day. Registration for the Thesis Phase - I and Phase-II shall be done at the appropriate semesters.

8. Electives

8.1 Program Electives

The student has to select two electives in first semester, another two electives in the second semester and one more in the third semester from the list of Program Electives.

8.2 Open Electives

The student has to select two electives in third semester from the list of Open Electives offered by the Department and / or other departments in the Faculty of Engineering and Technology.

8.3 MOOC (SWAYAM) Courses

Further, the student can be permitted to earn credits by studying the Massive Open Online Courses offered through the SWAYAM Portal of UGC with the approval of the Head of the Department concerned. These courses will be considered as equivalent to open elective courses. Thus the credit earned through MOOC courses can be transferred and considered for awarding Degree to the student concerned.

8.4 Value added courses (Inter Faculty Electives)

Of the two open elective courses, a student must study one value added course that is offered by other Faculties in our University either in second or third semester of the M.E programme.

9. Industrial Project

A student may be allowed to take up the one program elective and two open elective courses of third semester (Full Time program) in the first and second semester, to enable him/her to carry out Project Phase-I and Phase-II in an industry during the entire second year of study. The condition is that the student must register those courses in the first semester itself. Such students should meet the teachers offering those elective courses themselves for clarifications. No specific slots will be allotted in the time table for such courses.
10. Assessment

10.1 Theory Courses

The break-up of continuous assessment and examination marks for theory courses is as follows:

- First assessment (Mid-Semester Test-I) : 10 marks
- Second assessment (Mid-Semester Test-II): 10 marks
- Third Assessment : 5 marks
- End Semester Examination : 75 marks

10.2 Practical Courses

The break-up of continuous assessment and examination marks for Practical courses is as follows:

- First assessment (Test-I) : 15 marks
- Second assessment (Test-II) : 15 marks
- Maintenance of record book : 10 marks
- End Semester Examination : 60 marks

10.3 Thesis work

The thesis Phase I will be assessed for 40 marks by a committee consisting of the Head of the Department, the guide and a minimum of two members nominated by the Head of the Department. The Head of the Department will be the chairman. The number of reviews must be a minimum of three per semester. 60 marks are allotted for the thesis work and viva voce examination at the end of the third semester. The same procedure will be adopted for thesis Phase II in the fourth semester.

10.4 Seminar / Industrial Training

The continuous assessment marks for the seminar / industrial training will be 40 and to be assessed by a seminar committee consisting of the Seminar Coordinator and a minimum of two members nominated by the Head of the Department. The continuous assessment marks will be awarded at the end of the seminar session. 60 marks are allotted for the seminar / industrial training and viva voce examination conducted based on the seminar / industrial training report at the end of the semester.

11. Student Counselors (Mentors)

To help the students in planning their course of study and for general advice on the academic programme, the Head of the Department will attach a certain number of students to a member of the faculty who shall function as student counselor (mentors) for those students throughout their period of study. Such student counselors shall advise the students in selecting open elective courses from, give preliminary approval for the courses to be taken by the students during each semester, and obtain the final approval of the Head of the Department monitor their progress in SWAYAM courses / open elective courses.
12. Class Committee

For each of the semesters of M.E / M.Tech programmes, separate class committees will be constituted by the respective Head of the Departments. The composition of the class committees from first to fourth semesters for Full time and first to sixth semesters for Part-time will be as follows:

- Teachers of the individual courses.
- A Thesis coordinator (for Thesis Phase I and II) shall be appointed by the Head of the Department from among the Thesis supervisors.
- A thesis review committee chairman shall be appointed by the Head of the Department.
- One Professor or Associate Professor, preferably not teaching the concerned class, appointed as Chairman by the Head of the Department.
- The Head of the Department may opt to be a member or the Chairman.
- All counselors of the class and the Head of the Department (if not already a member) or any staff member nominated by the Head of the Department may opt to be special invitees.

The class committee shall meet three times during the semester. The first meeting will be held within two weeks from the date of class commencement in which the type of assessment like test, assignment etc. for the third assessment and the dates of completion of the assessments will be decided.

The second meeting will be held within a week after the completion of the first assessment to review the performance and for follow-up action.

The third meeting will be held after all the assessments but before the University semester examinations are completed for all the courses, and at least one week before the commencement of the examinations. During this meeting the assessment on a maximum of 25 marks for theory courses / 40 marks for practical courses, for Industrial Training and for Thesis work (Phase-I and Phase-II) will be finalized for every student and tabulated and submitted to the Head of the Department for approval and transmission to the Controller of Examinations.

13. Temporary Break Of Study

A student can take a one-time temporary break of study covering the current semester and/or the next semester with the approval of the Dean on the recommendation of the Head of the Department, not later than seven days after the completion of the mid-semester test. However, the student must complete the entire programme within the maximum period of **four years for Full time/six years for Part time**.

14. Substitute Assessments

A student who has missed, for genuine reasons accepted by the Head of the Department, one or more of the assessments of a course other than the end of semester examination may take a substitute assessment for any one of the missed assessments. The substitute assessment must be completed before the date of the third meeting of the respective class committees.
A student who wishes to have a substitute assessment for a missed assessment must apply to the Head of the Department within a week from the date of the missed assessment.

15. Attendance Requirements

The students with 75% attendance and above are permitted to appear for the University examinations. However, the Vice Chancellor may give a rebate / concession not exceeding 10% in attendance for exceptional cases only on Medical Grounds.

A student who withdraws from or does not meet the minimum attendance requirement in a semester must re-register and repeat the same semester in the subsequent academic years.

16. Passing and declaration of Examination Results

All assessments of all the courses on an absolute marks basis will be considered and passed by the respective results passing boards in accordance with the rules of the University. Thereafter, the controller of examinations shall convert the marks for each course to the corresponding letter grade as follows, compute the grade point average (GPA) and cumulative grade point average (CGPA) and prepare the mark sheets.

<table>
<thead>
<tr>
<th>Marks</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>90 to 100</td>
<td>Grade ‘S’</td>
</tr>
<tr>
<td>80 to 89</td>
<td>Grade ‘A’</td>
</tr>
<tr>
<td>70 to 79</td>
<td>Grade ‘B’</td>
</tr>
<tr>
<td>60 to 69</td>
<td>Grade ‘C’</td>
</tr>
<tr>
<td>55 to 59</td>
<td>Grade ‘D’</td>
</tr>
<tr>
<td>50 to 54</td>
<td>Grade ‘E’</td>
</tr>
<tr>
<td>Less than 50</td>
<td>Grade ‘RA’</td>
</tr>
<tr>
<td>Withdrawn from the Examination</td>
<td>Grade ‘W’</td>
</tr>
</tbody>
</table>

A student who obtains less than 30 / 24 marks out of 75 / 60 in the theory / practical examinations respectively or is absent for the examination will be awarded grade RA.

A student who earns a grade of S, A, B, C, D or E for a course is declared to have successfully completed that course and earned the credits for that course. Such a course cannot be repeated by the student.

A student who obtains letter grade RA / W in the mark sheet must reappear for the examination of the courses.

The following grade points are associated with each letter grade for calculating the grade point average and cumulative grade point average.

- S - 10; A - 9; B - 8; C - 7; D - 6; E - 5; RA - 0

Courses with grade RA / W are not considered for calculation of grade point average or cumulative grade point average.
A student can apply for re-totaling of one or more of his examination answer papers within a week from the date of issue of mark sheet to the student on payment of the prescribed fee per paper. The application must be made to the Controller of Examinations with the recommendation of the Head of the Department.

After the results are declared, mark sheets will be issued to the students. The mark sheet will contain the list of courses registered during the semester, the grades scored and the grade point average for the semester.

GPA is the sum of the products of the number of credits of a course with the grade point scored in that course, taken over all the courses for the semester, divided by the sum of the number of credits for all courses taken in that semester.

CGPA is similarly calculated considering all the courses taken from the time of admission.

17. Awarding Degree

After successful completion of the programme, the degree will be awarded with the following classifications based on CGPA.

