M.E. (STRUCTURAL ENGINEERING)
Choice Based Credit System
(Full-Time) & (Part-Time)

CURRICULUM AND SYLLABI
BASED ON
R-2019

MEETING OF BOARD OF STUDIES IN
C & S HELD ON
09.11.2018
DEPARTMENT OF CIVIL & STRUCTURAL ENGINEERING

VISION

To impart high quality education and technical expertise to the students and inculcate in them humanistic attitude, scientific temper, sense of commitment to the profession and spirit of participation in nation building.

MISSION

M1 The ultimate goal of the Department of Civil and Structural Engineering is to provide quality education towards preparing nationally competitive students and trend setters for the future generation in the realm of technical education.

M2 The student should be able to assimilate the available theories, explore new frontiers to propound new theories which will result in improving the quality of life of the people.

M3 To develop their personality in a healthy way and to provide opportunities for acquiring knowledge in state-of-the-art research; and to provide service to the university, engineering profession, and the public through consultancy services.

M4 To provide students with hands on training in latest technologies with supporting softwares.

M5 To facilitate effective interactions among faculty and students and foster networking with alumni, industries and other reputed institutions.

M.E. (STRUCTURAL ENGINEERING) PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

<table>
<thead>
<tr>
<th>PEO</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PEO1</td>
<td>To develop the technical and engineering skills of the students and to train them in applying fundamental principles in the field of Structural Engineering domain feeding the needs of global expectations with professional competence.</td>
</tr>
<tr>
<td>PEO2</td>
<td>To enable the graduates to apply sustained learning, their engineering skills and adopting to multidisciplinary situations through graduate work.</td>
</tr>
<tr>
<td>PEO3</td>
<td>To expose the students to the latest innovations and trends in the field of Structural Engineering in theory, professional development and self-study in Structural Engineering and Practice and tuning the academic programmes periodically to make the students fit for a professional job, a research assignment or self-employment.</td>
</tr>
<tr>
<td>PEO4</td>
<td>To impart communication, analytical and soft skills for the students towards either placing them in a comfort zone in their profession or in a path to pursue graduate education master and doctoral degree.</td>
</tr>
</tbody>
</table>
To produce Structural Engineers who integrate and build on the program's core curricular concepts in the pursuit of professional leadership, teamwork, life-long learning, and successful career advancement.

### M.E.(STRUCTURAL ENGINEERING) - PROGRAMME OUTCOMES (POs)

<table>
<thead>
<tr>
<th>PO</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PO1</td>
<td><strong>Engineering knowledge:</strong> Apply the knowledge of Civil and Structural Engineering fundamentals to identify, formulate and present solutions to technical problems in their field of expertise.</td>
</tr>
<tr>
<td>PO2</td>
<td><strong>Problem analysis:</strong> Identify, formulate, review research literature and analyse complex engineering problems reaching substantiated conclusions using the concepts of that required advanced knowledge within the field.</td>
</tr>
<tr>
<td>PO3</td>
<td><strong>Design / Development of solutions:</strong> Design solutions for Structural engineering related engineering problems and design system components or processes that meet the desired specifications.</td>
</tr>
<tr>
<td>PO4</td>
<td><strong>Conduct investigations:</strong> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.</td>
</tr>
<tr>
<td>PO5</td>
<td><strong>Modern tool usage:</strong> Create, select and apply appropriate techniques, resources and modern engineering tools including prediction ad modelling to Structural analysis activities with an understanding of the limitations.</td>
</tr>
<tr>
<td>PO6</td>
<td><strong>The engineer and society:</strong> Apply reasoning informed by the contextual knowledge and impact of Structural systems and engineering solutions to the society and the consequent responsibilities relevant to the professional engineering practice.</td>
</tr>
<tr>
<td>PO7</td>
<td><strong>Environment and sustainability:</strong> Understand the sustainability of design commutation systems with respect to environmental and social issues by their knowledge of contemporary issues in their expertise.</td>
</tr>
<tr>
<td>PO8</td>
<td><strong>Ethics:</strong> Apply ethical principles and commit to professional ethics and responsibilities and norms of the structural engineering practice.</td>
</tr>
<tr>
<td>PO9</td>
<td><strong>Individual and team work:</strong> Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings.</td>
</tr>
<tr>
<td>PO10</td>
<td><strong>Communication:</strong> Communicate professionally and technically on complex engineering activities with their peer engineering community and society in an effect way, such as, being able to comprehend effective reports and design documents, make effective presentations and make and execute clear instructions.</td>
</tr>
</tbody>
</table>
PO11  **Project management and finance:** Demonstrate the knowledge and understanding of
the engineering principles by applying the gained knowledge, to manage projects and in
multidisciplinary environments.

PO12  **Life-long learning:** Recognize the need, adopt themselves for the preparation and ability
to engage in independent life-long learning wholly to the demands of the communication
and technical changes.

COURSE OBJECTIVES:
- To make the students obtain influence coefficients for hyperstatic structures
- To enable the students apply stiffness method to discrete structures
- To train the students for solving planar structures by member and structure approaches
- To familiarise the students with solving simple boundary value problems
- To provide a basic understanding of the finite element method.

Influence Coefficients
Physical Significance - Effects of Settlements - Temperature Change and Lack of Fit - Member Approach and Structure Approach.