For First Class with Distinction the student must earn a minimum of 68 credits within four semesters for full-time / six semesters for Part time from the time of admission, pass all the courses in the first attempt and obtain a CGPA of 8.25 or above.

For First Class, the student must earn a minimum of 68 credits within two years and six months for full-time / three years and six months for Part time from the time of admission and obtain a CGPA of 6.75 or above.

For Second class, the student must earn a minimum of 68 credits within four years for full-time / six years for Part time from the time of admission.

18. Ranking of Candidates

The candidates who are eligible to get the M.E / M.Tech degree in First Class with Distinction will be ranked on the basis of CGPA for all the courses of study from I to IV semester for M.E / M.Tech full-time / I to VI semester for M.E / M.Tech part-time.

The candidates passing with First Class and without failing in any subject from the time of admission will be ranked next to those with distinction on the basis of CGPA for all the courses of study from I to IV semester for full-time / I to VI semester for M.E / M.Tech part-time.

19. Transitory Regulations

If a candidate studying under the old regulations M.E. / M.Tech could not attend any of the courses in his/her courses, shall be permitted to attend equal number of courses, under the new regulation and will be examined on those subjects. The choice of courses will be decided by the concerned Head of the department. However he/she will be permitted to submit the thesis as per the old regulations. The results of such candidates will be passed as per old regulations.

The University shall have powers to revise or change or amend the regulations, the scheme of examinations, the courses of study and the syllabi from time to time.
VISION
To nurture higher echelons of technology through participative education, innovative and collaborative research with a view to bring out employable graduates of International standard.

MISSION
- To establish state of the art facilities related to diverse dimension in the field of Instrumentation Engineering, Control Engineering, Process Control & Automation.
- To foster higher quality of education with equivocal focus in theory and practical areas of Electronics, Control and Instrumentation Engineering.
- To ensure that the dissemination of knowledge reaches the stakeholders and forge the opening of a fresh flair of human resources.
- To create opportunities for advancements in different facets of this discipline and offer avenues to reach the citadels of one’s career.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)
The major objectives of the M.E (Process Control & Instrumentation) programme are to equip the students with adequate knowledge and skills in the areas of Process Control and Instrumentation and prepare them for:
1. Imparting practical knowledge in process control, design of instrumentation systems and contribute to technological development.
2. Attaining professional competency to address the technological needs of society and industrial problems.
4. Showing the society for life-long self-governing and thoughtful learning skills in their career.
5. Exhibiting their potential in project management, collaborative and multidisciplinary task in their profession.

PROGRAMME OUTCOMES (POs)
A student who has undergone the M.E (Process Control & Instrumentation) program would have acquired abilities to

PO1: ENGINEERING KNOWLEDGE
Apply knowledge of mathematics, science and engineering in practice for instrumentation, control and automation with an ability to discriminate, evaluate, analyze and synthesize existing and new knowledge and integration of the same for enhancement of knowledge.

PO2: DECISIVE THINKING
Identify, analyse, formulate and solve complex engineering problems in instrumentation, control and automation engineering critically, to make intellectual and/or creative advances for conducting research in a wider theoretical, practical and policy context to handle emerging technologies relating to process industries.
PO3: PLAN AND PROGRESS

Solve instrumentation, control and automation problems, evaluate a wide range of potential solutions for those problems and arrive at feasible, optimal solutions after considering public health and safety, cultural, societal and environmental factors.

PO4: RESEARCH SKILLS

Extract the research skill to unfamiliar problems through literature survey and experiments, and apply appropriate research methodologies, techniques and tools, design, conduct experiments, analyze and interpret data, demonstrate higher order skill and view things in a broader perspective, contribute individually/in group(s) to the development of scientific/technological knowledge in instrumentation, control and automation domains.

PO5: USAGE OF MODERN TOOLS

Learn, Develop, Choose, apply appropriate techniques and resources, modern engineering and IT tools, including prediction and modelling, to complex instrumentation and control, automation engineering activities with an understanding of the limitations.

PO6: COLLABORATIVE AND MULTIDISCIPLINARY WORK

Collaborative and Multidisciplinary work and understanding of group dynamics, recognize opportunities and contribute positively to scientific research, demonstrate a capacity for decision-making based on open mindedness, objectivity and rational analysis in order to achieve common goals.

PO7: PROJECT MANAGEMENT

Demonstrate project management knowledge by applying the same to one’s own work, as a member and leader in a team, manage projects by considering economical and financial factors efficiently in respective disciplines and multidisciplinary environments.

PO8: SOFT SKILLS

Communicate confidently and effectively with the peers and the society at large regarding complex engineering activities, be able to comprehend and write effective reports, design documentation by adhering to appropriate standards, make effective presentations.

PO9: LIFE-LONG LEARNING

Recognise the need for Life-long Learning with a high level of enthusiasm and commitment to improve knowledge and competence continuously and independently.

PO10: ETHICAL PRACTICES AND SOCIAL RESPONSIBILITY

Ethical practices and social responsibility, professional code of conduct, ethics of research and scholarship, consideration of the impact of research outcomes on professional practices and an understanding of responsibility to contribute to the community for sustainable development of society.

PO11: INDEPENDENT AND REFLECTIVE LEARNING

Independent and reflective learning, observe and examine critically the outcomes of one’s actions and make corrective measures subsequently, and learn from mistakes without depending on external feedback.

SYLLABUS

COURSE OBJECTIVES

- To introduce the dynamics of various processes and modelling of physical processes using first principles.
- To get adequate knowledge about basic control actions and related issues.
- To educate the effect of various control actions and the methods of tuning the controller.
- To introduce the concept of MIMO process and its control schemes.
- To study the control schemes for typical processes and its P & I Diagram.

**Advanced Control Systems**: Feedback control of systems with large dead time, dead time compensation – cascade control – feed forward and ratio control – adaptive and inferential control systems – internal model control – model predictive control – introduction to MPC schemes.

**Control of Typical Processes**: Distillation column, control of top and bottom product composition, reflux ratio. CSTR, four – tank system and PH process. Piping and Instrumentation Drawing (P&I D) of control loops.

REFERENCES

**COURSE OUTCOMES**

At the completion of this course, students will be able to:

1. Understand basic principles and importance of process control in industrial process plants.
2. Acquire knowledge of dynamic modelling and system behaviour.
3. Understand the need for mathematical basis for the design of control systems.
4. Design and implementation of advanced controllers.
5. Understand the concept of MIMO process.

**COURSE OBJECTIVES**

- To impart knowledge on the various techniques used for the measurement of primary industrial parameters like flow, level, temperature and pressure.
- To make students understand the important parameters to be monitored and analyzed in Thermal power plant and Nuclear power plant.
- To get an exposure on the important parameters to be monitored and analyzed in Petrochemical Industry.
- To learn about the intrinsic safety techniques adapted in industries.
- To familiarize the students about the safety instrumented system and method to evaluate risk and safety instrumentation levels.
Measurement of Important Process Variables:
Measurement principles of temperature, pressure, level and flow measuring instruments - general considerations for instrument mounting- calibration principles for temperature and pressure transmitters- semiconductor transducers for temperature, pressure, level, and flow.

Instrumentation for Thermal Power Plant:
Measurement of fuel flow, air flow, drum level, steam pressure, steam temperature - selection and installation of instruments for these variables - dissolved oxygen analyzer -flue gas analyzer -ph analyzer - coal /oil analyzer - pollution instruments-dust monitor.

Instrumentation for Nuclear Power Plant:
Nuclear radiation sensors- out of core–neutron sensors-in core – process instrumentation: temperature sensing, pressure sensing and transmitting, flow sensing, level and position sensing, steam properties sensing, water properties sensing, gas properties sensing – special sensor for sodium cooled reactors and gas cooled reactors.

Instrumentation for Petro Chemical Industry/Refinery:
Selection and installation of instruments for the measurement of temperature, level, flow and pressure in refinery – measurements in pyrolysis, catalytic cracking and reforming processes-hydrocarbon analyser-sulphur in oil analyzer.