Stiffness Method applied to Large Frames
Local Coordinates and Global Coordinates - Stiffness Matrix Assembly of Structures: Stiffness Matrix in Global Coordinates - Boundary Conditions - Solution of Stiffness Matrix Equations - Calculation of Reactions and Member Forces.

Applications to Simple Problems
Beams - Plane Trusses - Plane Rigid Jointed Frames and Grids by Structure Approach and Member Approach.

Boundary Value Problems (BVP)
Approximate Solution of Boundary Value Problems - Modified Galerkin Method for One-Dimensional BVP - Matrix Formulation of the Modified Galerkin Method.

Linear Element
Shape Functions - Solution for Poisson’s Equation - General One Dimensional Equilibrium Problem.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Obtain influence coefficients for hyperstatic structures
2. Apply stiffness method to discrete structures
3. Analyse planar structures by member and structure approaches
4. Solve simple boundary value problems
5. Understand the basics of finite element method.

COURSE OBJECTIVES:
- To introduce the fundamentals of elasticity
- To familiarise the students with the equations of elasticity
- To train the students for solving 2D problems of elasticity
- To enable the students solve torsion problems in bars and thin tubes
- To provide a basic understanding of plasticity

Introduction to Elasticity
Displacement, Strain and Stress Fields, Constitutive Relations, Cartesian Tensors and Equations of Elasticity. Strain and Stress Field: Elementary Concept of Strain, Stain at a Point, Principal Strains and Principal Axes, Compatibility Conditions, Stress at a Point, Stress Components on an Arbitrary Plane, Differential Equations of Equilibrium, Hydrostatic and Deviatoric Components.

Equations of Elasticity
Equations of Equilibrium, Stress-Strain relations, Strain Displacement and Compatibility Relations, Boundary Value Problems, Co-axiality of the Principal Directions.

Two-Dimensional Problems of Elasticity

Torsion of Prismatic Bars
Saint Venant’s Method, Prandtl’s Membrane Analogy, Torsion of Rectangular Bar and Torsion of Thin Tubes.

Plastic Deformation

REFERENCES:

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Understand the fundamentals of elasticity
2. Apply the equations of elasticity
3. Solve 2D problems of elasticity
4. Solve torsion problems in bars and thin tubes
5. Understand the basics of plasticity.

COURSE OBJECTIVES:
- To train the students towards identifying research problems
- To familiarise the students with technical paper and research proposal writing
- To familiarise the students with patenting
- To make the students understand the patent rights
- To familiarise the students with new developments in IPR

Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Identify good research problems
2. Write sound technical papers and research proposals
3. Understand the concepts of patenting
4. Understand the patent rights
5. Utilise the new developments in IPR

COURSE OBJECTIVES:
- To introduce the fundamentals of structural analysis, design and detailing
- To familiarise the students with the analysis of symmetrical building frames subjected to gravity loading, wind loading and seismic loading using STADD PRO software
• To familiarise the students with the analysis of unsymmetrical building frames subjected to gravity loading, wind loading and seismic loading using STADD PRO software.
• To familiarise the students with the analysis of symmetrical building frames subjected to gravity loading, wind loading and seismic loading using ETABS software.
• To familiarise the students with the analysis of unsymmetrical building frames subjected to gravity loading, wind loading and seismic loading using ETABS software.

LIST OF EXPERIMENTS:
1. Analysis of Symmetrical Building Frames (Gravity load only) uses STADD PRO Software.
2. Analysis of Symmetrical Building Frames (Wind load only) using STADD PRO Software.
3. Analysis of Symmetrical Building Frames (Earthquake load only) using STADD PRO Software.
4. Analysis of Un-Symmetrical Building Frames (Gravity load only) using STADD PRO Software.
5. Analysis of Un-Symmetrical Building Frames (Wind load only) using STADD PRO Software.
6. Analysis of Un-Symmetrical Building Frames (Earthquake load only) using STADD PRO Software.
7. Analysis of Symmetrical Building Frames (Gravity load only) using Etabs Software.
8. Analysis of Symmetrical Building Frames (Wind load only) using Etabs Software.
9. Analysis of Symmetrical Building Frames (Earthquake load only) using Etabs Software.
10. Analysis of Un-Symmetrical Building Frames (Gravity load only) using Etabs Software.
11. Analysis of Un-Symmetrical Building Frames (Wind load only) using Etabs Software.
12. Analysis of Un-Symmetrical Building Frames (Earthquake load only) using Etabs Software.

REFERENCES:
2. IS 13920:1993, Ductile Detailing of Reinforced Concrete Structures subjected to Seismic Forces, BIS, New Delhi.

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Understand the codal provisions relating to structural design and detailing.
2. Analyse symmetrical building frames subjected to gravity loading, wind loading and seismic loading using STADD PRO software.
3. Analyse unsymmetrical building frames subjected to gravity loading, wind loading and seismic loading using STADD PRO software.
4. Analyse symmetrical building frames subjected to gravity loading, wind loading and seismic loading using ETABS software.
5. Analyse unsymmetrical building frames subjected to gravity loading, wind loading and seismic loading using ETABS software.
COURSE OBJECTIVES:

- To introduce the fundamentals of concrete mix design
- To familiarise the students with Stress - Strain Curves for concrete and Reinforcing Steel
- To make the students understand the flexural behaviour of RC Beams
- To make the students understand the shear behaviour of RC beams
- To familiarise the students with non-destructive testing on concrete elements

LIST OF EXPERIMENTS

1. Concrete Mix Design - IS and ACI Methods
2. Study of Stress - Strain Curve for concrete
3. Study of Stress - Strain Curve for Reinforcing Steel
4. Flexure Test on RC Beam
5. Shear Test on RC Beam
6. Study on Rolled Steel Joist
7. Bending Test on Steel Flat
8. Non-destructive Testing

REFERENCES:

3. IS 10262:2019, Recommended Guidelines for Concrete Mix Design, BIS, New Delhi
4. IS 13920:1993, Ductile Detailing of Reinforced Concrete Structures subjected to Seismic Forces, BIS, New Delhi
5. SP 34:1987, Handbook on Concrete Reinforcement and Detailing, BIS, New Delhi.

COURSE OUTCOMES:

At the end of the course, the student will be able to:

1. Understand the fundamentals of concrete mix design
2. Design concrete mixes using national and international codes of practice
3. Understand the flexural behaviour of RC beams
4. Understand the shear behaviour of RC beams
5. Conduct non-destructive testing on concrete elements.

COURSE OBJECTIVES:
- To introduce the fundamentals of numerical methods
- To familiarise the students with Eigen value problems
- To train the students for solving ordinary and partial differential equations
- To provide the students with a background of finite difference scheme
- To enable the students write computer programs for solving mathematical problems

**Introduction**

**Beam Elements**
Flexure Element, Element Stiffness Matrix, Element Load Vector.

**Method of Weighted Residuals**

**Application to Solid Mechanics**
Plane Stress, CST Element, Plane Strain Rectangular Element, Iso-parametric Formulation of the Plane Quadrilateral Element, Axi- Symmetric Stress Analysis, Strain and Stress Computations.

**Computer Implementation** of FEM procedure, Pre-Processing, Solution, Post-Processing, Use of Commercial FEA Software.
REFERENCES:

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Understand the fundamentals of numerical methods
2. Solve Eigen Value problems
3. Solve ordinary and partial differential equations
4. Understand the finite difference schemes
5. Solve numerically different structural problems

COURSE OBJECTIVES:
- To provide an information about Vibration Analysis and Mathematical Modeling.
- To know about numerical solution and its methods.
- To study about dynamics response of SDOF system using fundamental theory and equation of motion.
- To study about dynamics response of MDOF system using fundamental theory and equation of motion.
- To learn about the available software for dynamic analysis.

Introduction

Numerical Solution
Multiple Degree of Freedom System (Lumped parameter)
   Two Degree of Freedom System, Multiple Degree of Freedom System, Inverse Iteration
   Method for Determination of Natural Frequencies and Mode Shapes, Dynamic Response by Modal
   Superposition Method, Direct Integration of Equation of Motion.

Multiple Degree of Freedom System (Distributed Mass and Load)
   Single Span Beams, Free and Forced Vibration, Generalized Single Degree of Freedom
   System.

Special Topics in Structural Dynamics (Concepts only)
   Dynamic Effects of Wind Loading, Moving Loads, Vibrations caused by Traffic, Blasting and
   Pile Driving, Foundations for Industrial Machinery, Base Isolation.

REFERENCES:
   3. Smith J. W., Vibration of Structures - Application in Civil Engineering Design, Chapman and
      Hall.
   6. Hart and Wong, Dynamics of Structures.

COURSE OUTCOMES:
   At the end of the course, the student will be able to:
   1. Understand vibration Analysis and Mathematical Modeling.
   2. Evaluate numerical solution and its methods.
   3. Analyze dynamics response of SDOF system using fundamental theory and equation of
      motion.
   4. Analyze dynamics response of MDOF system using fundamental theory and equation of
      motion.
   5. Use the available software for dynamic analysis.

COURSE OBJECTIVES:
- To learn about response of structures
- To prepare a model for testing
- To test structural models under static condition.
- To test structural models under dynamic condition.
- To evaluate dynamic modulus

LIST OF EXPERIMENTS:
1. Model Analysis – Continuous beam.
3. Model Analysis – Plate.
4. Free vibration analysis of wooden cantilever beam model.
5. Free vibration analysis of steel cantilever beam model.
6. Free vibration analysis of aluminum cantilever beam model.
7. Free vibration analysis of glass cantilever beam model.
8. Determination of viscous damping co-efficient for wooden beam model.
9. Determination of viscous damping co-efficient for steel beam model.
10. Determination of viscous damping co-efficient for aluminum beam model.
11. Determination of viscous damping co-efficient for glass beam model.
12. Free vibration Analysis of Simply Supported Steel Beam model.
13. Forced vibration Analysis of Simply Supported Steel Beam model.

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Understand the response of structures.
2. Prepare the models.
3. Conduct model testing for static loading.
4. Conduct model testing for free and forced vibrations.
5. Evaluation of dynamic modulus.

COURSE OBJECTIVES:
1. To determine structural engineering problems reviewing available literature.
2. To Study about different techniques used to analyze complex structural systems.
3. To compare the solutions given and present solution by using his/her technique applying engineering principles.
4. To Understand of contemporary / emerging technology.

Share knowledge effectively in oral and written form and formulate documents. The students will individually undertake a training program in reputed concerns in the field of structural engineering field during vacation period for a minimum stipulated period of four weeks. At the end of the commencement of the third semester for Full Time / fifth semester for Part Time. The student will be evaluated by a team of staff members nominated by the Head of the Department through a viva-voce examination.