Instrumentation for Industrial Safety:
Intrinsic safety: Definition - conservation and emergency vents - flame, fire and smoke detectors - leak detectors - metal detectors. safety instrument system (sis): need, features, components, difference between basic process control system and sis.

Safety Integrity Levels (SIL), Determination method : as -low as reasonably practical (alarp), evaluating risk: risk matrix, risk graph, layers of protection analysis (lopa) – issues related to system size and complexity –issues related to field device safety.

REFERENCES

COURSE OUTCOMES
At the end of the course the students will be able to
1. Apply knowledge on measurement and calibration principles of basic industrial process variables to ensure proper functioning of industrial systems.
2. Appropriately select and mount the instruments for a particular process.
3. Execute instrumentation requirements in various process industries such as Thermal power plant and Nuclear power plant and Petro Chemical/ Refinery.
4. Identify hazardous area and ensure safety measures by evaluating risk levels and features.
5. Design and implement a safety instrumentation system.

COURSE OBJECTIVES
- To understand the research problem formulation and analyze research related information.

  Effective literature studies: Approaches, analysis Plagiarism, Research ethics.

**New Developments in IPR**: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs

**REFERENCES**

**COURSE OUTCOMES**
At the end of this course, students will be able to

1. Understand research problem formulation.
2. Follow research ethics
3. Understand that today’s world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
4. Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis the need of information about Intellectual Property Right to be promoted among students in general & engineering in particular.
5. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

COURSE OBJECTIVES

- To impart knowledge on the real time process modelling principle.
- To design and implement tuning techniques of PID controller for a typical process and verify its performance in MATLAB/Simulink environment.
- To understand the calibration procedure for various transmitters.
- To implement closed loop control for processes like air temperature, air flow and level.
- To familiarize students with design and simulation of advanced control strategies for the given process.
- To develop programming skill for a typical PLC.

LIST OF EXPERIMENTS

1. (a) Determination of control valve characteristics
   (b) Determination of characteristics of capacitive level transmitter
2. (a) Controller tuning using continuous cycling method
   (b) Controller tuning using Process Reaction Curve method
3. Modeling of an prototype air temperature process
4. Study of Air flow control system and determination of transfer characteristics of I/P converter, Control Valve and Flow transmitter
5. Modeling and simulation of a Level process using TUTSIM software package
6. Determination of characteristics of a PID controller using MATLAB (Simulink) software
7. Determination of Transfer function (Experimental model) of Level process
8. Design and simulation of Averaging Control

COURSE OUTCOMES

At the end of the practical course the students will be able to:

1. Identify the types of control valve for a particular process number to determine the characteristics of level and flow transmitter and identify the error if any
2. Model and design controllers for different processes.
3. Design and implement advanced control techniques.
4. Develop and program with TUTSIM and MATLAB software for process control applications.
5. Do the modeling of a real time process.

COURSE OBJECTIVES

- To impart knowledge about the implementation of Auto/Manual switch in PID controller.
- To study and implement anti-reset windup scheme and various practical forms of PID controller.
- To design and implement an electronic PID controller.
- To design and implement signal conditioning circuits for various processes.
- To learn the design and development procedure of cold junction compensation scheme for a thermocouple using RTD.

LIST OF EXPERIMENTS

1. (a) Implementation of Auto/Manual switch in PID controller
   (b) Implementation of anti-reset windup scheme
2. Design of an Annunciator circuit using PLC
3. (a) Implementation of practical forms of PID controller
   (b) Design and simulation of two position controller for a Thermal process using Electronic Work Bench (EWB) software
4. Design and implementation of electronic PID controller
5. Realization of first order and second order systems with dead time using electronic circuits
6. Design and implementation of cold junction compensation scheme using RTD
7. (a) Design of Signal conditioning circuit for the given process
   (b) Design of Alarm circuit using Logic gates.
8. Design of control valve sizing and orifice.

COURSE OUTCOMES

At the end of the practical course the students will be able to

1. Design and implement the electronic PID controller with auto manual switch.
2. Design PLC based annunciator circuit and logic gates based alarm circuits.
3. Design PID controller with anti reset windup schemes and design of practical forms of process processes.
4. Design and implement cold junction compensation schemes.
5. Design orifice for flow process and size A control valve for a particular application.

COURSE OBJECTIVES

- To provide fundamental knowledge about industrial data acquisition system and different industrial networking standards.
- To provide comprehensive knowledge about the methods of internetworking.
- To give basic knowledge in the architecture and local control unit of distributed control system.
- To give adequate information about SCADA, PLC and OPC.
- To give basic knowledge about HART, field bus, and control network technology.

**MODEM:** Data coding methods - error detection, correction and encryption.
Fiber Optic transmission - Optical fiber Cables - light sources and detectors.
Architecture of a PLC – Analog and digital types of I/O modules – PLC system memories - Program and data organization inside a PLC - Networking of multiple PLC.

**Methods of Computer Control of Processes, their Configuration and Comparison:** Direct Digital Control, Supervisory Digital Control, Distributed Control System (DCS).

DCS: - Local Control Unit (LCU) and architecture - LCU languages - LCU - Process interfacing issues. Operator interface - requirements Engineering interface - requirements - displays - alarms and alarm management. Factors to be considered in selecting a DCS. Introduction to SCADA, OLE for Process control (OPC).

**Network Models and Protocols:** OSI model - Data link Control protocol. Media access protocol: Command/response - Token passing - CSMA/CD, TCP/IP. Bridges - Routers - Gateways. Standard ETHERNET and Industrial ETHERNET Configuration - Special requirement for networks used for Control, Wireless LAN. Introduction to MODBUS, CANBUS, LON WORKS, FIP.

REFERENCES

COURSE OUTCOMES
At the end of the course the students will be able to:
1. Understand the basic principle and modes of digital data transmission and communication.
2. Understand the various types of buses and devices used for data communication in industry.
3. Implement the automation concepts in a process industry with DCS and PLC.
4. Understand different networking topologies for data communication in process industries.
5. Use HART and Filedbus protocols for process industries.

COURSE OBJECTIVES
- To impart knowledge on various non parametric approach based system identification.
- To make the student understand the principles of state space modelling of linear and nonlinear systems.
- To know non recursive and recursive parametric identification approaches.
- To learn to develop robust parametric identification methods.
- To impart knowledge pertaining to practical aspects of system identification and control.

**REFERENCES**
COURSE OUTCOMES

At the end of the course, the students will be able to

1. Identify a suitable continuous time domain identification method for the taken up process.
2. Select a particular state space model based on specific control engineering problem.
3. Understand and implement the various complexity estimation methods, offline and online, open and closed loop estimation methods for modelling and estimating a process.
4. Gain an idea for Robust parameter estimation.
5. Select a specific identification method with an approximately equal complexity for the case studies.

COURSE OBJECTIVES

- To impart knowledge on various digital Controller design.

- To design and implement tuning techniques of PID controller and verify in MATLAB/Simulink environment.

- To design and implement closed loop control for processes like Air temperature, Air flow and Level using LABVIEW software.

- To familiarize students with fundamental programming concepts in PLC and implementation of ladder logic for an automation application.

- To study the applications of SCADA and DCS for a typical process control application.

LIST OF EXPERIMENTS

1. Design and Simulation of Dead-beat controller using TUTSIM
2. a) Design of Dead time compensator using smith predictor algorithm using MATLAB/SIMULINK
   b) Design and Simulation of Inverse response compensator using MATLAB/SIMULINK
3. Study of LABVIEW software
4. a) Study of Programmable Logic Controller (Keyence PLC)
   b) Direction Control of DC motor using PLC
5. Study of SCADA software (Intouch wonderware) 
6. PC based control of a simulated process 
7. Design of Fuzzy & Neuro controller for a Pressure Process 
8. Study of DCS (Centum CS 3000) 

COURSE OUTCOMES 
At the end of the practical course the students will be able to 
1. Model and design digital controllers for different processes. 
2. Apply artificial intelligence algorithm for process control. 
3. Get hands on experience on PLC interfacing and troubleshooting 
4. Demonstrate his/her ability to develop code in LabView and SCADA software for process control applications. 
5. Understand the features of DCS with real-time interface.

COURSE OBJECTIVES 
- To expose the students to occupational environment related to controls and instrumentation. 
- To create opportunity for acquiring practical skills in carrying out preventive maintenance of various field instruments. 

The students should undergo training program in reputed industries in the field of Process Control and Instrumentation during the summer vacation (at the end of second semester for full time) for a minimum stipulated period of four weeks. After completion of the training, the students have to submit a detailed report within ten days from the commencement of the third semester for full time on the training they had undertaken. The students will be evaluated by a team of staff members nominated by the head of the department through a viva voce examination. 

COURSE OUTCOMES 
At the end of the training the students will be able to 
1. Face the challenges related to work environment 
2. Manage the issues arising during the execution of projects related to Process Control and Instrumentation.

COURSE OBJECTIVES

- To develop the ability to solve a scientific problem related to controls and instrumentation all the way from its identification, literature review till the successful solution of the same.
- To train the students in preparing project reports, face reviews and viva-voce examination.

COURSE OUTCOMES

Upon completion of this course, the students will be able to:
1. Take up any challenging practical problems and find solution
COURSE OBJECTIVES

- To make students familiarize orifice design and control valve sizing procedure.
- To impart knowledge on the design of signal conditioning circuits for the measurement of level and temperature.
- To develop skills needed to design and test Analog/ Digital PID controller, data acquisition system and alarm annunciator.

Orifice meter - design of orifice for given flow condition - design of rotameter.
Control valves - design of actuators and positioners - valve characteristics - sizing of control valves - liquid, gas and steam services.

Design of cold junction compensation circuit for thermocouple using RTD. Transmitters - zero and span adjustment in D/P transmitters - temperature transmitters- design of RTD based temperature transmitter, thermocouple based temperature transmitter, capacitance based level transmitter and smart flow transmitters, design of flapper-nozzle and design of pneumatic amplifiers.

Design of ON / OFF Controller using Linear Integrated Circuits- Electronic P+I+D controllers - design - adjustment of set point, bias and controller settings- Design of microprocessor based P+I+D controller - Design of microprocessor based system for data acquisition.

Design of alarm and annunciation circuits using analog and digital circuits – Design of Programmable Logic Controller - Design of configurable sequential controller using PLDs.

REFERENCES

COURSE OUTCOMES
At the end of the course, the students will be able to
1. Carry out orifice and control valve sizing for liquid/steam services.
2. Design signal conditioning circuits for temperature sensors, V/I, I/V P/I and I/P converters.
3. Design transmitters.
4. Design, fabricate and test PID controllers and alarm circuits.
5. Design microprocessor based data acquisition system

COURSE OBJECTIVES
- To familiarize the students with concepts of fiber optic sensors, modulating techniques and measurement methods.
- To impart knowledge about laser instrumentation and its application in industry.
- To equip the students about the principle and application of ultrasonic instrumentation systems.
- To learn virtual instrumentation system and software.
- To understand about the smart instruments used in transmitters, communication and measurement systems.

Fiber Optic Instrumentation
Principle of light propagation through a fiber- different types of fiber and their properties-fiber optic sensors- fiber optic instrumentation systems- different types of modulators- optical detectors- measurement of length by interferometer method-moiré fringes- Measurement of pressure, temperature, current, voltage, liquid level and strain.

Laser Instrumentation
Fundamental characteristics of laser-three level and four level laser-laser modes- resonator configuration-q switching and mode locking-cavity dumping-types of laser- measurement of length, distance, velocity, acceleration, current, voltage and atmospheric effects using laser- material processing- laser heating, welding, melting and trimming of materials- removal and vaporization.
Ultrasonic Instrumentation

Principle and propagation of ultrasonic waves - characterization of ultrasonic transmission-reflection and transmission coefficients-generation of ultrasonic waves-magnetostrictive and piezoelectric effects- ultrasonic test methods-pulse echo, transit time, resonance, direct contact and immersion type-measurement of thickness, depth, flow using ultrasonic sensors.

Virtual Instrumentation

Block diagram and architecture of virtual instrumentation- VI's and sub VI's-loops and charts-arrays, clusters and graphs-case and sequence structures-formula nodes, local and global variables-string and file i/o-instrument drivers-publishing data in the web.-simulation of system using VI-development of virtual instrument using GUI.

Smart Measuring Instruments

Smart/Intelligent transducer- Comparison with conventional transducers-Self diagnosis and remote calibration features-Smart transmitter with HART communicator protocol-Measurement of temperature, pressure and Flow using HART transmitter.

REFERENCES

COURSE OUTCOMES

At the end of the course the students will be able to
1. Select fiber optic sensors and Design a fiber optic based instrumentation system for the measurement of industrial process variables.
2. Apply the principle of Lasers and develop laser based measuring instrumentation system.
3. Develop ultrasonic instrumentation system for measurement and analysis.
4. Design systems applying virtual instrumentation principles.
5. Handle smart instruments and HART transmitters.

### Course Objectives

To enable students to acquire knowledge about

- The different methods of crude oil recovery, processing and refining
- Important Unit operations in petroleum refinery and petrochemical industry
- Production routes of important petrochemicals, and Control of selected petrochemicals production processes
- Hazards and therefore the necessary safety measure in planning and function of petrochemical Industry.

### Oil Extraction and Processing

Techniques used for oil discovery:
- Seismic survey
- Methods of oil extraction
- Oil rig system
- Primary, Secondary and Enhanced oil recovery
- Separation of gas and water from oil
- Control loops in oil gas separator
- Scrubber
- Coalescer.

### Petroleum Refining

Petroleum refining process:
- Unit operations in refinery:
  - Thermal cracking
  - Catalytic cracking
  - Catalytic reforming
  - Polymerization
  - Isomerization
  - Alkylation
  - Production of ethylene, acetylene and propylene from petroleum.

### Chemicals from Petroleum

Chemicals from methane, acetylene, ethylene and propylene:
- Production routes of important petrochemicals such as polyethylene, polypropylene, ethylene dioxide, methanol, xylene, benzene, toluene, styrene, VCM and PVC.

### Control Loops in Petrochemical Industry

Control of:
- Binary and fractional distillation columns
- Catalytic and thermal crackers
- Catalytic reformer
- Alkylation process
- Polyethylene production
- VCM and PVC production.

### Safety in Instrumentation System

Area and material classification:
- National Electric Code (NEC)
- International Electro technical Commission (IEC)
- Techniques used to reduce explosion hazards
- Pressurization techniques
- Type X, Type Y and Type Z
- Intrinsic safety
- Mechanical and Electrical isolation
- Lower and Upper explosion limit.

### References

**COURSE OUTCOMES**

After completing this course the student will:

1. Gain basic knowledge about the methodologies applied for recovery and processing of petroleum.
2. Be familiar with different unit operations involved in Petroleum industry.
3. Have a general understanding of the production routes for important petrochemicals.
4. Be able to describe the control of Important processes like FCCU, Catalytic Reformer and Alkylation.
5. Be able to classify the hazardous zones and gain knowledge about the techniques used to reduce the explosion hazards.

**COURSE OBJECTIVES**

After completion of the course the students will acquire extensive knowledge about:

- Operation & importance of Instrumentation in Thermal power plant
- Development of Mathematical model of different systems in Thermal power plant
- Conventional and advanced control schemes applied to various processes in Thermal Power Plant
- Measurement of important parameters and control techniques applied to steam turbines
- Calculation and optimization of Boiler efficiency by including various losses in thermal power plant
Basics of Thermal Power Plant

Process of power generation in coal – fired and oil-fired thermal power plants-
Types of Boilers Combustion process – Super heater – Turbine – Importance of
Instrumentation in thermal power plants.