Mini Project will have mid semester presentation and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available.

End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining solutions highlighting individuals’ contribution.

Continuous assessment of Mini Project at Mid Sem and End Sem will be monitored by the departmental committee.

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Identify structural engineering problems reviewing available literature.
2. Study different techniques used to analyze complex structural systems.
3. Work on the solutions given and present solution by using his/her technique applying engineering principles.
4. Understand of contemporary / emerging technology.
5. Share knowledge effectively in oral and written form and formulate documents.

COURSE OBJECTIVES:
- To prepare the final report of project work in standard format.
- To use knowledge and skills previously gained and applied to an in-depth study and execution of new technical problem.
- To learn about different methodologies, methods and forms of analysis to produce a suitable research design and justify their design.
- To manipulate the findings of their technical solution in a written report.
- To present the work in International/National conference or reputed journals.

The students will individually undertake a research problems in the field of Structural Engineering in the third semester for Full Time / Fifth semester for Part Tim. The student will be guided by a staff member. The progress of the research will be evaluated every month by a team of staff members. The student has to submit the detailed report on the research problem at the end of the third semester for Full Time / fifth semester for Part Time.. The student will be evaluated by a team of staff members nominated by the Head of the Department through a viva-voce examination.

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Prepare the final report of project work in standard format for satisfactory completion of the work.
2. Synthesize knowledge and skills previously gained and applied to an in-depth study and execution of new technical problem.
3. Select a technique from different methodologies, methods and forms of analysis to produce a suitable research design and justify their design.
4. Present the findings of their technical solution in a written report.
5. Make the presentation of their work in International/National conference or reputed journals.

COURSE OBJECTIVES:
- To provide students with a rational basis for the analysis and design of thin plates.
- To provide students with a rational basis for the analysis and design of thin shells.

Introduction:

Static Analysis of Plates:
- Governing Equation for a Rectangular Plate, Navier Solution for simply- Supported Rectangular Plate under Various Loadings, Levy solution for Rectangular Plate with other Boundary Conditions.

Circular Plates:

Static Analysis of Shells:
- Membrane Theory of Shells - Cylindrical, Conical and Spherical Shells,

Shells of Revolution:
- with Bending Resistance- Cylindrical and Conical Shells, Application to Pipes and Pressure Vessels - Thermal Stresses in Plate/ Shell

REFERENCES:
2. Ugural Ansel C., Stresses in Plates and Shells, McGraw Hill.

COURSE OUTCOMES:
- At the end of the course, students will be able to
  1. Understand the basic concept of plates and shells.
  2. Use analytical methods for the solution of thin plates.
  3. Use analytical methods for the solution of shells.
  4. Apply the numerical techniques and tools for the complex problems in thin plates.
  5. Apply the numerical techniques and tools for the complex problems in shells.

## Course Objectives:

- To familiarize the students with the mechanical properties and application of cement composites.
- To obtain the students for analysis and designing cement composite structural elements.

## Introduction:

## Mechanical Behaviour:

## Cement Composites:

Types of Cement Composites, Terminology, Constituent Materials and their Properties, Construction Techniques for Fibre Reinforced Concrete - Ferro-cement, SIFCON, Polymer Concretes, Preparation of Reinforcement, Casting and Curing.

## Mechanical Properties of Cement Composites:

Behavior of Ferro-cement, Fiber Reinforced Concrete in Tension, Compression, Flexure, Shear, Fatigue and Impact, Durability and Corrosion.

## Application of Cement Composites:

REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Formulate constitutive behaviour of composite materials – Ferro-cement, SIFCON and Fibre Reinforced Concrete - by understanding their strain-stress behaviour.
2. Classify the materials as per orthotropic and anisotropic behaviour.
3. Estimate strain constants using theories applicable to composite materials.
4. Analyse and design structural elements made of cement composites.
5. Gain the knowledge about composite materials.

COURSE OBJECTIVES:
- To provide knowledge regarding the stability analysis of columns and frames.
- To make the students understand the concept of inelastic stability.

Criteria for Design of Structures:

Stability of Columns:
- Axial and Flexural Buckling, Lateral Bracing of Columns, Combined Axial, Flexural and Torsion Buckling.

Stability of Frames:
- Member Buckling versus Global Buckling, Slenderness Ratio of Frame Members.

Stability of Beams: lateral torsion buckling.
Stability of Plates:
Axial flexural buckling, shear flexural buckling, buckling under combined loads - Introduction to Inelastic Buckling and Dynamic Stability.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Understand the criteria for design of structures.
2. Determine stability of columns.
3. Determine stability of frames.
4. Determine stability of beams and plates
5. Use stability criteria and concepts for analysing discrete and continuous systems.

COURSE OBJECTIVES:
- To familiarise the students with numerical methods applicable to structural engineering problems.
- To train them for writing computer programs for solving a mathematical problems.

Fundamentals of Numerical Methods:
- Error Analysis, Polynomial Approximations and Interpolations, Curve Fitting; Interpolation and extrapolation.

Solution of Nonlinear Algebraic and Transcendental Equations –
- Elements of Matrix Algebra: Solution of Systems of Linear Equations, Eigen Value Problems.

Numerical Differentiation & Integration:
- Solution of Ordinary and Partial Differential Equations.

Finite Difference scheme: Implicit & Explicit scheme.
Computer Algorithms:
Numerical Solutions for Different Structural Problems, Fuzzy Logic and Neural Network.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Solve ordinary and partial differential equations in structural mechanics using numerical methods.
2. Gain the knowledge about the solution of nonlinear equations.
3. Understand the solution of differential equations.
4. Solve the problems using finite difference scheme.
5. Write a program to solve a mathematical problem using software.

COURSE OBJECTIVES:
- To make the students understand the importance of SHM.
- To introduce various testing procedures and repair strategies.

Structural Health:
Factors affecting Health of Structures, Causes of Distress and Regular Maintenance -

Structural Audit:
Assessment of Health of Structure, Collapse and Investigation, Investigation Management, SHM Procedures.

Static Field Testing:
Types of Static Tests, Simulation and Loading Methods, sensor systems and hardware requirements, Static Response Measurement.
Dynamic Field Testing:
Types of Dynamic Field Test, Stress History Data, Dynamic Response Methods, Hardware for Remote Data Acquisition Systems, Remote Structural Health Monitoring.

Introduction to Repairs and Rehabilitations of Structures:
Case Studies (Site Visits), piezo–electric materials and other smart materials, electro–mechanical impedance (EMI) technique, adaptations of EMI technique.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Diagnosis the distress in the structure understanding the causes and factors.
2. Assess the health of structure using static field methods.
3. Assess the health of structure using dynamic field tests.
4. Suggest repairs and rehabilitation measures of the structure
5. Understand the structures monitoring based on strength using different types of methods.

COURSE OBJECTIVES:
- To provide the basic knowledge regarding linear optimization methods.
- To provide the basic knowledge regarding non-linear optimization methods.

Calculus of Variation: Variational Principles with Constraints,
Geometric Programming and Stochastic Programming.

Applications: Structural Steel and Concrete Members, Trusses and Frames - Design: Frequency Constraint, Design of Layouts.

REFERENCES:
2. Cherkáev Andrej, Variational methods for Structural optimization, Springer

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Solve the classical external problems
2. Use Variational principle for optimization
3. Develop the linear programming
4. Apply optimization techniques to structural steel and concrete members.
5. Design using frequency constraint.

COURSE OBJECTIVES:
- To enable the students design of steel structures.
- To make the students understand height concept of stability.

Properties of Steel:
Mechanical Properties, Hysteresis, Ductility- Hot Rolled Sections: compactness and non-compactness, slenderness, residual stresses.

Design of Steel Structures:
Inelastic Bending Curvature, Plastic Moments, Design Criteria Stability, Strength, Drift.

Stability of Beams:
Local Buckling of Compression Flange &Web, Lateral Torsional Buckling - Stability of Columns: Slenderness Ratio, Local Buckling of Flanges and Web, Bracing of Column about Weak Axis.
Method of Designs:

Connections:
Welded, Bolted, Location Beam Column, Column Foundation, Splices.

COURSE OBJECTIVES:
- To provide the basic concepts understand the design of form work.
- To familiarise the students with deferent types of form work.
Introduction:

Formwork Design:

Formwork Design for Special Structures:
Shells, Domes, Folded Plates, Overhead Water Tanks, Natural Draft Cooling Tower, Bridges.

Flying Formwork:
Table Form, Tunnel Form, Slip Form, Formwork for Precast Concrete, Formwork Management Issues –Pre- and Post-Award.

Formwork Failures:
Causes and Case studies in Formwork Failure, Formwork Issues in Multi-Story Building Construction.

REFERENCES:
3. IS 14687: 1999, False work for Concrete Structures - Guidelines, BIS.

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Select proper formwork, accessories and material.
2. Design the form work for Beams, Slabs, columns, Walls and Foundations.
3. Design the form work for Special Structures.
4. Understand the working of flying formwork.
5. Judge the formwork failures through case studies.

COURSE OBJECTIVES:

- To make the students understand the design procedure for towers and chimneys.
- To provide the fundamental information pertinent to tall buildings.

**Design of transmission/ TV tower, Mast and trestles:** Configuration, bracing system, analysis and design for vertical transverse and longitudinal loads.

**Analysis and Design of RC and Steel Chimney:** Foundation design for varied soil strata.

**Tall Buildings:** Structural Concept, Configurations, various systems, Wind and Seismic loads, Dynamic approach, structural design considerations and IS code provisions.

**Firefighting:** Design provisions.

**Application** of software in analysis and design.

REFERENCES:

5. Smith Byran S. and Coull Alex, Tall Building Structures, Wiley India. 1991.

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Analyse, design and detail Transmission/ TV tower, Mast and Trestles with different loading conditions.
2. Analyse, design and detail the RC and Steel Chimney.
3. Analyse, design and detail the tall buildings subjected to different loading conditions using relevant codes.
4. Design and detail the tall buildings subjected to firefighting provision using relevant codes.
5. Analyse and design the tall buildings using relevant software.

COURSE OBJECTIVES:
- To familiarise the students with design approaches to masonry structures.
- To enable the students analyse reinforced masonry members.

Introduction:
Historical Perspective, Masonry Materials, Masonry Design Approaches, Overview of Load Conditions, Compression Behaviour of Masonry, Masonry Wall Configurations, Distribution of Lateral Forces.