Boiler Modeling

Development of first principle and data driven models:- combustion chamber,
boiler drum, superheater and attemperator

Boiler Control

Combustion control: Air-fuel ratio control-furnace draft control –Drum level
control –Steam temperature Control- DCS in power plant – Interlocks in Boiler
Operation- Model predictive control of super heater – control of drum level using AI
techniques.

Turbine & Alternator - Monitoring and Control

Measurement of speed, vibration, shell temperature of steam turbine – Steam
pressure Control – Speed control of turbine – Alternator- Monitoring voltage and
frequency –Operation of several units in parallel- Synchronization.

Optimization Of Thermal Power Plant Operation

Determination of Boiler efficiency – Heat losses in Boiler – Effect of excess air –
Optimizing total air supply- Combustible material in ash- Reduction of turbine
losses-Choice of optimal plant parameters- Economics of operation.

REFERENCES
Delhi, 1994.
Delhi, 1995.
5. K. Krishnaswamy and M. PonniBala, “Power Plant Instrumentation”, PHI
Learning Pvt. Ltd, Delhi, 2015.

COURSE OUTCOMES
1. The student will be equipped with the basic knowledge of function of different
systems in Thermal power plant
2. The student knows the procedural steps to obtain the mathematical model of
various units in Thermal power plant
3. Will be able to explain conventional and advanced control concepts and
implementation in various processes.
4. Will get idea on the parameters to be monitored, measured and controlled in
steam turbines calculation and optimization of Boiler efficiency by including
various losses in thermal power plant.
5. Understand important control circuits in boiler and interlock in boiler
operations.
COURSE OBJECTIVES

- To provide the background for developing a VI
- To make the student become competent in using state-of-the-art VI tools.
- To enable the student to gain experience in data acquisition and instrument control

Introduction

Virtual Instrumentation: Historical perspective - advantages - block diagram and architecture of a virtual instrument - Conventional Instruments versus Traditional Instruments - data-flow techniques, graphical programming in data flow, comparison with conventional programming.

VI Programming Techniques

VIs and sub-VIs, loops and charts, arrays, clusters and graphs, case and sequence structures, formula nodes, local and global variables, State machine, string and file I/O.

Data Acquisition

Introduction to latest ADCs, DACs. Introduction to PC based data acquisition - typical plug-in data acquisition board - multiplexing of analog inputs - single ended and differential inputs - different strategy for sampling of multi channel analog inputs. Concept of universal DAQ card - use of timers/counters

VI Toolsets

Use of Analysis tools, Fourier transforms, power spectrum, correlation methods, windowing and filtering. Simulation of level, thermal, reactor processes. On-Off controller PID Controller.

Applications

Distributed I/O modules-Virtual Laboratory, Virtual Oscilloscope, Virtual function generator, Simulation of systems using VI, Development of Control system, Industrial Communication, Image acquisition and processing, Motion control. Development of Virtual Instrument using GUI, Real-time systems, Embedded Controller, OPC, HMI / SCADA software, Active X programming.

REFERENCES

COURSE OUTCOMES
At the end of the course the students will be able to

1. Develop software program in VI
2. Experiment with plug-in DAQ interfaces for prototype measurement systems
3. Implement basis concepts incorporating various VI Toolsets based on the application in Virtual Instruments.
4. Get the knowledge of Smart Sensors.
5. Get knowledge about VI for real time systems, embedded controller, HMI/SCADA software and Active X programming.

COURSE OBJECTIVES

- To make the students to understand the role of electronics and software related to current trends in automobiles.
- To provide fundamental knowledge of sensors and other technologies used in modern automobiles.
- To provide a strong knowledge on control system to improve safety measures and also to increase comforts of users.
- To impart knowledge on Automotive standards and protocols.
Introduction of Automobile System

Current trends in automobiles with emphasis on increasing role of electronics and software, overview of generic automotive control ECU functioning, overview of typical automotive subsystems and components, AUTOSAR.

Engine Management Systems

Basic sensor arrangement, types of sensors such as oxygen sensors, crank angle position sensors, Fuel metering/vehicle speed sensors, flow sensor, temperature, air mass flow sensors, throttle position sensor, solenoids etc., algorithms for engine control including open loop and closed loop control system, electronic ignition, EGR for exhaust emission control.

Vehicle Power Train and Motion Control

Electronic transmission control, adaptive power Steering, adaptive cruise control, safety and comfort systems, anti-lock braking, traction control and electronic stability, active suspension control.

Active and Passive Safety System

Body electronics including lighting control, remote keyless entry, immobilizers etc., electronic instrument clusters and dashboard electronics, aspects of hardware design for automotive including electro-magnetic interference suppression, electromagnetic compatibility etc., (ABS) antilock braking system, (ESP) electronic stability.

Automotive Standards, Protocols and Energy Management

BMS (Battery Management System), FCM (Fuel Control Module), principles of system design, assembly process of automotives and instrumentation systems.

REFERENCES

COURSE OUTCOMES

After learning this course, the students should be able to:

1. Evaluate the sensor and measuring system of automobile.
2. Design the basic modeling and control scheme for automotive systems.
3. Acquire knowledge of various automotive standards and Protocols.
4. understand the current trend in the role of electronics and softwares in automobiles.
5. Apply electronics for body dashboard and Anti Lock Braking systems.

**COURSE OBJECTIVES**

- To review the processes with special characteristics.
- To study the fundamental design and implementation of MPC.
- To study robust control system philosophy.
- To design and analyse optimal controllers.
- To understand and design controllers for MIMO process.

**Introduction to Process Control**: Review of first order and higher order systems, self and non-self regulatory processes, inverse response processes, non-minimum phase processes and open-loop unstable processes. Response to step, impulse and sinusoidal disturbances. Review of design and implementation of PID controller.

**Design of Controllers for MIMO Processes**: Introduction to Multivariable process control – selection of controlled outputs manipulation and measurements – RGA for square and non-square plants – control configuration elements –
centralized and decentralized feedback control – Trade-offs in MIMO feedback design.

REFERENCES

COURSE OUTCOMES
At the end of the course, the students will be able to
1. Able to analyse system behavior.
2. Able to understand and design MPC for a given process.
3. Ability to design robust control system.
4. Able to understand the concept of H2 and H∞ controller.
5. Able to understand and design a Multi-Input Multi-Output system.

COURSE OBJECTIVES
- To impart knowledge on how to recursively estimate the parameters of discrete input – output models (ARX/ARMAX etc) using recursive parameter estimation methods.
- To make the student understand the principles of STR, MRAC and Gain scheduling.
- To craft the student design simple adaptive controllers for linear systems using above methods.
Introduction

Introduction to System Identification: – Adaptive Control Vs Conventional feedback control - adaptive control schemes.

Gain Scheduling and Model Reference Adaptive System

Deterministic Self-tuning Regulators

Stochastic Self-tuning Regulators

Robust Self-Tuning Regulators, Practical Aspects and Case studies

Temperature control in a distillation column, chemical reactor control, pulp dryer control & control of a rolling mill.

REFERENCES

COURSE OUTCOMES
At the end of the course the student will able to
1. Design gain scheduling and the model reference adaptive systems.
2. Design different types of deterministic self tuning regulator.
3. Design different types of stochastic self tuning regulator.
5. Understand practical aspects of adaptive control schemes for industrial processes.

COURSE OBJECTIVES

- To study the statement of optimal control problem, formulation of optimal control problem and selection of performance measure.
- To understand the fundamental concepts of calculus of variation and variational approach to optimal control problems.
- To derive the expression for continuous and discrete linear optimal regulator problem.
- To study the concepts of dynamic programming and its application.
- To understand the concept of numerical solution of two point boundary value problem.

Optimal Control Problems and Performance Measures

Calculus of Variation

Fundamental concepts – extremum functionals involving single and several independent functions - final time and final state are fixed - final time is fixed and final state is free - final time is free and final state is fixed - both final time and final state are free. Piecewise smooth extremals - constrained extrema.
Variational Approach to Optimal Problems

Necessary conditions for optimal control - Pontryagin's minimum principle - state inequality constraints - minimum time problem - minimum control effort problems.

LQ Control Problem

Dynamic Programming

REFERENCES

COURSE OUTCOMES

After completion of this paper the student will

1. Understand the optimal control problem formulation and its selection of performance measures.
2. Recognize and recall the fundamentals of calculus of variation.
3. Implement optimal control concept for minimum time and minimum control effort problems.
5. Understand the concepts of dynamic programming and to find numerical solution of two-point boundary value problem.

COURSE OBJECTIVES

- To understand the need for robustness in process control
- To study the fundamentals required for robust control of a process
- To study the stability analysis of LTI system
- To design and analyse stabilizing controllers
- To study some of the methods robust optimal problems
- To give complete treatment of optimal and robust controller

Model Uncertainty and Robustness

Lyapunov Theory for LTI Systems

Stabilizing Controllers

LQR and LQG Problems

H-α Control and μ Synthesis

REFERENCES

COURSE OUTCOMES
At the end of the course, the students will be able to
1. Understand the fundamentals of robustness.
2. Understand the application of robust control in MIMO system.
3. Analyze the stability of robust system.
4. Design and analyze robust control system.
5. Understand the concepts of H-α control and μ synthesis.

COURSE OBJECTIVES
- To introduce the nature of nonlinearities found in control systems both in the forward path and in the feedback path
- To give exposure to analysis methods of nonlinear systems
- To understand the describing function analysis.
- To study about stability analysis.
- To study about nonlinear control system design.

Non Linear Systems
Non-linear Systems - Behavior of non-linear systems, jump resonance, subharmonic oscillation - Nonlinearities in control system, Nonlinear models and nonlinear Phenomena-Examples, second order systems: qualitative behavior of linear systems, Multiple Equilibria, qualitative behavior near equilibrium points

Phase Plane Analysis
Concept of phase plane analysis, Singular points - construction of phase portraits using isoclines, delta method, Lienard’s method and Pell’s method - limit cycles-existence of limit cycles.
Describing Function Analysis

Stability Analysis

Nonlinear Control System Design

Feedback Linearization- feedback linearization and the canonical form, Input-state and Input-output linearization, Input-state linearization of SISO systems and Input-output linearization of SISO systems.

REFERENCES

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basics of nonlinear systems.
2. Construct the phase plane of systems
3. Derive the describing function.
4. Understand the stability analysis of nonlinear systems.
5. Implement modelling of nonlinear systems and feedback linearization design.

- PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO8 PO9 PO10 PO11
COURSE OBJECTIVES

- To make the students understand the purpose and uses of SPC.
- To use the most common types of control charts and carry out process capability studies.
- To import knowledge about various SPC tools, data collection and construct basic control charts.
- To make the students understand concept of control charts for variables and attributes and how to interpret control chart results.
- To impart knowledge of other statistical process monitoring and control techniques.

Quality Improvement in the Modern Business Environment

The meaning of quality and quality improvement, dimensions of quality, quality engineering terminology, a brief history of quality control and improvement, statistical methods for quality control and improvement, univariate process monitoring and control.

Methods and Philosophy of Statistical Process Control

Introduction, chance and assignable causes of quality variation, statistical basis of the control chart basic principles, choice of control limits, sample size and sampling frequency, rational subgroups analysis of patterns on control charts, discussion of sensitizing rules for control charts, control charts application, the rest of the magnificent seven, implementing spc in a quality improvement program, an application of spc, applications of statistical process control and quality improvement tools in transactional and service businesses.

Control Charts for Variables

Control charts for x and r, statistical basis of the charts, development and use of x and r charts, charts based on standard values, interpretation of x and r charts, the effect of non normality on x and r charts, the operating characteristic function, the average run length for the x chart, control charts for –x and s, construction and operation of x and s charts, the x and s control charts with variable sample size, summary of procedures for x and r, and s charts, applications of variables control charts.

Control Charts for Attributes

The control chart for fraction nonconforming, development and operation of the control chart variable sample size, applications in transactional and service business, the operating characteristic function and average run calculations, control charts for nonconformities (defects).

Other Statistical Process Monitoring and Control Technique

The cumulative sum control chart, basic principles: the cusum control chart for monitoring the process mean, the tabular or algorithmic cusum for monitoring the
process mean, recommendations for cusum design, Exponential Weighted Moving Average [EWMA], EWMA for monitoring the process mean, design of EWMA, combining EPC(Engineering process control) and SPC, MINITAB software.

REFERENCES

COURSE OUTCOMES
At the end of the course, the students will be able to
1. Analyse quality control in industries.
2. Understand SPC and its design tools.
3. Construct control charts.
4. Understand the concept of variable and attribute charts.
5. Understand process monitoring and control techniques.

Course Objectives
- To review the mathematical basis of discrete time signal analysis.
- To discuss the estimation theory and predictors.
- To design and implement adaptive filters.
- To study the techniques of modern signal processing applications using multirate transforms.

**Linear Estimation and Prediction:** Maximum likelihood criterion- efficiency of estimator - least mean square error criterion-Wiener filter discrete Wiener Hoff equations-Recursive estimators - Kalman filter- linear prediction, prediction error-whitening filter, inverse filter-Levin son recursion, Lattice recursion, Lattice realization.

**REFERENCES**

**Course Outcomes**
At the end of the course the students will be able to
1. Analyse the functions and characteristics of different op-amps.
2. Familiarize with various estimation techniques.
3. Able to realize systems using different realization algorithms.
4. Able to analyze and implement different types of adaptive filters.
5. Familiarize with multirate wavelet transform and its implementation.

---
COURSE OBJECTIVES

- To understand the machine learning theory.
- To train linear and non-linear learning models.
- To build tree and ensemble based models.
- To implement clustering & dimensionality reduction techniques.
- To apply reinforcement learning techniques.

Foundations of Learning

Linear Models

Tree and Ensemble Models

Unsupervised Learning

Reinforcement Learning

REFERENCES

COURSE OUTCOMES

At the end of the course, the students will be able to

1. Demonstrate the underpinning knowledge on machine learning.
2. Apply various linear models for different class of predictions.
3. Formulate machine learning problems using tree and ensemble models.
4. Apply unsupervised learning algorithm for a typical problem.
5. Develop reinforcement learning model for process control applications.

COURSE OBJECTIVES

- To study the various parts of robots and fields of robotics.
- To study the various kinematics and inverse kinematics of robots.
- To study the trajectory planning for robot.
- To study the control of robots for some specific applications.

Basic Concepts and Power Sources and Sensors

Manipulators, Actuators and Grippers

Construction of manipulators, manipulator dynamics and force control. Electronic and pneumatic manipulator control circuits.

Path Planning

Jacobian work envelop, hill climbing techniques. Methods of Programming: Leadthrough Methods, Capabilities and limitations of Leadthrough Methods, Robot program as a path in space- Motion interpolation, Robot Programming- structure, Motion, End effectors and Sensor commands, Program control communication, Monitor mode commands and Robot programming languages.

Application and Automation

Applications of Robots

Robot Control: Linear methods, Non-linear methods- Control of Industrial Robots Using PLCs.

REFERENCES

COURSE OUTCOMES

At the end of the course, the students will be able to:

1. Expertise in fundamentals, Classification and issues related to end effectors and sensors of Robotics
2. Program, Propose and synthesize control law for a given application
3. acquire knowledge about different types of automation
4. Have knowledge about different types of robots safety issues and their applications of robots.
5. Have knowledge about various control methods of robots.

COURSE OBJECTIVES

- To expose the students to the concepts of neural networks, fuzzy logic, genetic algorithm and particle swarm optimization.
- To provide adequate knowledge of applications of neuro controller, fuzzy logic controller and hybrid controllers for real time applications.
- To expose the ideas of GA in optimization and control.

**Neural Networks for Control:** Neuro controller – Functional block diagram – Inverse dynamics – System identification. Case studies: Neuro controller for temperature, flow and level processes.