Flexural Strength of Reinforced Masonry Members:
In plane and Out-of-plane loading - Interactions: Structural Wall, Columns and Pilasters, Retaining Wall, Pier and Foundation.

Shear Strength and Ductility of Reinforced Masonry Members.

Prestressed Masonry:
Stability of Walls, Coupling of Masonry Walls, Openings, Columns, Beams.

REFERENCES:
1. Narendra Taly, Design of Reinforced Masonry Structures, ICC, 2nd Edn,

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Understand the masonry design approaches.
2. Analyse Reinforced Masonry Members.
3. Determine interactions between members.
4. Determine shear strength and ductility of Reinforced Masonry members.
5. Check the stability of walls and Perform elastic and inelastic analysis of walls.

COURSE OBJECTIVES:
- To provide knowledge on the design of shear wall structures.
- To familiarise the students with national and international code provisions.

Deflection and crack width – estimation based on IS 456, BS 8110, EC and ACI method.
Redistribution of moments in RC beams – Condition for moment redistribution – moment redistribution in fixed beam and two span continuous beam – Advantages
Design of deep beams, spandrel beams – Analysis of grid floors.
Analysis, design and detailing of shear walls.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to:
1. Determine the deflection and crack width of flexural members using code provisions.
2. Understand the redistribution moments in R. C. Beams.
3. Design the deep beams as per relevant codes.
4. Analyse the special structures by understanding their behaviour.
5. Design and prepare detail structural drawings for execution citing relevant IS codes.

COURSE OBJECTIVES:

- To provide the knowledge relating to shallow foundations.
- To enable the students analyse and design deep foundations.

Planning of Soil Exploration for Different Projects, Methods of Subsurface Exploration, Methods of Borings along with Various Penetration Tests.

Open Cuts, Sheeting and Bracing Systems in Shallow and Deep Open Cuts in Different Soil Types - Coffer Dams, Various Types, Analysis and Design, Foundations under uplifting loads, Soil-structure interaction

REFERENCE BOOKS:

1. N.P. Kurian, Design of foundation system, Narosa Publishing House

COURSE OUTCOMES:

At the end of the course, students will be able to:

1. Understand the knowledge about planning of soil exploration.
2. Design the shallow foundations for construction engineering structures
3. Design the pile foundations for construction engineering structure
4. Design the well foundations for construction engineering structures
5. Understand the knowledge about open cuts in different soils.

COURSE OBJECTIVES:

- To provide the basic concepts underlying soil structure interaction.
- To enable the students evaluate soil structure interaction for different types of structures.

Preparation of Comprehensive Design Oriented Computer Programs for Specific Problems, Interaction Problems based on Theory of Sub Grade Reaction Such as Beams, Footings, Rafts Etc.

Analysis of Different Types of Frame Structures Founded on Stratified Natural Deposits with Linear and Non-Linear Stress-Strain Characteristics.

Determination of Pile Capacities and Negative Skin Friction, Action of Group of Piles Considering Stress-Strain Characteristics of Real Soils, Anchor Piles and Determination of Pull-out Resistance.

REFERENCES:

COURSE OUTCOMES:

At the end of the course, students will be able to

1. Understand soil structure interaction concept and complexities involved.
2. Evaluate soil structure interaction for different types of structure under various conditions of loading and subsoil characteristics.
3. Prepare comprehensive design oriented computer programs for interaction problems based on theory of sub grade reaction such as beams, footings, rafts etc.
4. Analyze different types of frame structure founded on stratified natural deposits with linear and non-linear stress-strain characteristics.
5. Evaluate action of group of piles considering stress-strain characteristics of real soils.
COURSE OBJECTIVES:
- To provide design procedures for steel portal and gable frames.
- To provide design procedures for chimneys and storage structures.

Steel Gantry Girders
Introduction, loads acting on gantry girder, permissible stress, types of gantry girders and crane rails, crane data, maximum moments and shears, construction detail, design procedure - Portal Frames– Design of portal frame with hinge base, design of portal frame with fixed base - Gable Structures – Lightweight Structures

Steel Bunkers and Silos

Chimneys
Introduction, dimensions of steel stacks, chimney lining, breech openings and access ladder, loading and load combinations, design considerations, stability consideration, design of base plate, design of foundation bolts, design of foundation.

Water Tanks

Design of prestressed steel water tank

REFERENCES:
3. Subramanian, Design of Steel Structures.
COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Design Steel Gantry Girders.
2. Design Steel Portal, Gable Frames.
3. Design Steel Bunkers and Silos.
4. Design Chimneys and Water Tanks.
5. Design prestressed steel water tank.

COURSE OBJECTIVES:
- To train the students for analysing PSC members.
- To train the students for designing PSC members.

Introduction to prestressed concrete: Types of prestressing, systems and devices, materials, losses in prestress. Analysis of PSC flexural members: basic concepts, stresses at transfer and service loads, ultimate strength in flexure, code provisions.

Statically determinate PSC beams: Design for ultimate and serviceability limit states for flexure, analysis and design for shear and torsion, code provisions.

Transmission of prestress in pretensioned members; Anchorage zone stresses for post-tensioned members - Analysis and design of prestressed concrete pipes, columns with moments.

Statically indeterminate structures - Analysis and design - continuous beams and frames, choice of cable profile, linear transformation and concordancy.

Composite construction with precast PSC beams and cast in-situ RC slab - Analysis and design, creep and shrinkage effects. Partial prestressing - principles, analysis and design concepts, crack width calculations.