**Fuzzy Logic System:** Introduction to fuzzy logic – Fuzzy sets and Fuzzy relations: operations and properties - Fuzzification – Types of membership functions – Fuzzy rule base – Canonical rule formation – Decomposition methods.

Fuzzy Logic for control: Design of fuzzy logic controller for temperature and level processes.

**Hybrid Control Schemes:** Fuzzification and rule base using ANN – Neurofuzzy systems – Introduction to particle swarm optimization techniques – Optimization of membership function and rule base using Genetic algorithm and particle swarm optimization techniques - Hybrid control schemes for temperature and level control systems.

REFERENCES

**COURSE OUTCOMES**
At the end of the course, the students will be able to:

1. Understand the basics of ANN and derive different algorithms.
2. Understand the concept of neurocontroller and its application to process control.
3. Understand the concept of fuzzy logic control and its application to process control.
4. Understand the concept of GA to optimization problem.
5. Understand the concept of hybrid control schemes and its application to process control.

**COURSE OBJECTIVES**
- To introduce the Building blocks of Real Time Embedded System
- To familiarize the embedded hardware components & its interface
- To impart knowledge on embedded software development process
- To make the students understand the Real Time Operating Systems
- To give exposure to the Case studies in various fields

**Introduction to Real Time Systems**

**Embedded System Components and its Interface**
Embedded system definition- architecture and standards with examples - Embedded hardware processors-memory devices-Interface and Peripherals- ARM processor based embedded boards - Power and its Management.
Embedded System Software Development

Software embedded in a system – IDE , Assembler, Compiler ,linker, simulator, debugger, In - circuit Emulator(ICE), Target hardware debugging , Program modeling – Program models, Data flow model, State machine programming models, UML models - High level language descriptions in embedded system, Java based embedded system design.

RTOS based Embedded System Design

Introduction to basic concepts of RTOS –Task, Process and Threads, Interrupt routines in RTOS, Multiprocessing & Multitasking, Preemptive and non-Preemptive scheduling, Task communication – shared memory –Inter Process communication – synchronization between processes – semaphores, mail box, pipes, priority Inversion, priority Inheritance, comparison of Real time operating systems: Vxworks, µC/OS II.

CASE STUDIES

Case studies of Embedded System Design and Coding in application areas of digital consumer electronics ,automotives and networking/communication.

REFERENCES

COURSE OUTCOMES

At the end of the course, the students will be able to :
1. Understand the fundamental of RTS and its application areas.
2. Understand the embedded system concepts for RTS.
3. Understand the software development environment for specific application.
4. Design RTOS with embedded system.
5. Understand the concept behind the applications as case studies.

COURSE OBJECTIVES

- To learn about electric drives & its types.
- To acquire knowledge about the circuit model of electric motors.
- To implement the power converters for the drives by efficient control algorithms.
- To understand the need for the digital controllers.
- To study about the generation of control pulses for power electronic converters and their applications.

Introduction to Electric Drives: Classification, characteristics and advantages of electric drives – Speed- torque characteristics of various types of loads and drive motors – Joint speed- torque characteristics - Selection of power rating for drive motor based on thermal limits – Overload capacity – Starting, braking and reversing methods for various types of motors.

Control of DC Drives: Analysis of series and separately excited DC motor with single phase converters operating in different modes and configurations – Analysis of series and separately excited DC motor fed from different choppers – two quadrant and four quadrant operation – Closed loop control of dc drives – Design and analysis of controllers for load changes.

Digital Techniques in Speed Control: Advantages and limitations – Microprocessor, microcontroller and PLC based control of drives – Selection of drives and Control schemes for paper mills, cement mills, sugar mills.

REFERENCES

COURSE OUTCOMES
At the end of the course, the students will be able to

1. Get a thorough understanding of motor-load system dynamics and stability, modern drive system objectives and fundamentals of DC and AC motors.
2. Model both DC and AC motors in various conventional methods.
3. Design and analyze both converter and chopper driven DC drives.
4. Understand conventional control techniques of AC drives and will have the ability to design and analyze such system.
5. Get a detailed knowledge on advanced high performance control strategies for AC drives and emerging technologies in electric drives.

COURSE OBJECTIVES
- To introduce the components of digital control system
- To provide knowledge on pulse transfer functions and their analysis
- To Introduce Stability Concepts In Discrete Domain
- To Educate On Tuning Of PID Controllers In Discrete Domain
- To Introduce State Variable Analysis In Discrete Domain

Introduction
Advantages of Digital control systems - Practical aspects of the choice of sampling rate and multirate sampling - Basic discrete time signals - Quantization - Sampling theorem - Data conversion and Quantization - Sampling process - Mathematical modeling - Data reconstruction and filtering of sampled signals.

Z - Transform and Inverse Z Transform
Relationship between s - plane and z - plane - Difference equation - Solution by recursion and z - transform - pulse transfer functions of the zero - order hold and relationship between G(s) and G(z)– Bilinear transformation.

Digital Control Systems
Pulse transfer function - z transform analysis of open loop, closed loop systems - Modified z Transform. Root loci - Frequency domain analysis - Bode plots - Gain margin and phase margin - Design of Digital control systems based on Root Locus Technique.

Controllability and Observability
Concepts on Controllability and Observability - Digital state observer: Design of the full order and reduced order state observer - Pole placement design by state feedback.
Stability Analysis

REFERENCES

COURSE OUTCOMES
At the end of the course the students will be able to
1. Analyse digital systems in time domain
2. Analyse digital systems in frequency domain
3. Model and analyse digital systems in state space representation
4. Design controllers for digital systems in state space representation
5. Understand the concept of stability in discrete domain.

COURSE OBJECTIVES

- To introduce the technologies and applications for the emerging domain of wireless sensor networks.
- To impart knowledge on the design and development of the various layers in the WSN protocol stack.
- To elaborate the various issues related to WSN implementations.
- To familiarize the students with the hardware and software platforms used in the design of WSN.

Introduction: Challenges for wireless sensor networks, Comparison of sensor network with ad hoc network, Single node architecture – Hardware components, energy consumption of sensor nodes, Network architecture – Sensor network scenarios, types of sources and sinks, single hop versus multi-hop networks, multiple sinks and sources, design principles, Development of wireless sensor networks.

Physical Layer: Wireless channel and communication fundamentals – frequency allocation, modulation and demodulation, wave propagation effects and noise, channels models, spread spectrum communication, packet transmission and synchronization, quality of wireless channels and measures for improvement, physical layer and transceiver design consideration in wireless sensor networks, energy usage profile, choice of modulation, power management.
**Data Link Layer:** MAC protocols – fundamentals of wireless MAC protocols, low duty cycle protocols and wakeup concepts, contention-based protocols, Schedule-based protocols, Link Layer protocols – fundamentals task and requirements, error control, framing, link management.

**Network Layer:** Gossiping and agent-based uni-cast forwarding, Energy-efficient unicast, Broadcast and multicast, geographic routing, mobile nodes, Data-centric and content-based networking – Data-centric routing, Data aggregation, Data-centric storage, Higher layer design issue.

**REFERENCES**

**COURSE OUTCOMES**
At the end of the course, the students will be able to
1. Understand the challenges in wireless sensor networks and various components involved in it.
2. Analyze WSN with respect to various performance parameters in the protocol stack.
3. Understand MAC algorithms and Network protocols used for specific WSN applications.
4. Understand the concept of network layer design issues related to higher layers.
5. Design and develop a WSN for a given application.

<th>19EIPCOEXX</th>
<th>DIGITAL IMAGE PROCESSING</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>L</td>
</tr>
<tr>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>

**COURSE OBJECTIVES**
- To study the basics of image processing and its applications.
- To familiarize with image enhancement and image compression techniques.
- To learn about image restoration techniques and implementation of projection algorithms.

**Digital Image Processing:** Origin – components - examples of fields that use DIP.
Digital Image Fundamentals: Elements of visual perception, light and the EM spectrum, a simple image formation model, image sampling and quantization, some basic relationships between pixels. Image transforms - Two dimensional orthogonal and unitary transforms - properties of unitary transform.