REFERENCES:
4. IS: 1343- Code of Practice for Prestressed Concrete
5. IRC: 112

**COURSE OUTCOMES:**
At the end of the course, students will be able to
1. Find out losses in the prestressed concrete. Understand the basic aspects of prestressed concrete fundamentals, including pre and post-tensioning processes.
2. Analyse and design the prestressed concrete beams.
3. Analyse and design of prestressed concrete pipes and columns
4. Analyse and design the deck slab and beam/girders.
5. Analyse and design the composite prestressed concrete members.

**COURSE OBJECTIVES:**
- To enable the students analyse composite plates using FEM.
- To train the students for developing computer programs towards the analysis of composite.

**Introduction:** Displacement Field Approximations for Classical Laminated Plate Theory (CLPT)and First Order Shear Deformation Theory (FSDT), Analytical Solutions for Bending Of Rectangular Laminated Plates using CLPT.

**Governing Equations** Navier Solutions of Cross-Ply and Angle-Ply Laminated Simply-Supported Plates, Determination of Stresses. Levy Solutions for Plates with Other Boundary Conditions, Analytical Solutions for Bending of Rectangular Laminated Plates Using FSDT.

**Finite Element Model,** C0Element Formulation, Post Computation of Stresses - Analysis of Rectangular Composite Plates using Analytical Methods.
REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Analyse the rectangular composite plates using the analytical methods.
2. Determine the analytical solutions for bending of laminated plates using FSTP.
3. Analyse the composite plates using advanced finite element method.
4. Gain the knowledge about the laminated composite plates.
5. Develop the computer programs for the analysis of composite plates.

COURSE OBJECTIVES:
- To enable the students identify cracking of concrete members based on fracture mechanics.
- To enable the students apply FM model to HSC and FRC structures.

Introduction: Basic Fracture Mechanics, Crack in a Structure, Mechanisms of Fracture and Crack Growth, Cleavage Fracture, Ductile Fracture, Fatigue Cracking, Environment assisted Cracking, Service Failure Analysis.

Stress at Crack Tip: Stress at Crack Tip, Linear Elastic Fracture Mechanics, Griffith’s Criteria, Stress Intensity Factors, Crack Tip Plastic Zone, Erwin’s Plastic Zone Correction, R curves, Compliance, J Integral, Concept of CTOD and CMD.

Material Models: General Concepts, Crack Models, Band Models, Models based on Continuum Damage Mechanics, Applications to High Strength Concrete.

Fibre Reinforced Concrete, Crack Concepts and Numerical Modeling.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Identify and classify cracking of concrete structures based on fracture mechanics.
2. Implement stress intensity factor for notched members
3. Apply fracture mechanics models to high strength concrete and FRC structures.
4. Compute J-integral for various sections understanding the concepts of LEFM.
5. Gain the knowledge about the fracture mechanics of concrete structures.

COURSE OBJECTIVES:
• To equip the students with analysis and design procedures for folded plate structures.
• To equip the students with analysis and design procedures for folded shell structures.

Prismatic folded Plate Systems – Types - Assumptions – Boundary condition- Kirchoffs boundary condition.
Differential equation for bending of shells- Cylindrical bending of UDL of circular shell- simply supported – built –in-edges – small deflection theory of laterally loaded.
REFERENCES:

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Analyse and design the folded plate systems.
2. Develop the shell equation for folded plates
3. Develop the approximate solutions for folded plates.
4. Analyse and design the cylindrical shells.
5. Analyse and design the double cylindrical shells.

OPEN ELECTIVES

COURSE OBJECTIVE:
- Understand the role of business analytics within an organization.
- Analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization.
- To gain an understanding of how managers use business analytics to formulate and solve business problems and to support managerial decision making.
- To become familiar with processes needed to develop, report, and analyze business data.
- Use decision-making tools/Operations research techniques.
- Mange business process using analytical and management tools.
- Analyze and solve problems from different industries such as manufacturing, service, retail, software, banking and finance, sports, pharmaceutical, aerospace etc.

Business analytics:

Trendiness and Regression Analysis:

Organization Structures of Business analytics:
- Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predicative Modelling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization.

Forecasting Techniques:

Decision Analysis:
- Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, the Value of Information, Utility and Decision Making.
- Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

REFERENCES:
2. James Evans, Business Analytics, persons Education.

COURSE OUTCOMES:
At the end of the course, students will be able to
1. Students will demonstrate knowledge of data analytics.
2. Students will demonstrate the ability of think critically in making decisions based on data and deep analytics.
3. Students will demonstrate the ability to use technical skills in predicative and prescriptive modelling to support business decision-making.
4. Students will demonstrate the ability to translate data into clear, actionable insights.
5. To become familiar with processes needed to develop, report and analyses business data.

COURSE OBJECTIVES:
• To make the students understand the importance of maintenance.
• To make the students understand the importance of safety.

Industrial safety:
Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc, Safety color codes. Fire prevention and firefighting, equipment and methods.

Fundamentals of maintenance engineering:
Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

Wear and Corrosion and their prevention:
Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii.

Fault tracing:
Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment’s like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

Periodic and preventive maintenance:

REFERENCES:

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Apply safety practices.
2. Inspect maintenance operations.
3. Trace faults in equipments.
4. Do event tree and fault tree analyse
5. Understand the concept and importance of repair recycle.