**Image Compression and Segmentation:** Compression models - elements of information theory - error free compression - run length coding - loss less and lossy predictive coding - image compression standards. Image Segmentation - Detection of discontinuities, point, line and edge detections, gradient operators, Laplacian, edge linking and boundary detection, thresholding, region based segmentation.

**Image Reconstruction from Projections:** Radon transform-inverse radon transform back projection operator-convolution back projection- parallel beam geometry-Fan beam geometry. MRI Fourier reconstruction.

REFERENCES

**COURSE OUTCOMES**
At the end of the course the students will be able to
1. Analyze the basics of image processing.
2. Familiarize with image enhancement techniques.
3. Compress an image using various compression techniques.
4. Restore an image from its degraded version.

**COURSE OBJECTIVES**
- To learn the concepts and techniques used in sensor data fusion.
- To understand the role of Mathematical tools used.
- To elaborate the concept of Kalman filter to data fusion problems.
- To impart knowledge on advanced filtering techniques.

**Mathematical Tools Used**: Algorithms, Taxonomy of algorithms for multisensor data fusion co-ordinate transformations, rigid body motion, Dependability and Markov chains, Meta – heuristics, Data association, Identity declaration.

**Estimation**: Kalman filtering, practical aspects of Kalman filtering, Extended Kalman filters, Partial filter, Decision level identify fusion, Knowledge based approaches.

**Advanced Filtering**: Data information filter, extended information filter, Decentralized and scalable decentralized estimation, Sensor fusion and approximate agreement, Optimal sensor fusion using range trees recursively, Distributed dynamic sensor fusion.

**REFERENCES**

**COURSE OUTCOMES**
At the end of the course the students will be able to
1. Understand the importance of using data fusion in multi-sensor systems.
2. Understand simple approaches to data fusion for enhancing sensor reliability.
3. Derive and apply the kalman filter to data fusion problems.
4. Understand the importance of sensor management and data association.
5. Apply advanced filtering schemes for optimal sensor fusion

**COURSE OBJECTIVES**
Students will be able to:
- Understand that how to improve your writing skills and level of readability
- Learn about what to write in each section
• Understand the skills needed when writing a Title. Ensure the good quality of paper at very first-time submission syllabus.

Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

Key skills are needed when writing a Title, Key skills are needed when writing an Abstract, Key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature,

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the conclusion.

Useful phrases, how to ensure paper is as good as it could possibly be the first-time submission.

<thead>
<tr>
<th>19EIPCACXX</th>
<th>DISASTER MANAGEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>20000</td>
<td></td>
</tr>
</tbody>
</table>

COURSE OBJECTIVES

Students will be able to:
• Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
• Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
• Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
• Critically understand the strengths and weaknesses of disaster management approaches, planning and programming.

Introduction Disaster Definition, Factors And Significance; Difference Between Hazard And Disaster; Natural And Manmade Disasters: Difference, Nature, Types And Magnitude.

Repercussions of Disasters and Hazards Economic Damage, Loss of Human And Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts And Famines, Landslides And
Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks And Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

**Disaster Prone Areas in India** Study of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics

**Disaster Preparedness and Management** Preparedness: Monitoring Of Phenomena Triggering A Disaster Or Hazard; Evaluation Of Risk: Application Of Remote Sensing, Data From Meteorological And Other Agencies, Media Reports: Governmental And Community Preparedness.

**Disaster Mitigation Meaning** Concept And Strategies Of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation And Non-Structural Mitigation, Programs Of Disaster Mitigation In India.

**COURSE OBJECTIVES**
- To get a working knowledge in illustrious Sanskrit, the scientific language in the world
- Learning of Sanskrit to improve brain functioning
- Learning of Sanskrit to develop the logic in mathematics, science & other subjects
- Enhancing the memory power
- The engineering Scholars equipped with the Sanskrit will be able to explode the huge knowledge from ancient literature.
  - Alphabets in Sanskrit, past/ present/ future tense, simple sentences.
  - Order, introduction of roots technical information about Sanskrit literature.
  - Technical concepts of Engineering – electrical, mechanical, architecture, mathematics

**REFERENCES**
1. “Abhyaspustakam” – Dr.Vishwas, Samskrita-Bharti Publication, New Delhi
2. “Teach Yourself Sanskrit” PrathamaDeeksha-VempatiKutumbshastri, Rashtriya Sanskrit Sansthanam, New Delhi Publication
### COURSE OUTCOMES

Students will be able to

1. Understanding basic Sanskrit language
2. Ancient Sanskrit literature about science & technology can be understood.
3. Being a global language, will help to develop logic in students.

<td>L</td>
</tr>
<tr>
<td></td>
<td>2</td>
</tr>
</tbody>
</table>

### COURSE OBJECTIVES

- Understand value of education and self-development
- Imbibe good values in students
- Let the should know about the importance of character

Importance of cultivation of values, Sense of duty, Devotion, Self-reliance. Confidence, Concentration. Truthfulness, Cleanliness.

Character and Competence – Holy books vs Blind faith, Self-management and Good health, Science of reincarnation, Equality, Nonviolence, Humility, Role of Women. All religions and same message, Mind your Mind, Self-control, Honesty, Studying effectively.

### REFERENCE

### COURSE OUTCOMES

Students will be able to

1. Get the knowledge of self-development.
2. Learn the importance of Human values
3. Develop the overall personality

<th>19EIPCACXX</th>
<th>CONSTITUTION OF INDIA</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>L</td>
</tr>
<tr>
<td></td>
<td>2</td>
</tr>
</tbody>
</table>

### COURSE OBJECTIVES

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- To address the growth of Indian opinion regarding modern Indian intellectuals’ constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

**History of Making of the Indian Constitution:**
History, Drafting Committee, (Composition & Working)

**Philosophy of the Indian Constitution:**
Preamble, Salient Features

**Contours of Constitutional Rights & Duties:**

**Organs of Governance:**
Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive, President, Governor, Council of Ministers, Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions.

**Local Administration:**
District’s Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation.

Pachayati raj: Introduction, PRI: ZilaPachayat, Elected officials and their roles, CEO ZilaPachayat: Position and role. Block level: Organizational Hierarchy (Different departments),

Village level: Role of Elected and Appointed officials, Importance of grass root democracy.

**Election Commission:**
Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners, State Election Commission: Role and Functioning. Institute and Bodies for the welfare of SC/ST/OBC and women.

**REFERENCES**
1. The Constitution of India, 1950 (Bare Act), Government Publication.

**COURSE OUTCOMES**
Students will be able to:

1. Discuss the growth of the demand for civil rights in India for the bulk of Indians before the arrival of Gandhi in Indian politics.
2. Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India.
3. Discuss the circumstances surrounding the foundation of the Congress Socialist Party (CSP) under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct.

**COURSE OBJECTIVES**
- Review existing evidence on the review topic to inform programme design and policy
- Making undertaken by the DfID, other agencies and researchers.
- Identify critical evidence gaps to guide the development.

**Introduction and Methodology**

**Thematic Overview**

Pedagogical practices are being used by teachers, in formal and informal classrooms in developing countries. Curriculum, Teacher education.

**Evidence on the Effectiveness of Pedagogical Practices**

Methodology for the in depth stage: quality assessment of included studies. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? Theory of change. Strength and nature of the body of evidence for effective pedagogical practices. Pedagogic theory and pedagogical approaches. Teachers’ attitudes and beliefs and Pedagogic strategies.

Professional development: alignment with classroom practices and follow-up support, Peer support, Support from the head teacher and the community. Curriculum and assessment, Barriers to learning: limited resources and large class sizes.

**Research gaps and future directions**

Research design, Contexts, Pedagogy Teacher education, Curriculum and assessment, Dissemination and research impact.

**REFERENCES**

**COURSE OUTCOMES**

Students will be able to understand:
1. What pedagogical practices are being used by teachers in formal and informal classrooms in developing countries.
2. What is the evidence on the effectiveness of these pedagogical practices, in what conditions, and with what population of learners.
3. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