Mapping Course Outcomes(Cos)with Programme Outcomes (Pos)
COURSE OBJECTIVES:

- To enable the students apply the concept of non-linear programming.
- To train the students for carrying out sensitivity analysis.

Optimization Techniques, Model Formulation, models, General L.R. Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models

Formulation of a LPP - Graphical solution revised simplex method - duality theory - dual simplex method - sensitivity analysis - parametric programming

Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem - max flow problem - CPM/PERT

Scheduling and sequencing - single server and multiple server models - deterministic inventory models - Probabilistic inventory control models - Geometric Programming.

Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation

REFERENCES:

COURSE OUTCOMES:

At the end of the course, the student will be able to:

1. Apply the dynamic programming to solve problems of discrete and continuous variables.
2. Apply the concept of non-linear programming
3. Carry out sensitivity analysis
4. Model the real world problem and simulate it.
5. Understand the concept and importance of scheduling and sequencing.

Mapping Course Outcomes (Cos) with Programme Outcomes (Pos)
COURSE OBJECTIVES:
- To introduce the strategic cost management processes.
- To familiarise the students with various quantitative techniques for cost managements.

Introduction and Overview of the Strategic Cost Management Process
Cost concepts in decision-making; relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System; Inventory valuation; Creation of a Database for operational control; Provision of data for Decision-Making.

Project:
Meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and non technical activities. Detailed Engineering activities. Pre project execution main clearances and documents

Project team:
Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process

Cost Behavior and Profit Planning Marginal Costing:

Budgetary Control:

REFERENCES:
1. Cost Accounting A Managerial Emphasis, Prentice Hall of India, New Delhi
2. Charles T. Horngren and George Foster, Advanced Management Accounting
3. Robert S Kaplan Anthony A. Alkinson, Management & Cost Accounting
5. N.D. Vohra, Quantitative Techniques in Management, Tata McGraw Hill Book Co. Ltd.

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Understand cost accounting knowledge, such as terminology and fundamental principles and methods.
2. Plan project execution.
3. Plan project cost control.
4. Apply TQM practices.
5. Apply course material to new situations.

### COURSE OBJECTIVES:
- To familiarise the students with the constituents of composite materials.
- To train the students in designing with composite materials.

### INTRODUCTION:

### REINFORCEMENTS:

### Manufacturing of Metal Matrix Composites:

### Manufacturing of Polymer Matrix Composites:

### Strength:
Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygro thermal failure. Laminate first play failure-insight strength; Laminate
strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Understand mechanical behavior of composites.
2. Familiar with manufacturing of polymer matrix composites.
3. Do the design with composites.
4. Know about the manufacturing of metal matrix composites.
5. Determine stresses and strains relation in composite materials.

COURSE OBJECTIVES:
- To make understand the recycling and reuse of waste.
- To familiarise the students with biomass technology.

Introduction to Energy from Waste:
Classification of waste as fuel – Agro based, Forest residue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors
Biomass Pyrolysis:
Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods -Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

Biomass Gasification:

Biomass Combustion:
Biomass stoves – Improved chullahs, types, some exotic designs, fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design, construction and operation - Operation of all the above biomass combustors.

Biogas:
Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features - Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion -biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion -Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production -Urban waste to energy conversion - Biomass energy programme in India.

REFERENCES:

COURSE OUTCOMES:
At the end of the course, the student will be able to:
1. Understand the concept of harnessing energy from waste.
2. Know the design, construction and operation of biomass gasifiers.
3. Come know about bio diesel, its production and applications.
5. Gain knowledge about Biogas.

AUDIT COURSES

COURSE OBJECTIVES:

- Understand that how to improve your writing skills and level of readability
- Learn about what to write in each section
- Understand the skills needed when writing a Title

Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

key skills are needed when writing a Title, key skills are needed when writing an Abstract, skills are needed when writing an Introduction, skills needed when writing a Review of the Literature,

skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions.

useful phrases, how to ensure paper is as good as it could possibly be the first-time submission.

REFERENCES:

COURSE OUTCOMES:

At the end of the course, Students will be able to

1. Understand that how to improve your writing skills and level of readability
2. Learn about what to write in each section.
3. Understand the skills needed when writing a Title.
4. Understand the skills when writing the discussion
5. Ensure the good quality of paper at very first-time submission.

COURSE OBJECTIVES:

- Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and Humanitarian response.
- Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work.

Repercussions of Disasters And Hazards:

Disaster Prone Areas In India:

Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics

Disaster Preparedness and Management:

Preparedness: Monitoring Of Phenomena Triggering A Disaster Or Hazard; Evaluation Of Risk: Application Of Remote Sensing, Data From Meteorological And Other Agencies, Media Reports: Governmental And Community Preparedness.

Risk Assessment:

Disaster Mitigation:

Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs Of Disaster Mitigation in India.

COURSE OBJECTIVES:
- To get a working knowledge in illustrious Sanskrit, the scientific language in the world.
- Learning of Sanskrit to improve brain functioning.
- Learning of Sanskrit to develop the logic in mathematics, science & other subjects enhancing the memory power.
- The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature.

Alphabets in Sanskrit - Past/Present/Future Tense - Simple Sentences
Order - Introduction of roots - Technical information about Sanskrit Literature
Technical concepts of Engineering-Electrical, Mechanical - Architecture, Mathematics
